Cornwallis had great advantages over Warren Hastings, who had been thwarted and interfered with by his council, for he was enabled to act, under the new arrangements of Pitt and Dundas, in all cases of emergency in direct opposition to the opinion of his council. Yet he had great difficulties; the revenue was badly collected, the civil servants were flagrantly corrupt, and while the princes within the power of the company's officials were pillaged, the independent princes were shaken in their opinion of English invincibility by the events of the second Mysore war. Cornwallis's first task was to examine into the corruption of the civil servants. He soon discovered that it was hopeless to remedy the mischief without radical reforms, and in a despatch full of wisdom (*ib.* i. 266–8) he announced to the directors that he had rearranged the salaries of the collectors on such a scale that they should not have to resort to peculation in order to obtain adequate incomes. Cornwallis's reforms in the military forces of the company were of hardly less importance than those of the civil service. The utter inefficiency of the company's European troops, as compared with the king's troops, had caused the promulgation of a scheme for consolidating them into one royal army, obeying the king's regulations; but the dislike felt by officers in the company's service to entering the royal army prevented them from helping in this consolidation, which was never carried into effect. The best company's officers were all employed with native troops, and were hardly likely to abandon their chances of the colonelcy of a sepoy regiment, with from 7,000*l* to 8,000*l*. a year, in order to become officers in the king's service, where promotion was governed by political interest (*ib.* i. 333). Though he had to abandon this scheme, Cornwallis never ceased to demand more English regiments from home, and he urged the despatch of more regiments from England, and the gradual decrease of the company's Europeans without insisting upon the scheme of consolidation. These labours of reform in the civil and military services and his ceaseless war against jobs of all sorts fully occupied the time of Cornwallis for the first three years of his Indian government; but a storm was gathering in the south which threatened the English power.

The letters of the governor-general at this time to his only son, Lord Brome, then a boy at school, are worth a notice, as showing the simple loving nature of the man. 'You must write to me by every opportunity,' he tells his son on 17 Sept. 1786, 'and longer letters than I write to you; for I have a great deal more business every day than you have on a whole school day, and I never get a holiday. I have rode once upon an elephant, but it is so like going in a cart, that you would not think it very agreeable' (*ib.* i. 218). Again he writes to Lord Brome on 28 Dec. 1786: 'You will have heard that soon after I left England I was elected a knight of the Garter, and very likely laughed at me for wishing to wear a blue riband over my fat belly. . . . But I can assure you upon my honour that I neither asked for it nor wished for it. The reasonable object of ambition to a man is to have his name transmitted to posterity for eminent services rendered to his country and to mankind. Nobody asks or cares whether Hampden, Marlborough, Pelham, or Wolfe were knights of the Garter. Of all things at present I am most anxious to hear about you. The packet that was coming to us overland, and that left England in July, was cut off by the wild Arabs between Aleppo and Bussora' (*ib.* i. 236).

The outbreak of the third Mysore war for a time stopped the progress of Cornwallis's peaceful reform in Bengal. The Madras government was weak and corrupt, and after the retirement of Sir Archibald Campbell (1739–1791) [q. v.] the utter neglect of all precautions emboldened Tippoo Sultan in 1790 to attack a faithful ally of England, the Rajah of Travancore. In the first campaign of the war Cornwallis left the command of the troops to General Medows, the new commander-in-chief at Madras, but the failure of that general to do anything but capture Coimbatore made it necessary for Cornwallis to proceed himself to Madras, and to take command of the troops on 12 Dec. 1790. The campaign of 1791 was not one of a paramount importance, but every movement in it and every siege undertaken were necessary for the completion of the great end Cornwallis proposed to himself, the capture of Seringapatam and final overthrow of Tippoo's power. On 7 March the pettah, and on 21 March the citadel, of Bangalore were stormed, and on 13 May Cornwallis reached Arikera, within nine miles of Seringapatam itself. But it was too late in the season to undertake a great siege; Cornwallis did not know where the Mahrattas or Robert Abercromby's force from the west coast were, and therefore, after defeating Tippoo on the 15th, he destroyed his battering train and heavy baggage, and commenced his retreat to Bangalore. Hardly had he retired when he was joined by Hurry Punt and the Mahratta cavalry, and he immediately planned out a great campaign for the following year. His political ability was shown in the manner in which he obtained the

help of both the Nizam and the Mahrattas, and thus isolated Tippoo. In securing these alliances he was materially assisted by the residents at the courts of Hyderabad and Poona, Mr. Kennaway and Mr. Malet [see KENNAWAY, SIR JOHN, and MALET, SIR CHARLES WARRE]. During the summer of 1791 he occupied himself in reducing the various hill forts and preparing for another march on Seringapatam, and on 19 Oct. he reduced Nundydroog, and on 21 Dec. Severndroog, both of which were believed to be impregnable. The campaign of 1792 was commenced on 25 Jan., when Cornwallis left Severndroog with his own army, and a considerable force of Mahrattas and of the Nizam's troops. In about ten days he reached Seringapatam, and on 6 Feb. the English troops stormed the whole line of the forts to the north of the Kaveri river. A few days later General Robert Abercromby [q. v.] came up from the west coast and formed a junction with Cornwallis, and the siege of Seringapatam proper then commenced. The rapid progress of the batteries frightened Tippoo, and on 25 Feb. he surrendered two of his sons as hostages, as a sign of his willingness to make peace. After much discussion the treaty of peace was signed, by which Tippoo agreed to cede about one-half of his territories as well as to pay a sum of 3,600,000*l.* The territory ceded was divided between the company, the Nizam, and the Peishwa, with the natural result of jealous feelings between the two native powers, which eventually led to war after Cornwallis had left India; but the power of Tippoo was broken, and the prestige of the conquering Mysore dynasty, which had been established by Hyder Ali's successes, was utterly destroyed. The way was thus paved for the final overthrow of Tippoo by Lord Wellesley. In one point the behaviour of Cornwallis and General Medows contrasts favourably with that of General Harris, who finally took Seringapatam. Both of the former left their shares of prize money, amounting to 47,244*l.* and 14,997*l.*, to the army, while General Harris insisted upon every penny he could possibly claim. Cornwallis's whole conduct in India, and especially in the war with Tippoo, was highly approved in England, and on 15 Aug. 1792 he was created Marquis Cornwallis in recognition of his services.

After concluding the treaty with Tippoo Sultan, Cornwallis returned to Calcutta, and there occupied himself with the completion of his various reforms. First and most important of these was the promulgation of the Permanent Settlement, which was issued, after many years of discussion, on 22 March 1793. The state or the monarch had always been regarded as proprietor of the soil of Bengal, and to him the village community of the ryots or cultivators was bound to pay a certain proportion of the produce of the soil. This revenue was collected by royal officers called zemindars, who were either paid by a commission on what they raised, or who farmed the revenue of a district. When the company took over the government of Bengal, their collectors raised the revenue through the zemindars also, and were often bribed by these native officials to let them off lightly. Cornwallis changed the zemindar from a mere revenue official into the absolute proprietor of his district, with full rights of property in it, on condition only that he paid over a fixed sum yearly to the company's collector. This was a momentous revolution, caused really by the ignorance of native Indian laws and customs. Even more mistaken was the resolution of Cornwallis to make his land settlement permanent, thus rendering it impossible for the company to obtain more revenue, and allowing all the 'unearned increment' of the soil to go to this factitious aristocracy of zemindars. Shore (afterwards governor-general and Lord Teignmouth), the most experienced revenue official in India, pointed this out, and advocated that the settlement should be decennial (see *Life of Sir John Shore, Lord Teignmouth*, by his son); but Cornwallis was so thoroughly convinced of the corruptness of the company's civil servants, that he feared to leave them the chance of being tempted by the bribes of the zemindars, and insisted on making the settlement permanent. Next in importance to the Permanent Settlement were Cornwallis's judicial reforms. He forbade the revenue officials to exercise judicial functions; he regulated the powers of the zillah and provincial courts; he took over the whole criminal jurisdiction of Bengal by abolishing the office of nawab nazim; he established the sudder nizamut adawlut to be the supreme criminal court as the sudder dewanni adawlut was the supreme civil court, and finally he determined to apply the Mahommedan law in criminal cases with various modifications in accordance with English jurisprudence. Cornwallis was now anxious to leave India, in which country he had been detained two years longer than he had intended by the war with Tippoo, and he had the satisfaction to learn before he started that his chief coadjutor, Mr. (now created Sir John) Shore, was appointed to succeed him as governor-general, and his comrade, Sir Robert Abercromby, as commander-in-chief. On 13 Aug. he handed over the government to Sir John Shore, and sailed for Madras, in order to take command of the expedition against Pondi-

cherry, which was rendered necessary by the outbreak of war between England and revolutionary France. Pondicherry, however, had surrendered before he reached Madras, and he made up his mind to return to England at once, and sailed on 10 Oct. 1793.

Cornwallis reached England on 3 Feb. 1794, and his assistance was at once demanded by the ministers. Not only did they want to consult him on Indian affairs, but still more did they desire to make use of his military abilities in Flanders. The state of the war there against France was anything but encouraging. Prussian, Austrian, and English were disheartened and disagreeing. Such a state of affairs was fatal, and in June 1794 Cornwallis started on a special mission to advise co-operation, and to bolster up the coalition. The result of his mission was a curious suggestion from Vienna, that he should be made a local field-marshal, and put in command of the allied forces; the suggestion, to his great satisfaction, came to nothing. He saw how perilous such a situation would be, and how it would necessarily embroil him with the Duke of York. But though this scheme failed, he was persuaded in February 1795 to accept the office of master-general of the ordnance with a seat in the cabinet; and as the only general officer in the cabinet, he was necessarily entrusted with the supervision of the defences of the country in preparation for the expected invasion of the French. From this work he was called by the news of the threatening attitude taken by the East India Company's officers in Bengal. The higher relative rank of the king's officers, and their consequent absorption of staff appointments, had filled the company's officers with resentment, and the prospect of the abolition of the company's European troops, which would drive many of them into the king's service, had caused them to form a powerful secret association. Affairs looked so threatening that Dundas urged Cornwallis to go again to India, and on 1 Feb. 1797 he was sworn in as governor-general and commander-in-chief. However, the tact of Sir Robert Abercromby, and certain concessions made by the court of directors, quieted the officers, and it was not found necessary for Cornwallis to leave England. More serious was the danger threatening the peace of England from the state of Ireland, and as early as May 1797 a report that Cornwallis was going to Ireland as commander-in-chief caused Lord Camden, the viceroy, to write him an enthusiastic letter of welcome (*Cornwallis Correspondence*, ii. 325, 326). The report was premature, but in May 1798 things had come to such a desperate pass that it was necessary to place Irish affairs under an experienced general and statesman with full powers. Cornwallis was begged to accept the two offices of viceroy and commander-in-chief. 'I will not presume to say,' wrote Pitt on hearing of his acceptance, 'how much I feel myself obliged to you for such a mark of your confidence in the present government. You have, in my opinion, conferred the most essential obligation on the public which it can perhaps ever receive from the services of any individual' (*ib.* ii. 350).

The viceroyalty of Cornwallis was marked by the suppression of the rebellion of 1798, and by the carrying of the Act of Union. Many symptoms showed that a great insurrection was in preparation, but only one man, Lord Castlereagh, the acting secretary to the lord-lieutenant, appreciated the greatness of the crisis. Lord Camden and the castle officials were quite unfitted to cope with events. The military forces were also in a bad condition. The troops were chiefly English and Scotch militia, and their want of discipline had caused Sir Ralph Abercromby to resign in despair [see ABERCROMBY, SIR RALPH], and since his resignation matters had gone from bad to worse. The insurrection was fixed for 23 May, but Lord Castlereagh was informed of the whole plan, and had the leaders of the rebellion, notably Lord Edward FitzGerald and the Sheares, arrested before the appointed day. Nevertheless the rebellion did break out. Esmonde took Prosperous, and Father Murphy Enniscorthy and Wexford. These successes terrified the castle officials, and Cornwallis was sent over to suppress the rebellion. He reached Dublin on 20 June, and on the very next day Major-general John Moore, after co-operating in Lake's victory at Vinegar Hill, entered Wexford. Cornwallis had still much to do to quiet Ireland. The bands of rebels were speedily hunted down, and the rebellion kept from spreading. On 22 Aug. the serious news arrived at Dublin that General Humbert had landed at Killala Bay, and the viceroy at once started to command the troops which were directed against him. The French were only eleven hundred strong, yet on 27 Aug. they defeated the first army which came against them under General Hutchinson at the battle of Castlebar, better known as the 'Castlebar Races.' The French, in spite of their victory, found themselves badly supported, and on 9 Sept. General Humbert surrendered to Cornwallis with all his men. This success finally ruined the last hope for the Irish rebels, and it remained only to pacify the country. In this labour he followed one simple rule, namely, to punish the ringleaders, and spare their unfortunate dupes.

The clemency of his character was shown in this policy, but he saw that it was necessary to do something more to assure the peace of Ireland; he saw that it was necessary to stamp out the corruption of officials as sternly in Ireland as in India; he saw that the parliament of Ireland did not represent the people of Ireland, and was useless from a practical point of view for business, and he therefore became an ardent advocate for catholic emancipation and the abolition of the Irish parliament.

In carrying the Act of Union more credit must rest with Lord Castlereagh than with Cornwallis; but nevertheless Castlereagh could not have done what he did without the viceroy's active help and steady support. As early as 12 Nov. 1798 the Duke of Portland [see BENTINCK, WILLIAM HENRY CAVENDISH, third DUKE OF PORTLAND] sent over the first scheme of the articles of union to Dublin, and from that time the question received the viceroy's unceasing attention. The measure was at once introduced into the Irish House of Commons, but to the surprise of the government the opposition appeared in strength, and on 22 Jan. 1799, a motion of Mr. George Ponsonby, 'That the house would be ready to enter into any measure, short of surrendering their free resident and independent legislature, as established in 1782,' was carried by 107 to 105. This defeat did not discourage Lord Castlereagh, and he prepared, by boldly bribing with titles, places, and money, especially with money in the shape of compensation for borough influence, to win a majority for the Act of Union. Cornwallis loathed this trafficking for votes, and left it to his subordinate, but he supported him consistently, and passed his word for the fulfilment of the promises which Castlereagh made. He took far more interest in Castlereagh's grander scheme for the establishment of the Roman catholic church in Ireland, and believed firmly that if the invidious laws against the catholics were repealed, when the union was an accomplished fact, peace and quiet would be restored to the country. Castlereagh's bribery was successful, and on 7 June 1800 the Union Bill passed the Irish House of Commons by 153 to 88. Cornwallis had still many difficulties to contend with, for the government, or rather the king, declined at first to fulfil the pledges which he had had to make in order to get the bill carried, and when he found that such was the case he as a man of honour felt it necessaryto resign. He announced this resolve in a manly letter, dated 17 June 1800 (*Cornwallis Correspondence*, iii. 262-6). The government on receiving this letter, at once gave in, and all the new peerages and promotions in the peerage which Cornwallis had promised were duly conferred. But the question of catholic emancipation, which he had still nearer his heart, was not to be carried, and as soon as he heard that the king had refused to hear of emancipation, and that Pitt had resigned, he at once resigned both the viceroyalty and his post as master-general of the ordnance. His words in announcing his retirement to General Ross, in a letter of 15 Feb. 1801, are striking: 'No consideration could induce me to take a responsible part with any administration who can be so blind to the interest, and indeed to the immediate security of their country, as to persevere in the old system of proscription and exclusion in Ireland' (*ib.* iii. 337). He had, however, to wait until May, when his successors, Lord Hardwicke and Sir William Medows, came over to Ireland, and he then hurried back to his seat in Suffolk, Culford, intending to retire for ever from public life.

In July 1801, however, he received the command of the important eastern district, with his headquarters at Colchester, and in October he was appointed British plenipotentiary to negotiate peace with Bonaparte. He left Dover on 3 Nov., and after an interview with the first consul at Paris, he proceeded to Amiens to negotiate the treaty with the French plenipotentiary, Joseph Bonaparte. This mission was the most unfortunate which Cornwallis ever undertook. He was no diplomatist; had partly forgotten his French (see *Diary of Sir George Jackson, K.C.H.*); and was no match for Joseph Bonaparte, who was throughout cleverly prompted by Talleyrand. But in truth both nations wanted peace, though the plenipotentiaries wrangled until 27 March 1802, when the treaty of Amiens was signed. By it England surrendered all her conquests except Ceylon and Trinidad, which Holland and Spain were compelled to cede to her, and France lost nothing. Other questions were slurred over, and the treaty was in fact rather a truce than a peace.

On his return from France, Cornwallis retired to Culford, where he lived a peaceful life for three years until a demand was suddenly made upon him to go to India again as governor-general and commander-in-chief. He felt that it was a desperate thing for a man of sixty-six to undertake such a task, but his sense of duty forbade him to refuse, and he left England in March 1805. He found the country much changed when he landed at Calcutta on 29 July. The policy of Lord Wellesley and the victories of Harris over Tippoo, and of Lake and Sir Arthur Wellesley over the Mahrattas, had established

the company's power in India on a larger and grander basis. But the question naturally suggested itself whether it were possible for the company to hold safely such a vast extent of country. History has shown that Lord Wellesley was right; and his grand schemes have been justified. But in 1805 the news of Monson's defeat by Holkar had just arrived, and the company, whose revenues were diminishing while its territories were extending, desired to draw back from the position of honour into which Lord Wellesley had forced it. Cornwallis landed with the express intention of at once making peace with both Scindia and Holkar, and he wrote the day after his arrival to Lord Lake: 'It is my earnest desire, if it should be possible, to put an end to this most unprofitable and ruinous warfare' (*Cornwallis Correspondence*, iii. 532). With this intention he started up the Ganges in order to be upon the scene of action, and expressed his views in his last despatch written while upon the river on 19 Sept. (*ib.* iii. 546–54). These views were not, however, carried out [see LAKE, GERARD, VISCOUNT, and BARLOW, SIR GEORGE HILARO], for a few days later his powers of mind seemed to fail, and he began to lose consciousness. He was landed at Ghazipore, but did not gain strength, and died there on 5 Oct. 1805. Every honour that could be paid to the memory of Cornwallis was paid; a mausoleum was erected over his remains at Ghazipore, which has ever since been kept in repair by the Indian Government; statues were erected to him in St. Paul's Cathedral, at Madras, and Bombay, and 40,000*l.* was voted to his family by the court of directors. He deserved these honours, for if not a man of startling genius, he was a clear-sighted statesman and an able general, as well as an upright English gentleman.

CHARLES, the only son (*b.* 1774), became second marquis and third earl, married Louisa, daughter of the fourth Duke of Gordon, had five daughters, and died 16 Aug. 1823, when the marquisate expired. James Cornwallis [q. v.] became fourth earl.

[The Correspondence of Charles, 1st Marquis Cornwallis, ed. by Charles Ross, 3 vols. 1859, is the storehouse of facts on his career: the originals of the letters contained in it are in the Record Office; see also Kaye's Lives of Indian Officers; Wilks's Historical Sketches of the South of India for the Mysore war; and the Castlereagh Despatches for his Irish policy and government.]

H. M. S.

CORNWALLIS, FREDERICK, D.D. (1713–1783), archbishop of Canterbury, seventh son of Charles, fourth lord Cornwallis, was born on 22 Feb. 1713. He was a twin brother of General Edward Cornwallis, and Cole relates that 'both the brothers at Eton school were so alike that it was difficult to know them asunder.' From Eton Frederick proceeded to Christ's College, Cambridge, of which he became a fellow (B.A. 1736, D.D. 1748). Cole says he 'was my schoolfellow and contemporary at the university, where no one was more beloved, or bore a better character than he did all the time of his residence therein: during which time, towards the latter end of it, he had the misfortune to have a stroke of the palsy, which took away the use of his right hand, and obliged him to write with his left, which he did very expeditiously; and I have often had the honour to play at cards with him, when it was wonderful to see how dexterously he would shuffle and play them.' In 1740 he was presented by his brother to the rectory of Chelmondiston, Suffolk, with which he held that of Tittleshall St. Mary, Norfolk; and afterwards he was appointed one of the king's chaplains-in-ordinary. He was appointed a canon of Windsor by patent dated 21 May 1746, and on 14 Jan. 1746–7 he was collated to the prebend of Leighton Ecclesia in the church of Lincoln.

On 19 Feb. 1749–50 he became bishop of Lichfield and Coventry, and on 14 Nov. 1766 dean of St. Paul's (with the prebend of Wildland). Soon after the death of Dr. Secker, he was appointed by the crown to succeed that prelate as archbishop of Canterbury. His election took place on 23 Aug. 1768, and he was enthroned at Canterbury on 6 Oct. following. He died at Lambeth Palace, after a few days' illness, on 19 March 1783, and was buried on the 27th in a vault under the communion-table in Lambeth Church.

He married on 8 Feb. 1759 Caroline, daughter of William Townshend, third son of Charles, second viscount Townshend, but had no issue. She survived till 17 Sept. 1811.

Cornwallis, though inferior in learning to many of his predecessors, was much respected and beloved in his diocese. Hasted, the historian of Kent, writing from Canterbury, says: 'The archbishop gives great satisfaction to everybody here: his affability and courteous behaviour are much taken notice of, as very different from his predecessors.' At Lambeth Palace, from the instant he entered its walls, the invidious distinction of a separate table for the chaplains was abolished, and they always sat at the same board with himself. His hospitality was princely, especially on public days, it being formerly the custom for the archbishops of Canterbury, when resident at Lambeth Palace, to keep a public table one day in every week during

the session of parliament. At one period Cornwallis was the object of some censure, because his lady was in the habit of holding routs on Sundays.

He published four single sermons, and contributed verses to the university collections on the marriage of the Prince of Orange (1733) and the marriage of Frederick, prince of Wales (1736). His portrait has been engraved by Fisher, from a painting by Dance.

CORNWALLIS, JAMES, fourth Earl Cornwallis (1742-1824), bishop of Lichfield and Coventry, was the third son of Charles, first earl Cornwallis, by Elizabeth, daughter of Charles, viscount Townshend, and the younger brother of Charles, first marquis Cornwallis [q. v.] He was born in Dover Street, Piccadilly, London, on 25 Feb. 1742, and was educated at Eton and Christ Church, Oxford, where he graduated B.A. in June 1763, afterwards being given a fellowship at Merton, from which college he took the M.A. degree in 1769. On ceasing residence at Oxford he entered as a member of the Temple, and intended practising at the bar, but on the advice of his uncle, Frederick Cornwallis, archbishop of Canterbury, he altered his mind and took holy orders. He commenced his career in the church by acting as chaplain to his cousin, Lord Townshend, lord-lieutenant of Ireland, till in 1769 he was presented by his uncle to the living of Ickham, Kent, to which that of the neighbouring parish of Adisham was added in the following year. In this same year (1770) he was made a prebend of Westminster, rector of Newington, Oxford, and then of Wrotham, Kent. On receiving this last appointment he resigned the livings of Ickham and Adisham, but six months later he was for the second time inducted as rector of Ickham, a dispensation having been granted allowing him to hold the rectory of Wrotham conjointly with that of Ickham and the chapel of Staple. In 1773, having in the meantime again resigned the living at Ickham, he became, still by his uncle's patronage, rector of Boughton Malherbe in the same county. From being a prebend of Westminster he was preferred in 1775 to the deanery of Canterbury, while he continued to hold his parochial cures, and at about the same time he received the honorary degree of D.C.L. from his university. In 1781 he was consecrated bishop of Lichfield and Coventry, and then at length retired from his Kentish livings. On the translation of Bishop Douglas of Carlisle to the see of Salisbury in 1791, Cornwallis succeeded him as dean of Windsor, a position which three years later he exchanged for that of dean of Durham.

In August 1823 the second Marquis Cornwallis died, and the marquisate becoming extinct, the earldom reverted to his uncle the bishop, who was now in his eighty-second year. On 20 Jan. 1824 he died at Richmond, Surrey. He had been bishop of Lichfield for nearly forty-three years, and was buried in his cathedral.

In 1771 he married Catharine, daughter of Galfridus Mann of Newton and Boughton Malherbe, and sister of Sir Horace Mann, by whom he became the father of two daughters and a son James, who succeeded to the title.

He published at intervals five sermons (1777, 1780, 1782, 1788, 1811).

[Add. MS. 19167, fol. 142 (inaccurate in some respects); Gent. Mag. August 1823 and August 1824; Hasted's Kent, ii. 245, 432, and iii. 669, 672; Cat. of Oxford Graduates, p. 152.] A. V.

CORNWALLIS, JANE, Lady Cornwallis (1581-1659), was the daughter of Hercules Meautys of West Ham, Essex, by Philippe, daughter of Richard Cooke of Gidea Hall, in the same county. She became, in 1608, the second wife of Sir William, elder son of Sir Thomas Cornwallis [q. v.] of Brome, Suffolk. Her husband died in 1611, leaving issue by her an only son, Frederick, who was created Lord Cornwallis. In 1613 she married Sir Nathaniel Bacon, K.B., of Culford, Suffolk, where she died on 8 May 1659.

Her 'Private Correspondence' between 1613 and 1644 was published at London in 1842, 8vo.

There is a full-length portrait of her at Audley End.

[Pref. to Cornwallis Correspondence; Addit. MS. 19079, f. 92 *b*, 95, 96 *b*.] T. C.

CORNWALLIS, Sir THOMAS (1519-1604), comptroller of the household, was the eldest son of Sir John Cornwallis, steward of the household to Prince Edward, son of Henry VIII, by his wife Mary, daughter of Edward Sulyard of Otes, Essex. He was knighted at Westminster on 1 Dec. 1548, and in the following year was sent to Norfolk, with the Marquis of Northampton, Lord

Sheffield, and others, to quell the insurrection, which was headed by Robert Ket the tanner. Though they contrived to take Norwich, that city was shortly afterwards retaken by the rebels, when Lord Sheffield was killed and Cornwallis taken prisoner. Upon the defeat of the rebels by the Earl of Warwick and the German mercenaries he regained his liberty. In 1553 he served the office of sheriff of Norfolk and Suffolk, and upon the death of Edward VI repaired to Framlingham to offer his assistance to Mary. In October of the same year he was commissioned with Sir Robert Bowes to treat with the Scotch commissioners for the purpose of settling the differences between the two kingdoms, and the treaty of Berwick was signed by them on 4 Dec. (*Cal. of State Papers*, Dom. 1601–3, Addenda, 1547–67, p. 430). In January 1554 Cornwallis and Sir Edward Hastings were sent by the queen to Dartford in order to confer with Sir Thomas Wyatt, whom they were instructed to tell that she 'marvelled at his demeanour,' 'rising as a subject to impeach her marriage.' When Courtenay in the following month deserted Sir John Gage and fled to Whitehall on the arrival of Wyatt, crying 'Lost! all is lost,' it was Cornwallis who rebuked him by saying, 'Fie, my lord, is this the action of a gentleman?' In March Cornwallis served on the commission for the trial of Wyatt, who after a short respite was beheaded on 11 April 1554 (Holinshed, 1587, pp. 1103–4). In the previous February Cornwallis had been despatched with Sir Richard Southwell and Sir Edward Hastings to bring the Princess Elizabeth back from Ashridge in Hertfordshire, whither she had retired in 1553. Though suffering from illness they compelled her to rise from her bed, and by slow stages of six or seven miles a day brought her to London. When it was suggested, with a view of excluding her from the succession, that the princess should be sent out of England, Cornwallis made a successful protest in the council. In 1554, when he was also elected M.P. for Grampound, he became treasurer of Calais; he was only recalled some two months before the town fell into the hands of the French in January 1558. On 25 Dec. 1557 he was made comptroller of the household in the place of Sir Robert Rochester (Strype, vi. 23), and in the following month was elected one of the members for the county of Suffolk. Upon the accession of Elizabeth he was removed from his post in the household as well as from the privy council, and thereupon retired to his Suffolk estates and rebuilt Brome Hall. Being a staunch papist and a trusted servant of the late queen, he was naturally an object of suspicion to Elizabeth's ministers. On the appearance of symptoms of disaffection among the catholic nobles in 1570, Lord Southampton, one of the intended leaders of the insurrection, and Cornwallis were at once arrested. Shortly afterwards the threatened danger of a war with France was averted, and they were then set at liberty. In 1567 Cornwallis attended a conference on religious matters, the result of which was that on 20 June he made his humble submission to the queen, and 'entreated pardon for his offence in having withstood her laws for establishing true religion' (*Cal. of State Papers*, Dom. 1547–80, p. 293). He seems, however, to have sadly relapsed, for in 1578 various complaints were made of his conduct, among others that he 'shared in drunken banquetings of bishops' servants, and made scoffing excuses for coming to church' (*ib.* Add. 1566–79, p. 551). In a letter, however, to Lord Burghley, dated 9 July 1584, Cornwallis asserts that 'no action of his life discovers a disobedient or unquiet thought towards her majesty,' and transmits a copy of his letter to the bishop of Norwich justifying his non-attendance at church (*ib.* 1581–90, p. 190). His name heads the list of recusants for 1587 (Strype, xii. 597). He died on 28 Dec. 1604 in the eighty-sixth year of his age, and was buried in the church at Brome, where a monument was erected to his memory. With regard to his age there is some doubt, as it is stated in 'Excursions through Suffolk' (p. 22) that 'his portrait when at the age of seventy-four, in 1590, hangs in the dining-room.' This portrait is unfortunately no longer there, but was sold with the rest of the family relics at Brome Hall in 1825–6. Cornwallis married Anne, the daughter of Sir John Jerningham of Somerleyton, Suffolk, by whom he had two sons and three daughters. William, his eldest son, was knighted at Dublin on 5 Aug. 1599 for his services in Ireland under Robert, earl of Essex, and was the father of Sir Frederick Cornwallis, bart., who on 20 April 1661 was created Baron Cornwallis of Eye for his fidelity to Charles I. Of the younger son, Sir Charles Cornwallis, a separate notice is given. The suspicions of Sir Thomas's complicity with the French when treasurer of Calais, which are recorded in the lines,

Who built Brome Hall? Sir Thomas Cornwallis.
How did he build it? By selling of Calais,

appear to be quite unfounded; for in a letter written at Calais on 2 July 1557, Cornwallis warned the queen of the weakness of the garrison, and entreated that a larger force should be immediately sent over.

F. R. B.

CORNWALLIS, THOMAS (1663–1731), commissioner of lotteries, fourth son of Charles, second lord Cornwallis, by his wife Margaret Playsted, was born in Suffolk on 31 July 1663. In April 1676 he, together with his elder brother William, was admitted a fellow-commoner of Corpus Christi College, Cambridge, under the tutorship of Mr. Lane. To the latter's inspiration are possibly due some creditable Latin elegiacs signed by Cornwallis, which appeared in the 'Epithalamium . . . ab Academia Cantabrigiensi decantatum,' on the occasion of the marriage of the Prince of Orange with the Princess Mary (Camb. 1677). On leaving Cambridge, where he apparently took no degree, Cornwallis obtained a commission in the guards, and some years later succeeded his brother Frederick in the command of the independent company in Jersey. In 1709 the system of parliamentary lotteries was introduced, and Cornwallis is credited with having been the original projector. The scheme was briefly as follows: 150,000 tickets were to be sold at 10*l.* apiece, making 1,500,000*l.*, the principal of which was to be sunk and 9 per cent. allowed on it during thirty-two years: 3,750 of the tickets were prizes varying in value from 1,000*l.* to 5*l.* per annum; the remainder were blanks, of which there were therefore thirty-nine to one prize, but each blank was entitled to 14*s.* per annum for thirty-two years. This scheme proved a great popular success, and was the foundation of all the subsequent state lotteries, which continued to be set on foot in every session of parliament till 1824. Cornwallis was annually appointed a commissioner of lotteries up to the year of his death, which occurred in St. James's Street on 29 Dec. 1731 (*Gent. Mag.* 1731, p. 540).

Cornwallis was twice married; first, to Jane, widow of Colonel Vernam, and secondly, to Anne, daughter of Sir Hugh Owen and widow of John Barlow of Laurenny, Pembrokeshire.

CORNWALLIS, SIR WILLIAM (*d.* 1631?), knight and essayist, elder son of Sir Charles Cornwallis [q. v.] by his first wife, Elizabeth, daughter of Thomas Farnham of Fincham in Norfolk, married on 26 Aug. 1595 Catherine, daughter of Sir Philip Parker of Erwarton, Suffolk, by whom he had his eldest son, Charles, and other children. He was M.P. for Lostwithiel in 1597 and for Orford in 1604 and 1614. He appears to have been knighted in 1602. He was a friend of Ben Jonson, and employed him to write 'Penates, or a Private Entertainment for the King and Queen,' on their visit to his house at Highgate on May-day, 1604. His essays are in imitation of Montaigne, but lack the sprightliness of the French author. Cornwallis spent his life in studious retirement. His works are: 1. 'Discourses upon Seneca the tragedian,' 1601, 16mo, 1631. 2. 'Essayes by Sir W. Cornewaleys' (E. Mattes), 1st part 1600, 2nd part 1610, 16mo and 12mo, 1616 4to, two parts with a frontispiece 1617, and 1632 small 8vo, with the essays upon Seneca, 1631. 3. 'The Miraculous and Happy Union between England and Scotland,' 1604, 4to. 4. 'Essays on certain Paradoxes,' 2nd edit. enlarged twenty-four leaves, not paged, 1617, 4to; one of these essays, 'The Praise of King Richard III,' is reprinted in the 'Somers Tracts,' iii. 316, edit. 1810. 5. 'Essays or Encomiums,' 1616, 1626. 6. Verses in Sylvester's 'Lacrymæ Lacrymarum' on the death of the Prince of Wales, and lines on the monument of Lucy, lady Latimer, in Hackney Church; this lady was the wife of Sir William Cornwallis (died 1611), uncle of the essayist, who is therefore generally described as the younger. In the 1632 edition of the 'Essays,' published after the author's death, there is a print of two men sitting and writing, supposed to represent Sir Charles and Sir William Cornwallis, his son.

[Davy's MS. Athenæ Suffolc. i. 142; Collins's Peerage of England (Brydges), ii. 547; Wood's Athenæ Oxon. (Bliss), ii. 613; Page's Supplement to the Suffolk Traveller, p. 5; Grainger's Biog. Hist. (ed. 1775), ii. 333, 334.] W. H.

CORNWALLIS, SIR WILLIAM (1744–1819), admiral, fourth son of Charles, fifth lord and first earl Cornwallis, was born on 20 Feb. 1743–4, and entered the navy in 1755, when his first service was on board the Newark, in the fleet sent to North America under Boscawen. Afterwards, in the Kingston, he was present at the reduction of Louisbourg in 1758, and in the Dunkirk at the battle of Quiberon Bay. The Dunkirk was shortly afterwards sent to the Mediterranean, and in December 1760 Cornwallis

was moved into the Neptune, the flagship of Rear-admiral Saunders, by whom, on 5 April 1761, he was appointed lieutenant of the Thunderer with Captain Proby, in which, on 17 July, he assisted in the capture of the Achille of 64 guns off Cadiz. In July 1762 he was promoted to be commander of the Wasp sloop; in October was removed to the Swift, in which he continued till April 1765, when he was posted to the Prince Edward, which ship he paid off in May 1766. He was shortly afterwards appointed to the Guadeloupe frigate, which he commanded in the Mediterranean and on the home station till 1773; and in 1774 was appointed to the Pallas, in which he was employed on the west coast of Africa till 1776; during the latter part of the period, in arresting the ships of the American colonies, which, in that out-of-the-way locality, had established a trade in powder (Cornwallis to sec. of the admiralty, Sierra Leone, 30 Jan. 1776). He then went to the West Indies, and sailed from Jamaica in September with a convoy of 104 merchant ships. Partly from bad weather, and still more from the carelessness and obstinacy of the masters, the convoy separated, and the Pallas arrived in the Channel with not more than eight or ten sail in company. The merchants, owners of the ships, made vehement complaints, and Cornwallis was compelled, in his defence, to enter into a detailed account of the misconduct of the masters, on whom the blame ultimately fell.

Early in 1777 he was appointed to the Isis of 50 guns on the North American station, with Lord Howe, by whom he was transferred for a short time to the Bristol; was then sent home in command of the Chatham, March 1778; was moved into the Medea, May 1778; and on 5 Aug. was appointed to the Lion of 64 guns. In her, in the following spring, he went out to the West Indies in charge of convoy, and arrived at St. Lucia on 3 April 1779. Here he joined Vice-admiral Byron, and took an important part in the battle of Grenada (6 July 1779). Owing to the confused way in which Byron rushed into action, the leading ships suffered severely, the Lion in an especial degree. She was almost entirely dismasted, and drifted to leeward, so that when the French fleet tacked and returned to St. George's Bay, their line cut her off from the English fleet. She ought to have proved no very difficult prize, but D'Estaing was fortunately too prudent to risk what might bring on a renewed engagement, and the Lion went off before the wind under such sail as she could set on the stumps of her lower masts. She reached Jamaica in safety, and, having refitted there, was in the following March sent, in company of the Bristol and Janus, to cruise in the windward passage. Off Monte Christi on 20 March he fell in with a French convoy under the escort of four ships of the line and a frigate, which gave chase, and in light baffling winds succeeded in overtaking and bringing him to action on the 21st. The unequal fight was maintained at intervals during the day, and was renewed the next morning; but on Cornwallis being joined by the Ruby of 64 guns and two frigates, the French drew off and rejoined the convoy. Three months later Cornwallis had been detached with a small squadron to see the West Indian trade safely through the gulf, and was on 20 June in the neighbourhood of Bermuda, when he sighted a convoy, which was in reality the fleet of transports carrying M. de Rochambeau and the French troops to North America, under the escort of nine ships of the line and a frigate, commanded by M. de Ternay. Cornwallis's force consisted of only two ships of 64 guns, and two of 50, with a 32-gun frigate; but De Ternay, probably judging that the interests at stake were too great to run any needless risk, made no serious effort to crush it, and the squadrons separated after a desultory interchange of fire (Beatson, *Memoirs*, v. 98, vi. 231; *Mémoires de Lauzun*, 1858, 327; Adolphe de Bouclon, *Liberge de Grandchain*, 266–70). Towards the close of the year Cornwallis returned to England, taking with him as a passenger in the Lion Captain Horatio Nelson, who was invalided from the command of the Janus. The two had already become intimate during their stay in Jamaica, and contracted a friendship which lasted through their lives (*Nelson Despatches*, i. 8, 33).

In the following spring the Lion formed part of the fleet under Vice-admiral Darby at the relief of Gibraltar. Cornwallis was shortly afterwards appointed to the Canada of 74 guns, and in August sailed for North America under the orders of Rear-admiral Digby. When the attempt to relieve York had proved futile, Digby placed the Canada, together with other ships, under the command of Sir Samuel Hood, who was returning to the West Indies. Cornwallis had thus a very important share in the engagement with De Grasse at St. Kitts on 26 Jan. 1782 [see Affleck, Sir Edmund], and afterwards took part in the actions of 9 and 12 April to leeward of Dominica. In August the Canada was ordered to England as one of the squadron under Rear-admiral Graves and a large convoy. The greater number of the men-of-war and merchant ships were overwhelmed in a violent hurricane on 16–17 Sept. (*Nau-*

tical Magazine, September 1880, xlix. 719) [see GRAVES, SAMUEL, LORD GRAVES; and INGLEFIELD, JOHN NICHOLSON]. More fortunate than most of her consorts, the Canada escaped with the loss of her maintop-mast and mizen-mast, and arrived in England in October.

In January 1783 Cornwallis was appointed to the Ganges, and two months later to the Royal Charlotte yacht, which command he held till October 1787. He was then appointed to the Robust, and in October 1788 to the Crown, with a broad pennant on being nominated commander-in-chief in the East Indies, where he arrived in the course of the following summer. The force under his command was small, though objected to by the French commodore as exceeding what had been agreed on, to whom Cornwallis replied that he knew of no such convention. Although the two nations were at peace, there was some jealousy of the French negotiations with Tippoo, which was intensified when war with Tippoo broke out and it was reported that he was supplied with munitions of war by French merchant ships. In November 1791 Cornwallis was lying at Tellicherry when he learned that the French frigate Résolue was leaving Mahé with two merchant ships in company. The Phœnix and Perseverance frigates, each more powerful than the Résolue, were ordered to search these ships for contraband of war. The Résolue refused to permit the search, and fired a broadside into the Phœnix, but after a short, sharp action, in which she lost twenty-five men killed and forty wounded, she struck her colours. The Perseverance had meantime examined the merchant ships, which, being found clear of contraband, were directed to pursue their voyage; but the Résolue, insisting on being considered as a prize, was taken into Tellicherry, whence Cornwallis sent her to Mahé. The French commodore, M. St. Félix, complained angrily of the conduct of the English, but made no further attempt to resist the right of search on which Cornwallis insisted, and the dispute finally merged in the greater quarrel that broke out between the two countries. On the first intelligence of the war Cornwallis seized on all the French ships within his reach, made himself master of Chandernagore, and, in concert with Colonel Braithwaite, reduced Pondicherry; shortly after which he sailed for England, which he reached in the spring of 1794. He had meantime, on 1 Feb. 1793, been promoted to be rear-admiral, and in May 1794 he hoisted his flag on board the Excellent for service in the Channel. On 4 July he was advanced to be vice-admiral, when he moved his flag to the Cæsar of 80 guns, and in December to the Royal Sovereign of 100 guns.

In the following June, still in the Royal Sovereign, and having with him four 74-gun ships and two frigates, he was cruising off Brest, when on the 16th, to the southward of the Penmarcks, he fell in with the French fleet under M. Villaret-Joyeuse, consisting of twelve ships of the line and as many large frigates, together with small craft, making an aggregate of thirty sail. Cornwallis was compelled to retreat. Two of his ships, the Bellerophon and Brunswick, proved to be very heavy sailers; in consequence of which, and a slight shift of wind to their advantage, the French were able to draw up in two divisions, one on each quarter of the English squadron. By the morning of the 17th they were well within range, and a brisk interchange of firing took place between their advanced ships and the rearmost of the English, especially the Mars, which suffered considerably in her rigging; so that Cornwallis, fearing she might be cut off, wore round to her support. This bold front led the French to suppose that the English fleet was in the immediate neighbourhood, a supposition which was confirmed by the English look-out frigate making deceptive signals, and by the fortuitous appearance of some distant sail. They bore up and relinquished the pursuit, leaving Cornwallis at liberty to proceed to Plymouth with intelligence of the French fleet being at sea. This escape from a force so enormously superior, and especially the bold manœuvre of the Royal Sovereign, raised the reputation of the vice-admiral to a very high pitch. But it is clear that had the French attacked seriously the English must have been overpowered, and so considered Villaret-Joyeuse loses even more credit than Cornwallis gains (JAMES, *Naval Hist.* 1860, i. 264; EKINS, *Naval Battles*, p. 231).

In the following February (1796) Cornwallis was appointed commander-in-chief in the West Indies, and ordered to proceed to his station with a small squadron of ships of the line and a number of transports. In going down Channel the Royal Sovereign was fouled by one of these transports, and sustained such damage that, after seeing the convoy well to sea, Cornwallis judged it right to return. The admiralty disapproved of his doing so, and sent him an order to hoist his flag in the Astræa frigate and proceed to Barbadoes with all possible despatch. This order, conveyed—not, as has been said, in a private note from Lord Spencer, but—in a formal letter signed by the board, was

dated 15 March; and on the 16th Cornwallis replied, assuring their lordships of his 'readiness to proceed in the Royal Sovereign the moment her defects were made good, but that the very precarious state of his health obliged him to decline going out in a small frigate, a stranger to every person on board, without accommodation or any comfort whatever.' This refusal was considered an act of disobedience, and the admiralty ordered a court-martial. The court pronounced a censure on him for not pursuing the voyage in one of the other ships of the squadron, but acquitted him on the charge of disobeying the order to proceed in the Astræa, accepting, it would appear, his defence that he had remonstrated against the order; 'that his health would not permit him to go out under such circumstances, and that he would have resigned the command if the order had been made positive; but as to disobeying, he had no thought of it' (*Minutes of the Court-martial*). Notwithstanding his virtual acquittal, Cornwallis considered himself ill-treated by the admiralty, and requested permission to strike his flag. This was readily granted, and he had no further employment under that administration.

On 14 Feb. 1799 he was made admiral, and in 1801 succeeded Lord St. Vincent in command of the Channel fleet. He resumed the command when the war broke out again in 1803, but without any opportunity of distinction. In March 1806 he was superseded by Lord St. Vincent, and had no further service. On the extension of the order of the Bath in 1815, he was nominated a Grand Cross. He was M.P. for Eye 1768–74, 1782–4, 1790–1807, and for Portsmouth 1784–90. He died on 5 July 1819.

Cornwallis is described as of middle size, stout and portly, and though strictly temperate, as having a jovially red face, which procured for him among the seamen the nickname of 'Billy go tight.' Other soubriquets—'Blue Billy,' 'Coachee,' and 'Mr. Whip'—he is said to have owed to a habit of twiddling his forefinger and thumb (*Naval Chronicle*, xi. 100, 207, xvi. 114). His popularity is illustrated by the story told of him when in the Canada, which, though incorrect in the details, is possibly founded on fact. The men, it is said, mutinied, and signed a round-robin declaring that they would not fire a gun until they were paid. Cornwallis turned the hands up and addressed them: 'My lads, the money cannot be paid till we return to port, and as to your not fighting, I'll just clap you alongside the first ship of the enemy I see, when the devil himself can't keep you from it.'

[Letters and official papers in the Public Record Office (the minutes of the court-martial have been printed, fol. 1796); Ralfe's Nav. Biog. i. 387; Naval Chronicle (with an engraved portrait of him, aged 30), vii. 1; Charnock's Biog. Nav. vi. 533. These memoirs are all exceedingly inaccurate in their details, and must be read with great caution.] J. K. L.

CORNYSSHE, WILLIAM (*d.* 1524?), musician, was a member of the Chapel Royal in the reigns of Henry VII and Henry VIII. The first information we have of him is derived from an entry in the Privy Purse Expenses of Henry VII on 12 Nov. 1493, when 13*s.* 4*d.* was paid to 'one Cornysshe for a prophecy.' On 26 Oct. 1502 he was paid 30*l.* for three pageants, and in the same year he received 13*s.* 4*d.* 'for setting of a carrall upon Cristmas day.' According to Stow (*Annales*, ed. 1615, p. 488) he was the author of a satirical ballad against Sir Richard Empson, which he wrote at the request of the Earl of Kent. This it was which probably led to his being imprisoned in the Fleet, where he wrote a short poem called 'A Treatise bitweene Trouth and Enformacon.' A manuscript copy of this is to be found in the British Museum (Royal MS. 18, D. 11), and a bad text of it is printed in Skelton's 'Pithy, Pleasaunt, and Profitable Workes' (1568), where it is classed among the newly collected works. The manuscript version of the poem is headed 'In the fleete made by me Wllm̃. Cornysshe, otherwise called Nyssewhete Chapelman wth the moost famost and noble Kyng henry the VIIth, his raigne the xixth yere the moneth of July,' and begins 'A. B. of E. how C. for T. was P. in P.,' which possibly may stand for 'A Ballad of Empson, how Cornysshe for Treason was Put in Prison.' The pseudonym 'Nyssewhete' is evidently formed from the author's name, 'wheat' being put as a synonym of 'corn.' The poem contains many bitter complaints against informers; it is of small literary value, but part of it, 'A Parable between Informacion and Musike,' is interesting from its use of musical terms. Whatever may have been the reason for his imprisonment, Cornysshe was before long released, and reinstated in his appointment, for his name occurs as having played before Henry VII at Richmond with Kyte and 'other of the Chapell' in 1508–9; and on the death of William Newark in the latter part of 1509, he became master of the children at a yearly salary of 26*l.* 13*s.* 4*d.* On 1 Jan. 1511 he received a sum of 5*l.*, and on 13 Feb. of the same year he played two prominent parts in a pageant at Westminster entitled 'The Golldyn Arber in the Arche Yerd of Plesyer.' For his dresses in this perform-

ance 14 yards of stuff were allowed for a gown and bonnet, and 46½ yards of green satin for another gown. Cornysshe and his colleague Crane's [q. v.] dresses were decorated with three hundred letters 'H. K.,' but the mob on this occasion was so unruly that most of the costumes, including those of the sub-dean and two gentlemen of the chapel, were quite spoilt. In the same year Cornysshe played at Greenwich in Gibson's pageant 'The Dangerus Fortrees,' in which 16¾ yards of white satin were allowed for his dress. On 12 March 1512, for some unexplained reason, Cornysshe and Sir John Kyte entered into a recognisance for the repayment of a loan of 2,500*l.* from James Harrington, dean of York, but the whole sum was repaid by 2 July in the same year. In December 1513, when the court was at Windsor, Cornysshe received 20*s.* for singing 'Audivi' on Allhallows day. As master of the children it was part of Cornysshe's duty to provide the Chapel Royal with choristers, for which purpose he had, as was long the custom, wide powers of forcing children with suitable voices into the chapel. The Privy Purse Expenses of Henry VIII's reign contain many entries as to the costs paid to Cornysshe, e.g. in April 1514, 66*s.* 8*d.* was paid to him for teaching, finding, and apparelling Robert Philip, child of the chapel, for half a year; in June 1514 he received 33*s.* 4*d.* for 'finding of 2 children;' in July 1517 he was paid 33*s.* 4*d.* for finding and teaching William Saunders, 'late a child of the chapel,' for one quarter, and 20*d.* a week when the king keeps no household; and in May 1518 he received board wages for ten children at 8*d.* a week. His duties as master of the children seem at one time to have nearly led him into a dispute with Wolsey, for from a letter to the latter from Pace, dated 25 March 1518, there appears to have been a chorister in the cardinal's chapel whom Cornysshe wished to secure for the Chapel Royal. Pace informs Wolsey that the king 'hath plainly shown unto Cornysche that your Grace's chapel is better than his,' but Wolsey took the hint and surrendered the boy, for on 1 April Pace writes: 'Cornysche doth greatly laud and praise the child of your chapel sent hither, not only for his sure and cleanly singing, but also for his good and crafty descant, and doth in like manner extol Mr. Pygote for the teaching of him.' In the earlier of these letters we also learn how on a royal progress from Reading to Abingdon, where fodder was likely to run short, Cornysshe 'made a merry supplication unto the King's grace for a bottle of hay and an horseloaf.' It was also the duty of the master of the Chapel Royal to prepare and perform interludes and masques, generally at Christmas and Twelfth Night. At Christmas 1514 'The Tryumph of Love and Beauty' was written and presented by Cornysshe and others of the chapel at Richmond, for which the king gave him 'a ryche rewarde out of his owne hand, to be dyvyded with the rest of his felows,' as he himself recorded in an autograph roll of the expenses of the revels. He seems to have been in high favour, for in November 1516 he received a reward of 200*l.*, the usual payment for playing before the king with the children of the chapel being 6*l.* 13*s.* 4*d.* On 6 Jan. 1515 he played at Greenwich in Gibson's pageant 'The Pavyllyon on the Plas Parla,' and on 6 Jan. 1516 at Eltham he played the part of Calchas, dressed in 'a mantel and bishop's surcoat,' in 'The Story of Troylous and Pandor.' In the same play he took the part of a herald, the dresses he received in the whole piece being entered as a mantle, a surcoat of yellow sarcenet, a coat armour, a garment of black sarcenet, and a bonnet. In another pageant, 'The Garden of Esperance,' it is recorded that 16 yards of black sarcenet and 52½ yards of green sarcenet were used for his clothes, and after the entertainment the king gave him three gowns of black, red, and green sarcenet and two coat armours which had been worn by the performers. In 1518 Cornysshe received 18*l.* 2*s.* 11½*d.* for two pageants at Greenwich, and in August 1520 a masque by him was played before Henry at New Hall, Essex. In the same year he accompanied the king, with ten of the children of the chapel, to the Field of the Cloth of Gold, where he was entrusted with the devising of the pageants at the banquet. For the diet of the children during their absence (sixty-two days) he was paid 2*d.* per diem. In 1522, when the emperor visited Henry at Greenwich, Cornysshe again devised the revels; his name also appears on the list of persons whose houses were occupied by the visitors. He must have been in affluent circumstances, as he is put down as possessing eight feather beds (*Rutland Papers*, ed. Jerdan, Camden Soc. 82). His duties seem to have been multifarious, for in 1516 he was paid 100*l.* for repairs at Greenwich, and in the same year 36*l.* 10*s.* for 'paving gutters of lead for urinals and other necessaries at Greenwich.' On 10 Aug. 1523 Cornysshe obtained a grant of the corrody in the monastery of Thetford, *vice* John Lloyd deceased (also a member of the Chapel Royal), and ten days later a grant in survivorship was issued to him, his wife Jane, and Henry his son, of the manor of Hylden, Kent. The Thetford corrody does not seem to have been valuable,

as it is recorded in 1524 that 3*s.* 4*d.* was paid to Cornysshe by the prior. He also owned a corrody in the monastery of Malmesbury. The exact date of his death is unknown, but he was dead in November 1524, when the Malmesbury corrody was granted to Edward Weldon. Of his music not much remains. Four pieces by him are printed in Wynkyn de Worde's collection of twenty songs (1536), and other songs for two, three, and four voices are to be found in the British Museum (Add. MSS. 5465 and 31922). He seems to have been principally a composer of secular music, and set several poems by Skelton. Of his church music there are extant the medius part of a 'Salve Regina' (*Harl. MS.* 1709, fol. 51 *b*), and a setting for four voices of Skelton's 'Wofully Araid' (*Add. MS.* 5465, fol. 63 *b*). Hawkins (*History of Music*, iii. 2) has reprinted two of the songs from the latter manuscript, in which Cornysshe is described as 'John Cornysshe, Junior.' This has led Hawkins and other writers to conclude that there were two contemporary composers of the same name, but it seems probable that this was not the case, especially as the 'Libri Computi' of Magdalen College chronicle the payment of 27*s.* 7*d.* in 1502–3 to 'Cornysshe, pro hymnali,' and in 1508–9 of 7*s.* 7*d.* to Thomas Cornysshe 'pro scriptura 13 tabularum pro æde sacra,' and in the British Museum (Add. MS. 5665) is a motet 'Dicant nunc Judei,' signed Johannes Cornysshe. The suffix 'Junior' was therefore most likely added to distinguish William Cornysshe from these individuals, either of whom may have been his father.

[Most of the facts as to Cornysshe are to be found in the Calendar of Letters and Papers, Henry VIII; Collier's Hist. of Dramatic Poetry, ed. 1879; Magd. Coll. Registers, ed. Bloxam, ii. 263; Skelton's Works, ed. Dyce, 1843; Archæologia, xli. 371–86; Tanner's Bibliotheca; authorities quoted above.] W. B. S.

CORPRE CROMM (Corpre the bent or stooping), SAINT (*d.* 900), became abbot of Clonmacnois in 886, in succession to Maelduri, who died in that year. He was regarded as the 'chief ornament of his age and country, a cherisher and promoter of religion,' or, as the 'Lebar Brecc' has it, 'the head of piety and charity in Ireland in his time.' The 'Martyrology of Donegal' in giving his pedigree represents him as the son of Feradach, a descendant in the fourth generation of Mainè Mor, from whom were the Ui Mainè of the race of Colla da Chrioch, but this is a very strange mistake. The author has, in fact, supplied the saint with a pedigree belonging to a totally different person, who bore the name of Corpre Cromm, but was a layman, not an ecclesiastic. He was a prince of Ui Mainè who flourished three centuries earlier, having been a contemporary of St. Ciaran of Clonmacnois [q. v.], who died in 549, and to whom he made several grants for the benefit of his monastery. The 'Book of Leinster,' in which Corpre is styled correctly 'Episcopus,' gives a brief notice of his parentage, and he is there stated to have been the son of Decill, son of Adsluag, son of Aelbad.

In the church of Clonmacnois he gathered round him a band of twelve presbyters, the number being suggested, as Bishop Reeves has observed, in this and other instances, by the desire which prevailed in the early ages of christianity to imitate even the accidental features of the apostolic system.

In 895 he was engaged in holding a 'synod of seniors,' or learned men, at Inis Aingean (now Hare Island) in Loughrea on the Shannon, some nine miles higher up the river than Clonmacnois. Here St. Ciaran [q. v.], the founder of that famous monastery, had erected his first church. The synod was rudely interrupted by a party of Connaughtmen, who had made an inroad into Westmeath. They showed entire disregard to the sanctity of the bishop and of the shrine of St. Ciaran which he had with him, and in the tumult which took place the island was profaned by murder. In the community of Clonmacnois, however, Bishop Corpre was held in such reverence that the anniversary of his death was observed as a festival, and his memory was perpetuated by an inscription in the Irish language, described by Dr. Petrie as still to be seen there, and containing the words, 'Pray for Corpre Cromm.' Though few particulars of his life have been preserved, he is well known in Irish hagiology in connection with the story of the apparition of King Moelsechlainn. Thus the 'Four Masters,' in recording his death, add that 'it was to him the spirit of Moelsechlainn showed itself.' The legend is of considerable antiquity, being found in the 'Lebar Brecc,' a compilation of the fourteenth century. It was intended to enforce on kings the duty of liberality to the church, the only alleviation to his sufferings which the king of Ireland enjoyed after death being derived from the ring and the shirt which he had bestowed in his lifetime. It further proved the advantage of burial in the sacred soil of Clonmacnois, where the deceased had the benefit not only of the intercession of the departed founder, the great St. Ciaran, but of his successor, the living St. Corpre, and his twelve priests.

In the modern summary of the legend in the

'Martyrology of Donegal,' where the king's release from torment through St. Corpre's intercession is described, 'purgatory' is substituted for 'hell,' the compiler, O'Clery, being no doubt scandalised at the statement that the power of St. Corpre extended so far as is there stated. His day is 6 March.

CORRANUS, ANTONIO DE (1527–1591), theologian. [See CORRO.]

CORRI, DOMENICO (1746–1825), musical composer, was born in Rome 4 Oct. 1746, and at the age of ten belonged to the bands of the principal theatres. During his early life he was a fellow-pupil with Clementi and Rauzzini, for the latter of whom he wrote his first important work. In 1763 he went to Naples in order to study under Porpora, and remained there until his master's death in 1767. Four years afterwards he was invited to Edinburgh to sing and conduct the concerts of the musical society there; he accordingly settled there as a performer and a singing-master, and subsequently as a publisher. In 1774 he went to London for the production of his opera, 'Alessandro nell' Indie,' in which his friend Rauzzini made his first appearance; the opera was only partially successful, since, as Burney says, 'his name was not sufficiently blazoned to give his opera much *éclat*, or, indeed, to excite the attention it deserved.' He did not again visit England for thirteen years, but remained fully occupied in Edinburgh. In collaboration with his brother Natale, who seems to have come from Italy with him, he published 'A Select Collection of Forty Scotch Songs, with introductory and concluding symphonies, proper graces,' &c., and 'A Complete Musical Grammar.' In December 1787 he made another though humbler attempt at dramatic composition, joining with Mazzinghi and Storace in writing additional music to Paisiello's 'Re Teodoro.' He now settled in London, leaving his brother to carry on the Edinburgh business. Three volumes of English songs, several compositions for the theatre (notably the 'Bird Song' in the 'Cabinet,' the music of which was written conjointly with Braham, Davy, Moorehead, &c., and performed in 1802), and other works were written by him at this time. In 1792 Corri's daughter Sophia married the composer Dussek, with whom her father entered into partnership, setting up a short-lived music publishing business in 1797. They issued 'Twenty-four new Country Dances for the year 1797,' and a large collection of favourite opera songs and duets in 4 vols. dedicated to the queen. In a paper read before the Musical Association on 6 Dec. 1880 Mr. W. H. Cummings demonstrated that the work last mentioned contains the first examples published in England of accompaniments fully written out instead of being left to the player to fill in from the figured bars. A 'Musical Dictionary' and the 'Art of Fingering' were issued by the firm during the two years of its existence; in 1800 its affairs were in so bad condition that Dussek found it advisable to quit the country for a time. Corri does not seem to have lost his position in the musical world by this failure. On 22 Jan. 1806 he produced a five-act opera entitled 'The Travellers, or Music's Fascination,' written by Andrew Cherry. This also failed, possibly in consequence of the strangeness of its dramatic construction. Its five acts are laid in Pekin, Constantinople, Naples, Caserta, and Portsmouth successively. The last act opens with an amusing quartet, supposed to be sung by two watchmen, a lady singing the gamut, and her sister singing a 'sprightly song.' At the conclusion of this 'quodlibet' an orchestral passage occurs representing a storm, which leads into Purcell's 'Britons, strike home.' In 1810 he wrote a 'Singer's Preceptor,' in 2 vols., prefixing thereto a biography of himself. With an eye to business he announces at the end of his preface that 'Mrs. Corri also instructs in vocal and instrumental music.' He died on 22 May 1825, having been subject for some time to occasional fits of insanity. His son, Philip Antony, published many songs and pianoforte pieces, and in 1813 did much to promote the foundation of the Philharmonic Society, the prospectus of which was issued by him in conjunction with Cramer and Dance. His name appears as a director for the first few seasons only, as he settled in America shortly after the foundation of the institution. Another son, Montagu P. Corri, wrote incidental music to several plays, e.g. 'The Wife of an Hundred,' 'The Devil's Bridge,' 'The Valley of Diamonds,' &c.; and a third, Haydn Corri, was for many years an esteemed teacher in Dublin. Domenico's brother, Natale, was the father of Signora Frances Corri, who appeared as a mezzo-soprano singer in 1820; another sister, Rosalie, was less successful. This branch of the family went to Italy in 1821, where the more celebrated daughter married a singer named Paltoni, and subsequently appeared in different parts of Europe

with uniform success. Natale died at Trieste in 1823, and a charity concert, got up for the benefit of his daughters, was announced in the 'London Magazine' for April 1823.

CORRIE, ARCHIBALD (1777–1857), agriculturist, was a native of Perthshire, where he was born in 1777. In 1797 he obtained a situation in a nursery near Edinburgh, which he held for some years. Afterwards he became manager of the estate of Annat, Perthshire, farming also on his own account. For many years his agricultural reports contributed to the Scottish newspapers were read with interest in all parts of the kingdom. In his early years he was associated with George Don, who published a 'System of Gardening and Botany' founded on Miller's 'Gardener's Dictionary.' To Loudon's and other magazines Corrie contributed a large number of papers on different departments of agriculture and horticulture, which were of considerable value in advancing these arts. He died at Annat Cottage, near Errol, in 1857, in his eightieth year.

[Gent. Mag. 1857, new ser. vol. iii. pt. ii. p. 344.] T. F. H.

CORRIE, DANIEL, LL.D. (1777–1837), bishop of Madras, was the son of the Rev. John Corrie, for many years curate of Colsterworth and vicar of Osbournby in Lincolnshire, and afterwards rector of Morcott in Rutland. He appears to have received his early education partly at home and partly at the house of a friend of his father in London, whence in October 1799 he went into residence at Cambridge, first at Clare Hall and afterwards as an exhibitioner at Trinity Hall. In 1802 he was ordained deacon, and priest in 1804, and in 1806 was appointed to a chaplaincy in Bengal. While at Cambridge he had come under the influence of Charles Simeon, an influence which appears to have affected the remainder of his life. Reaching Calcutta in September 1806 he became the guest of the Rev. David Brown [q. v.], at whose house he met and formed an intimacy with Henry Martyn. During the following eight or nine years he held various chaplaincies in the north-western provinces, including those of Chunár, Cawnpur, and Agra, in all of them prosecuting missionary work in addition to his duties as chaplain to the British troops. The Agra mission, which still exists under the management of the Church Missionary Society, and also that at Meerut, which Corrie visited in 1814, owe their establishment to his exertions. During a part of his residence at Cawnpur he lived with Henry Martyn, then in very weak health, and about to pay the visit to Persia from which he never returned. In 1815 Corrie was compelled by the state of his health, which had suffered much from the Indian climate, to revisit England, where he received a cordial welcome from the friends of missionary work. Returning to India in 1817 he was promoted, after a short stay at Benares, to the senior chaplaincy at Calcutta, where, first as secretary to the local committee of the Church Missionary Society and afterwards as president of the Church Missionary Association, he continued his active services to the missionary cause. In 1823 he was appointed by Bishop Heber archdeacon of Calcutta, in which capacity the administration of the diocese devolved upon him on three different occasions, first on the death of Bishop Heber, secondly on that of Bishop James, and lastly on that of Bishop Turner. In 1835, Madras and Bombay having been constituted separate sees under the Charter Act of 1833, Corrie was appointed the first bishop of Madras, entering upon his duties on 28 Oct. 1835. He survived his installation little more than fifteen months, dying at Madras after a few days' illness on 5 Feb. 1837; but short as the period was, it was long enough to impress the community of the Madras presidency with a very high estimate of the piety, devotion, and untiring zeal with which he had discharged his duties. The beautiful statue in the cathedral at Madras and the Corrie scholarships in Bishop Corrie's grammar school are worthy memorials of his brief but arduous work in that presidency. Nor was Bengal unmindful of the services rendered by the late archdeacon during a period of nearly thirty years. Monuments in two of the churches in which he had long been accustomed to minister, and scholarships named after him in the Calcutta High School, attested the regard in which he was held. As a missionary chaplain Corrie ranks with Brown, Buchanan, Martyn, and Thomason. Corrie married in 1811 Elizabeth, daughter of Mr. W. Myers of Calcutta; she died at Madras a few months before her husband.

[Memoirs of the Rt. Rev. Daniel Corrie, LL.D., first Bishop of Madras, London, 1847; History of Protestant Missions in India, 1706 to 1882, by the Rev. M. A. Sherring, London, 1884; Ann. Reg. 1837.] A. J. A.

CORRIE, GEORGE ELWES (1793–1885), master of Jesus College, Cambridge, was born at Colsterworth, Lincolnshire, 28 April

1793. His father, John Corrie, then curate of Colsterworth and afterwards vicar of Morcott, Rutlandshire, was a direct descendant of Cluny MacPherson [q. v.], the name having been changed. His mother, Anne MacNab, was allied to the MacNabs of that ilk. He was the youngest of three sons, the eldest being Daniel Corrie, bishop of Madras [q. v.], and the second Richard Corrie, M.D., who after studying medicine took orders and became rector of Kettering, Northamptonshire. They were all educated by their father, under whom George Elwes Corrie acquired hardy habits of life and a keen interest in country pursuits. In October 1813 he entered Catharine Hall, Cambridge. He graduated B.A. in 1817, and took orders. In 1817 he became assistant tutor of his college, and on the resignation of Thomas Turton, afterwards bishop of Ely, succeeded to the tutorship, which he held till 1849.

In 1838 he was appointed Norrisian professor of divinity. He was a diligent student of theology, displayed great research in the history of the church of England and Ireland, and showed peculiar power of sympathy with young men, to whom he was always ready to open his own stores of knowledge. In 1854 he had, in conformity with the rules then in force, to resign his professorship on attaining the age of sixty. While a professor he continued to be a learner; he took lessons in languages, especially Danish and Irish; and he found time for his duties by taking his regular walking exercise before morning chapel.

In 1845 Turton, on becoming bishop of Ely, made Corrie his examining chaplain (an office which he held till 1864), and in 1849 presented him to the mastership of Jesus College. He was vice-chancellor of the university in 1850. In 1851 Turton presented him to the rectory of Newton in the Isle of Ely, where he resided when not engaged in university work. He was an active parish priest, and for many years rural dean. As master of Jesus College, Corrie showed unvarying tact, firmness combined with undeviating courtesy, and lively interest in the younger members of the society. The college rose greatly in reputation during his mastership, and he took a large share in the management of the estates. He had been imbued with patriotic principles in the great wars during his youth, and he was a leader of the conservative party at Cambridge.

Corrie edited the 'Homilies,' 'Wheatly on the Book of Common Prayer,' and Twysden's 'Historical Vindication of the Church of England' for the University Press; and Nowell's 'Catechism' and Latimer's 'Sermons and Remains' for the Parker Society. He published an abridgment of Burnet's 'History of the Reformation,' and, with H. J. Rose, wrote 'Outlines of Theology' for the 'Encyclopædia Metropolitana.' He also wrote 'Historical Notices of the Interference of the Crown with the English Universities,' 'A Concise History of the Church and State of England in conflict with the Papacy' (1874); and a series of five letters in the 'British Magazine' criticising Thomas Moore's 'History of Ireland,' dealing chiefly with the doctrines of the Irish church upon Pelagianism. With his brother Richard he edited the 'Life and Letters' of Bishop Corrie. He was one of the founders and for several years president of the Cambridge Antiquarian Society. He died 20 Sept. 1885.

[Information from Miss Holroyd, Rev. Prof. Lumby, and the present Master of Jesus College.]

CORRIGAN, Sir DOMINIC JOHN, M.D. (1802–1880), physician, son of John Corrigan, a tradesman of Dublin, was born at his father's house in Thomas Street, a long and squalid thoroughfare, which is the way out of Dublin to the south of Ireland, 1 Dec. 1802. After receiving the rudiments of general education at the school attached to Maynooth College, and his first medical instruction from the village doctor, he was sent to Edinburgh and graduated M.D. there in 1825. He returned to Dublin and began practice. In 1833 he became lecturer on medicine in the Carmichael School, and from 1840 to 1866 was physician to the House of Industry hospitals. He attained large practice, and was made physician in ordinary to the queen in Ireland, and in 1866 was created a baronet. He was five times president of the Irish College of Physicians. In 1868 he contested the city of Dublin, and in 1870 was returned to parliament as one of its representatives, and sat till 1874. He supported the popular principles of the day, but had no knowledge of politics, and failed to command attention in the House of Commons. In his later years he suffered from gout, and died of hemiplegia 1 Feb. 1880. As a physician Corrigan has received more praise than is his due. He has been spoken of as the discoverer of the form of valvular disease of the heart known as aortic regurgitation, and as the first describer of the peculiar pulse which accompanies it; but Corrigan's paper 'On Permanent Patency of the Mouth of the Aorta' was published in the 'Edinburgh Medical and Surgical Journal' for April 1832, while the disease had been described more fully by Hodgkin in 1827 and 1829 (*London Medical Gazette*, 7 March 1829), and the pulse by Vieussens in 1715. His paper shows that he

had made some careful observations, but he cannot have made many, for he remarks (p. 244) that 'assurance may be given against any sudden termination,' while the fact is that this form of valvular disease is the commonest morbid appearance associated with sudden and immediate death, and that patients suffering from it are liable to death at any moment. His 'Lectures on the Nature and Treatment of Fever' in Dublin, 1853, support the views then becoming prevalent as to the distinction between typhus and typhoid fever. In 1866 he published some general remarks on cholera, and he wrote a few other medical papers of minor importance. His success was due to his good sense and large practical experience, but he was not a profound physician nor a learned one. He had received little general education, and had no knowledge of the writings of his predecessors, but he was the first prominent physician of the race and religion of the majority in Ireland, and the populace were pleased with his success, and spread his fame through the country, so that no physician in Ireland had before received so many fees as he did.

[Works; Lancet, February, 1880.] N. M.

CORRO, ANTONIO DE, otherwise CORRANUS and BELLERIVE (1527–1591), theologian, was born in 1527 at Seville, his father being Antonio de Corro, doctor of laws. He belonged in early life to an ascetic order (probably the monks of St. Jerome), but renounced the Roman catholic faith when about the age of thirty. This step he ascribes to the influence of certain disclosures made to him by a member of the Spanish inquisition, who also introduced him to the writings of Luther and Bullinger. At this time he seems to have been at Compostella. The next ten years (1558–68) he spent in France and Flanders. Though not formally identifying himself with any protestant communion, he had exercised ministerial functions for five years in the province of Saintonge, when he was excluded by the synod of Loudun. Repairing to Antwerp, he was chosen in 1567 pastor of the Walloon church, but the civil authorities, under Spanish influence, refused to confirm his settlement. In his defence he published a letter, addressed to Philip II of Spain, in which he details the reasons of his change and gives the heads of his religious belief. In December 1567 the Lutherans of Antwerp published their confession of faith. De Corro at once (21 Jan. 1567, i.e. 1568) wrote them a 'godly admonition,' recommending a greater moderation in the matter of Eucharistic doctrine, with a view to protestant unanimity, in accordance with the ideas of John Laski [q. v.] On the arrival of the Duke of Alva at Antwerp in 1568 De Corro came to London with a wife, two children, and two servants, took up his abode in a house belonging to the Duchess of Suffolk in Cripplegate ward, and attached himself to the Italian congregation of the Strangers' Church. Soon after, by favour of Sir William Cecil and the Earl of Leicester, he became pastor of the Spanish congregation. As early as 1563 he had written from France, respecting the printing of a Spanish version of the Bible, to Cassiodoro de Reyna (also a native of Seville), the first pastor of the Spanish congregation in London. But when the letter arrived De Reyna was no longer in London, having fled under a grievous charge, and it would seem that the Spanish congregation had ceased to exist, until the arrival of De Corro with other exiles gave occasion for reviving it. On 16 Jan. 1568 (i.e. 1569) he addressed a letter to Archbishop Parker, accompanied by his two publications in French, which he thought would be good reading for two children of the archbishop, who were then learning that language. Doctrinal differences soon arose between De Corro and his co-presbyter, Girolamo Jerlito, pastor of the Italian congregation, the main charge being that in his teaching, and in a work printed at Norwich, De Corro showed a leaning to Pelagianism. In seven letters De Corro laid the case before Beza at Geneva, who did not like 'the hot, accusing spirit of this Spaniard,' and left the matter in the hands of Grindal, in whom, as bishop of London, was vested the superintendence of the Strangers' Church. Grindal owned the 'good learning' of De Corro, but disapproved 'his spirit and his dealings.' At length in 1570 (before 11 April) he suspended him for slander, at the instance of Jean Cousin, pastor of the French congregation, and the Spanish congregation again came to an end. Cecil stood his friend, and got Sandys, Grindal's successor, to appoint him, in May 1571, Latin reader in divinity at the Temple. He held this post for three years, but did not get on well with Richard Alvey [q. v.], the master of the Temple, and was thought to have discoursed 'not wisely on predestination and suspiciously on Arianism' (TANNER). William Barlow, afterwards archdeacon of Salisbury [q. v.], praises his eloquence and learning, but deems him wanting in respect for recognised authorities, and too great an admirer of Castellio. On 5 March 1575–6 the Earl of Leicester, chancellor of Oxford University, sent letters to the vice-chancellor and convocation asking that he might proceed D.D. without fee. On 2 April convocation granted the request on

condition 'that he purge himself of heretical opinions before the next act.' De Corro had already subscribed the Anglican articles before the privy council, but Dr. Rainolds on 7 June wrote to Humphrey, the vice-chancellor, reviving the charges against De Corro and hinting that he was the source of the heresies of Francesco Pucci, an erratic Florentine who had given trouble to the university in the previous year. After 'severe examination' he was admitted as a divinity reader in 1579; yet Wood finds no record of his obtaining an Oxford degree. As he styles himself S.T.P. in a publication as early as 1574, he may have had a foreign or a Lambeth degree. At Oxford De Corro lived as a student in Christ Church, and became reader of divinity to the students in Gloucester, St. Mary, and Hart Halls. He was 'censor theologicus' at Christ Church, 1581-5, and matriculated as a member of Christ Church in 1586. In 1585 he obtained the prebend of Harleston in St. Paul's, London.

The charge of heresy was reiterated against him at Oxford in 1582, and has clung to his memory. Bonet-Maury places him, on dubious grounds, among those who have rejected the doctrine of the Trinity. His published articles of faith (1574) are quite orthodox on that doctrine. Some of his London congregation may have been anti-trinitarian, but he does not seem to have been personally heterodox, except in the article of predestination and cognate doctrines, as held by Calvinists. He was a man of open mind, and had his temper been less hot and his disposition more conciliatory, his career might have been brighter. De Corro died in London about 30 March 1591, and was buried at St. Andrew's (perhaps St. Andrew Wardrobe). His wife (Mary) and daughter (Susan), who both survived him, were of no good repute, according to Wood. His sons John and James predeceased him.

De Corro's writings show signs of considerable attainment; his later books are compiled mainly from his lectures. He published: 1. 'Lettre envoyée à la Maiesté du Roi des Espaignes,' &c., 1567, 8vo. Also in Latin (1567); and in English (1577). 2. Letter (in French) to pastors of Antwerp, 1568; also published in Latin; translated by Geffray Fenton, with title, 'An Epistle, or godlie Admonition . . . sent to the Pastours of the Flemish Church in Antwerp (who name themselves of the confession of Auspurge),' &c., London, 1569, 8vo; 1570, 8vo. 3. 'Tableau de l'Œuvre de Dieu,' &c., printed at Norwich, Strype implies that it was in print before 1568, but this does not seem probable. In Latin, 'Tabula Divinorum Operum,' &c., London, 1574, 8vo; 1584, 8vo. In English, 'Tables of God's Works;' also in Flemish. 4. 'Dialogus Theologicus, quo epistola D. Pauli ad Romanos explanatur,' &c., London, 1574, 8vo; Frankfort, 1587, 8vo. In English, 'A Theological Dialogue,' &c., 1575, 16mo; 1579, 8vo (has at the end his articles of faith). 5. 'Salomonis Concio . . . quam Hebræi Cohelet, Græci et Latini Ecclesiasten vocant, in Latinam linguam . . . versa, et ex ejusdem prælectionibus paraphrasi illustrata,' &c., London, 1579, 8vo; 1581, 8vo; Frankfort, 1618, 8vo (with analysis by Abraham Scultetus). Abridged by Pitt, 'Sermons on Ecclesiastes,' 1585, 8vo. 6. 'The Spanish Grammer, with certeine rules for teaching both the Spanish and French tongues,' London, 1590, 8vo (translated from De Corro's Spanish by John Thorie, who added a Spanish dictionary).

[The best account of De Corro is by Christiaan Sepp, in Polemische en Irenische Theologie, Leyden, 1881. Wood's Athenæ Oxon. (Bliss), 1813, i. 578; Wood's Hist. and Antiq. Univ. Oxford (Gutch), 1796, ii. 179 sq., 195; Tanner's Biblioth. 1748, p. 200; Strype's Grindal, 1821, pp. 185 sq. 217 sq.; Strype's Parker, 1821, ii. 402 sq.; Strype's Annals, 1824, i. pt. i. p. 355, iv. 570; McCrie's Hist. A. G.

CORRY, HENRY THOMAS LOWRY (1803–1873), politician, second son of the second Earl of Belmore, by Juliana, second daughter of Henry Thomas, second earl of Carrick, was born in Dublin on 9 March 1803. He was educated at Christ Church, Oxford, where he proceeded B.A. 1823. In 1825 he entered the House of Commons as conservative member for Tyrone county, which before and after the union had been represented by members of his family. His connection with this constituency, extending over forty-seven years, continued unbroken till his death, which took place at Bournemouth on 6 March 1873. He was comptroller of the household in Sir Robert Peel's first administration, 1834–5, and in the latter year was sworn a member of the privy council. On the return of his party to office he served as a junior lord of the admiralty, 1841–5, and latterly, 1845–6, as secretary to the same department. He was not included in the conservative government of 1852, but in Lord Derby's second administration, 1858–9, he resumed his last post at the admiralty. In 1866–7 he was vice-president of the council on education. The resignations of Lord Cranbourne, Lord Car-

narvon, and General Peel on the Reform Bill necessitating a reconstruction of the ministry, he was nominated March 1867 a first lord of the admiralty, with a seat in the cabinet; this office he held till the resignation of the government December 1868. Except on subjects connected with his department he took little part in debate, and he was a plain and simple rather than a brilliant speaker. As an administrator he had the confidence of both sides of the house, and his knowledge of naval affairs was unquestioned. He married, 6 March 1830, Harriet Anne, daughter of the sixth Earl of Shaftesbury, and by her had two sons and two daughters. His second son, Mr. Montagu Corry, private secretary to Lord Beaconsfield, was raised to the peerage (1880) as Baron Rowton, and died in 1903. Corry was author of 'Naval Promotion and Retirement, a letter to the Right Hon. S. P. Walpole,' 1863, and of three 'Speeches on the Navy,' with preface by Sir J. C. D. Hay, Bart, M.P., 1872.

[Times; Standard, 7 March; Spectator, 8 March 1873.] J. M. S.

CORRY, ISAAC (1755–1813), Irish politician, born in Newry in 1755, son of Edward Corry, a merchant in Newry and sometime M.P. for that town, was educated at Trinity College, Dublin, and entered as a student at the King's Inns, but he never became a barrister. In 1776 he was elected M.P. for Newry in his father's room. He soon made his mark in the Irish House of Commons as a ready speaker and distinguished himself in the volunteer movement of 1783, when he played a part on the popular side, and acted as a delegate in the convention. He was a purely professional politician, and as he was by no means a rich man he was bought over by the government of the Marquis of Buckingham, and appointed surveyor-general of the ordnance in Ireland in 1788. He now became a warm supporter of the administration, and in 1789 was promoted to be a commissioner of the revenue for his fidelity during the debates on the regency in the Irish parliament. When the question of the union came on after the suppression of the insurrection of 1798, Corry came to the front, and on the resignation of Sir John Parnell he was sworn of the Irish privy council and made chancellor of the Irish exchequer. In the debates on the question in the session of 1799 he was the principal speaker on behalf of the measure—for Lord Castlereagh, who had charge of it, was notoriously a bad orator—and as a reward he was appointed surveyor-general of crown lands and manors in Ireland for life. In the session of 1800, the last session of the Irish parliament, Corry was again the chief speaker on the government side, and answered Grattan when that great orator took his seat in order to oppose the union on 16 Jan. 1800. The opposition between Grattan and Corry became more and more bitter, until at last, on 18 Feb., after Corry had accused Grattan of being familiar with traitors and conniving at their plans, Grattan answered him in a speech 'full of foul and opprobrious epithets, such as it was not possible for a gentleman to submit to' (*Cornwallis Correspondence*, iii. 195). Corry therefore sent a hostile message to him by Colonel Cradock, afterwards Sir John Francis Caradoc, Lord Howden [q.v.], and a duel took place between the two opponents at Ball's Bridge before the sitting of the house was over. At the first exchange of shots Corry was wounded in the arm, but he insisted on a second fire, when Grattan fired over his head, though he declares he might easily have killed him. It was absurdly said that this duel was the first of a series determined on by the castle authorities which was to remove the prominent members of the opposition. Corry lost his seat for Newry for the first united parliament, but was elected for Dundalk, for which he sat until 1802, when he was successful at Newry. He retained his office as chancellor of the Irish exchequer until 1804, when he was succeeded by the Right Hon. John Foster, and was sworn of the English privy council; but he did not succeed in the English House of Commons, where, according to the younger Henry Grattan, 'his tones altered, he was cringing and creeping, begging pardon of the house for taking up their time with Irish affairs' (*Life and Times of Grattan*, v. 106). After leaving office in 1804 he was neglected by the government, who left him to die unregarded, according to the same authority. He was defeated at Newry in 1806 and 1807, but was elected in the former year for Newport (I.W.) He lived to repent the union, which had destroyed his political importance, and died unmarried at his house in Merrion Square, Dublin, on 15 May 1813. In the 'Life and Times of Grattan' (v. 104–6), it is said: 'He was unquestionably a man of talents . . . In early life he began with the people, though he ended against them, and like most renegades . . . he ran violently into the other extreme. . . . He was bribed by the court and his wants compelled him to sell the country. . . . In early life he was a close acquaintance of Mr. Grattan, and a frequent visitor to Tinnehinch . . . As a person of no property, he was over-placed and over-salaried. . . . As a speaker he was short, pointed, and neat, and what he said

was delivered with elegance and address; his manner was graceful and better than his matter; his person was pleasing, and his voice clear and harmonious; his invectives were good, and he possessed much spirit; in personality he was better than in argument; he was a brave man but a bad reasoner, and was always ready to back what he said with his sword.'

[For biographical details we are indebted to Mr. Joseph Foster, the genealogist; for Corry's career during the debates on the union see Life and Times of Grattan, Sir Jonah Barrington's Memoirs, and Coote's History of the Union. Gent. Mag. 1813, pt. i. 591, gives date of death only.] H. M. S.

CORRY, JOHN (*fl.* 1825), topographer and miscellaneous writer, was a native of the north of Ireland and a self-taught man. On reaching manhood he went to Dublin, where he followed the profession of a journalist. About 1792 he fixed his residence in London, and there found constant employment for his versatile pen. Most of his works were published anonymously. Besides editing a periodical, he furnished the letterpress for the 'History of Liverpool,' 4to, Liverpool, 1810, published by Thomas Troughton; wrote vol. i. of the 'History of Bristol,' 2 vols. 4to, Bristol, 1816, the second volume being supplied by the Rev. John Evans; and the next year published a 'History of Macclesfield,' 8vo, London, Manchester [printed], 1817. A more ambitious undertaking was the 'History of Lancashire,' 2 vols. 4to, London, 1825, with a dedication to George IV dated 22 Sept. of that year. After this nothing is known of Corry's personal history. He was also the author of: 1. 'Poems,' 12mo [Dublin?], 17—. 2. 'The Adventures of Felix and Rosarito,' 12mo, London, 1782. 3. 'The Life of George Washington, 12mo, London, 1800. 4. 'The Detector of Quackery,' 12mo, London, 1801 (new edition under the title of 'Quack Doctors dissected,' 12mo, London, Gloucester [printed 1810]). 5. 'A Satirical View of London,' 8vo, London, 1801, which came to a fourth edition in 1809. 6. 'Edwy and Bertha,' 12mo, London, 1802. 7. 'Memoirs of Alfred Berkeley,' 12mo, London, 1802. 8. 'Tales for the Amusement of Young Persons,' 12mo, London, 1802. 9. 'The Life of William Cowper,' 12mo, London, 1803. 10. 'The Life of Joseph Priestley,' 12mo, Birmingham, 1804 (another edition appeared in the same year). 11. 'Sebastian and Zeila,' 12mo, London [1805?]. 12. 'The Suicide; or, the Progress of Error,' 12mo, London [1805?]. 13. 'The Mysterious Gentleman Farmer,' 3 vols. 12mo, London, 1808. 14. 'Strictures on the expedience of the Addingtonian Extinguisher' [i.e. Lord Sidmouth's Protestant Dissenting Bill], 12mo, Macclesfield, 1811. 15. 'The Elopement . . . Third edition (the History of Eliza, &c.),' 12mo, London [1810?]. 16. 'The English Metropolis; or, London in the year 1820,' 8vo, London, 1820. 17. 'Memoir of John Collier' ('Tim Bobbin'), prefixed to an edition of his 'Works,' 8vo [Manchester? 1820?], and also to the quarto edition published at Manchester in 1862.

[Dict. of Living Authors (1816), p. 76; Fishwick's Lancashire Library, pp. 53–4; Brit. Mus. Cat.] G. G.

CORSER, THOMAS (1793–1876), editor of 'Collectanea Anglo-Poetica,' third son of George Corser of Whitchurch, Shropshire, banker, and his wife Martha, daughter of Randall Phythian of the Higher Hall, Edge, Cheshire, was born at Whitchurch in 1793. From Whitchurch school he was removed in 1808 to the Manchester grammar school, whence in May 1812 he was admitted a commoner of Balliol College, Oxford, taking with him one of the school exhibitions. He graduated B.A. in 1815, and M.A. in 1818. It was during his residence at Oxford, and through his intimacy with Dr. Henry Cotton [q. v.], sub-librarian of the Bodleian, that his love of early English poetry and Elizabethan literature was formed and his bibliographical tastes encouraged. In the early part of 1816 he was ordained to the curacy of Condover, near Shrewsbury, and in the following year received priest's orders, holding also the chaplaincy of Atcham Union at Berrington. From 1819 to 1821 he served as curate of the extensive parish of Stone, Staffordshire, and for the next year and a half was curate of Monmouth. Here, while meditating the acceptance of the English chaplaincy at Antwerp, he accepted the offer of the curacy of Prestwich, near Manchester, which proved the turning-point of his life. In 1826, while curate of Prestwich, he obtained the incumbency of All Saints' Church, Stand, Manchester, where he was admitted on 8 Sept. and continued for nearly fifty years. By his care and exertions the parish was early supplied with large and flourishing schools. In 1828 he succeeded to the vicarage of Norton-by-Daventry in Northamptonshire, but there being no residence he continued to remain at Stand. He was one of the founders of the Chetham Society in 1843. Of the four works edited by Corser for the society—'Chester's Triumph' (1844), 'Iter Lancastrense' (1845), Robinson's 'Golden Mirrour,' and 'Collectanea Anglo-Poetica'—the most important are the 'Iter' and the 'Collectanea.' The first is

an interesting account by Richard James, in verse, of his visit to Lancashire in 1636, illustrated by the editor's research and diligence. The second is an alphabetical account, with extracts from each author, and elaborate biographical and bibliographical notices of the editor's magnificent collection of early English poetry which he had begun to form at an early age. The first part was issued in 1860. The rector's advanced age and infirmities interfered with the progress of the undertaking on the original scale beyond the letter C, which was concluded at the fourth part (1869). But six parts (1873–1880) were subsequently issued on a briefer plan. Corser died after the fifth part was published in 1873, and James Crossley edited the remainder. The work is a very valuable contribution to English bibliography. The collection of books which formed the basis of this work was sold in London in portions at different dates, from July 1868 to 1874, and realised upwards of 20,000*l.* Mr. Henry Huth purchased some of the most valuable volumes. Corser was also a member of the Spenser, Camden, Surtees, Percy, and Shakespeare societies, and was elected a F.S.A. in 1850. His name appears in the list of those who signed the remonstrance on the Purchas judgment in 1872. In 1867 he suffered from an attack of paralysis; his eyesight failed, and he could only write with his left hand. He died at Stand rectory on 24 Aug. 1876.

He married, on 24 Nov. 1828, Ellen, eldest daughter of the Rev. James Lyon, rector of Prestwich. She died on 25 April 1859.

[Smith's Manchester School Register, 1874, iii. 32–6; Manchester Courier, 28 Aug. 1876.]

G. C. B.

CORT, HENRY (1740–1800), ironmaster, was born at Lancaster in 1740, where his father carried on the trade of a mason and brickmaker. He has been sometimes, not very correctly, called the 'Father of the Iron Trade.' Dud Dudley, whose 'Metallum Martis' was printed in 1665, has a much stronger claim to that title. Cort appears to have raised himself by his own unaided efforts to a position of considerable respectability. He was first established as a navy agent in Surrey Street, Strand, in 1765, and he is said to have realised considerable profits.

About this time there was a prevailing belief that British iron was very inferior to Russian, the former being prohibited for government supplies. The Russian government raised the price from 70 to 80 copecs to 200 to 220 copecs a ton. Cort probably made experiments on iron which convinced him that British iron might be considerably improved. What they were is unknown. In 1775 he gave up his business as a navy agent, and leased certain premises at Fontley, near Fareham, where he had a forge and a mill.

In 1784 Cort patented an invention, which consisted essentially in subjecting pig-iron, as obtained from the blast furnace, in a reverberating furnace heated by flame until it was decarbonised by the action of the oxygen in the atmospheric air circulating through it, and converted into malleable iron. This process is known as 'puddling,' and certainly to it is due the rapid increase in the manufacture of merchant iron in this country.

In the previous year, 1783, Cort patented the so-called 'grooved rolls,' now known as 'puddle rolls,' as they are used for drawing out the puddled ball into bars, &c. These inventions are intimately associated in the development of the iron trade. The claims of Cort have been disputed. In 1812 Mr. Samuel Homfray stated before a committee of the House of Commons that a process called 'buzzing' or 'bustling' had been in use before the date of Cort's patent, and that it was an analogous process to puddling, and he also implied that grooved rolls had been previously employed by John Payne in 1728. Payne certainly in his patent specification describes something like grooved rolls, but there is no evidence that he ever used them.

Cort's discovery made way but slowly. He is said to have expended the whole of his private fortune, exceeding 20,000*l.*, in bringing his process to a successful issue. Entering into extensive contracts to supply the navy with rolled iron, for which he put up works at Gosport, he was compelled to seek for more capital, and he entered into an agreement with Mr. Adam Jellicoe, deputy-paymaster of the navy, that on the security of an assignment of his patent rights he should advance 27,000*l.*, receiving therefor one-half of the profits of the iron manufactory. Jellicoe died suddenly in 1789, a defaulter to the extent of 39,676*l.* It was then found that the capital he had advanced to Cort had been withdrawn from the cash balances lying in his hands. The navy board at once issued processes against the firm of Cort & Jellicoe, and against the private estate of the late Mr. Jellicoe. This led to the complete ruin of Cort; an enormous amount of property being absolutely sacrificed. In 1790 he offered his services to the navy board, but they were not accepted. In 1791 he made a similar application to the commissioners of the navy, which only resulted in an acknowledgment of the utility of Cort's inventions. In 1794 the lords of the treasury, on the representation of Mr. Pitt, granted Cort an annual

pension of 200*l.*, which by deductions was reduced to about 160*l.* After the death of Cort the members of his family received insignificant pensions from the government. When it is remembered that the production of pig-iron in these islands was in 1740 only 48,000 tons, that in 1884 the produce of our blast furnaces amounted to 7,811,727 tons, and that in the latter year 4,577 puddling furnaces—entirely the result of Cort's invention—made returns, it must be admitted that the story does not reflect any credit on the government of this country.

Cort died in 1800, and was buried in Hampstead churchyard. He left a widow and ten children, who, on the representation of the comptroller of the navy, were allowed an income of about 100*l.* In 1816, on the death of Mrs. Cort, two unmarried daughters were each granted an annual pension of 20*l.*, and in 1856 Lord Palmerston, in answer to 'claims on the bounty of the nation' made in favour of the only surviving son, granted him a pension of 50*l.*

R. H–T.

CORVUS, JOANNES (*fl.* 1512–1544), portrait painter, has recently been identified with Jan Rave, a native of Bruges, received master in that town in 1512, who subsequently came to England, and, like many of his fellow-countrymen, latinised his name. Vertue was the first to discover the fact of his existence, by finding the inscription 'Joannes Corvus Flandrus faciebat' on the frame of a portrait of Bishop Fox, the founder, at Corpus Christi College, Oxford, which he engraved for Fiddes's 'Life of Cardinal Wolsey.' In 1820 this portrait was placed in a new and gorgeous frame, and the old frame was destroyed. Vertue's statement is fortunately authenticated by the existence of a portrait of Mary Tudor, the daughter of Henry VII, which has a frame and inscription similar to that of Bishop Fox, as described by Vertue. This picture, after being 'restored' extensively while in the hands of dealers, was in the possession of the Des Vœux family, and subsequently in the Dent collection. In this portrait a peculiarity of execution occurs which is characteristic of Corvus's work; there is a groundwork of gold showing through the colour of the dress, which is painted over it. This makes it certain that the striking portrait of Princess (afterwards Queen) Mary in the National Portrait Gallery (dated 1544) is the work of Corvus, and it may safely be identified with the entry in the 'Privy Purse Expenses of the Princess Mary' (edited by Sir F. Madden), '1544: It^m^, p^d^ to one John that drue her grace in a table, v li.' The portrait of Henry Grey, duke of Suffolk, in the same collection, may for similar reasons be ascribed to Corvus, who can claim a high place in the ranks of the portrait painters of that age.

Scharf, F.S.A., on some of the Painters contemporary with Holbein; Cat. of the National Portrait Gallery, 1884; information from George Scharf, C.B., F.S.A.] L. C.

CORY, ISAAC PRESTON (1802–1842), miscellaneous writer, was a fellow of Caius College, Cambridge, proceeding B.A. in 1824 and M.A. in 1827. He was the author of: 1. 'Ancient Fragments of the Phœnician, Chaldean, Egyptian, Tyrian, Carthaginian, Indian, Persian, and other writers, Greek and Latin,' 2nd edit. 1832. 2. 'Metaphysical Inquiry into the Method, Objects, and Result of Ancient and Modern Philosophy,' 1833. 3. 'Chronological Inquiry into the Ancient History of Egypt,' 1837. 4. 'Practical Treatise on Accounts, exhibiting a view of the discrepancies between the practice of the Law and of Merchants; with a plan for the Amendment of the Law of Partnership,' 1839. He died at Blundeston, Suffolk, on 1 April 1842.

[Annual Register, lxxxiv. 261; Brit. Mus. Cat.; Notes and Queries, 5th ser. iv. 415.]

CORYATE, GEORGE (*d.* 1607), writer of Latin verse, was born in the parish of St. Thomas, Salisbury, whence he proceeded to Winchester School, and from there was admitted probationary fellow of New College, Oxford, 15 Dec. 1560. He was admitted to the B.A. degree in March 1564, and incepted as M.A. in July 1569. In the following year he became rector of Odcombe in Somersetshire, and thereupon resigned his fellowship. He appears to have had the knack of writing Latin verses from boyhood, and on the occasion of Queen Elizabeth visiting Winchester in August 1560, he was either set, or set himself, to write a copy of trumpery elegiacs which should be fixed on the door of the palace of the Bishop of Winchester. If any

serious interpretation is to be found for the words prefixed to another copy of verses which follows, the queen gave the youth five pounds for his pains; whereupon he wrote another poem recommending her majesty to marry without delay. He can hardly have been more than fourteen years old when he tendered this piece of advice. While at Oxford he was evidently in needy circumstances, and in great measure had to live by his wits. He translated the whole book of psalms into Latin verse, a performance which happily was never printed, and has perished, but its completion was the occasion of another letter to Queen Elizabeth. He seems to have had no scruple about writing Latin verses to the nobility and others from whom there was any hope of getting a *douceur*. Once, at least, he addressed Lord Burghley, who sent him forty shillings in acknowledgment. On the occasion of the death of William, earl of Pembroke, he composed a silly elegy upon the deceased peer, whose son, Henry, lord Pembroke, made him his chaplain. At another time he sent some verses to the Lord-keeper Puckering, as well as to Archbishop Whitgift, besides writing epitaphs on Bishop Jewell and Archbishop Piers of York. His son inherited from him a considerable spice of the cunning and impudence which characterised that eccentric adventurer. He is registered as having 'supplicated' for the B.D. degree in July 1592, and as New College men were exempt from 'supplication,' this may have been a mistake of the registrar for Coryate's actual graduation. He was presented to the prebendal stall of Warthill in the cathedral of York, 17 Jan. 1594, but never rose to higher preferment. He died in the parsonage house at Odcombe, 4 March, 1606-7; 'whereupon his son Tom, upon some design, preserving his body from stench above ground, till the 14th April following, 'twas then buried in the chancel of the church at Odcombe.' He left behind him a widow, Gertrude, of whose parentage nothing is known. She survived her husband nearly forty years, and was buried near him 3 April 1645.

[Wood's Athenæ Oxon. (Bliss), i. 774; Register of the Univ. of Oxford (Boase), Oxf. Hist. Soc. i. 254; Le Neve's Fasti (Hardy); Posthuma Fragmenta Poematum Georgii Coryati, to be found at the end of some copies of Tom Coryate's Crudities.] A. J.

CORYATE, THOMAS (1577 ?–1617), traveller, son of the Rev. George Coryate, [q. v.], rector of Odcombe, Somersetshire, by Gertrude his wife, was born in the parsonage house at Odcombe, about 1577, and entered at Gloucester Hall in the university of Oxford in 1596. He left the university without taking a degree, and appears to have led an aimless life for a few years, till, on the accession of James I, he became a hanger-on of the court, picking up a precarious livelihood as a kind of privileged buffoon. Gifted with an extraordinary memory, and being no contemptible scholar, with what Fuller calls 'an admirable fluency in the Greek tongue,' and a certain sort of ability which occasionally showed itself in very pungent repartee, and an appearance which must have been indescribably comic, he soon attracted notice, 'indeed was the courtiers' anvil to try their wits upon; and sometimes this anvil returned the hammers as hard knocks as it received, his bluntness repaying their abusiveness. He carried folly,' says Fuller '(which the charitable called merriment), in his very face. The shape of his head had no promising form, being like a sugar-loaf inverted, with the little end before, as composed of fancy and memory, without any common sense.' When a separate establishment was set up for the household of Prince Henry and his sister, the Princess Elizabeth, Coryate obtained some post of small emolument which brought him into familiar relations with all the eminent men of the time, who appear to have amused themselves greatly at his expense. Prince Henry had a certain regard for him, and allowed him a pension. Always provided that they made it worth his while, Coryate had no objection even to the courtiers playing practical jokes upon him. On one occasion they shut him up in a trunk, and introduced him in a masque at court, much to the delight of the spectators (Nichols, *Progresses of James I*, ii. 400). The incident is alluded to by Ben Jonson and other writers of the time. It is probable that he inherited some little property on the death of his father, for within a year of that event he had determined to start on his travels. He sailed from Dover on 14 May 1608, and availing himself of the ordinary means of transit, sometimes going in a cart, sometimes in a boat, and sometimes on horseback, he passed through Paris, Lyons, and other French towns, crossed the Mont Cenis in a *chaise à porteurs* on 9 June, and, after visiting Turin, Milan, and Padua, arrived at Venice on the 24th. Here he stayed till 8 Aug., when he commenced his homeward journey on foot. He crossed the Splugen, passed through Coire, Zurich, and Basle, and thence sailed down the Rhine, stopping at Strasburg and other places, and reached London at last on 3 Oct., having travelled, according to his own reckoning, 1,975 miles, the greater part of which distance he had covered on foot, and having visited in the

space of five months forty-five cities, 'whereof in France five, in Savoy one, in Italy thirteen, in Rhœtia one, in Helvetia three, in some parts of High Germany fifteen, in the Netherlands seven.' Notwithstanding the novelty of this strange expedition and the very large amount of valuable information which he had gathered in his travels, Coryate found it hard to get a bookseller who would undertake the publication of his journal; and as late as November 1610 it seemed doubtful whether it would be printed at all. But Coryate was not the man to be discouraged or to be easily turned from his purpose. He applied to every person of eminence whom he knew, and many whom he can scarcely have known at all, to write commendatory verses upon himself, his book, and his travels, and by his unwearied pertinacity and unblushing importunity contrived to get together the most extraordinary collection of testimonials which have ever been gathered in a single sheaf. More than sixty of the most brilliant and illustrious *litterati* of the time were among the contributors to this strange farrago, the wits vying with one another in their attempts to produce mock heroic verses, turning Coryate to solemn ridicule. Ben Jonson undertook to edit these amusing panegyrics, which actually fill 108 quarto pages. Prince Henry was applied to to further the printing of the book, and the volume was published in quarto by W. S[tansby?] in 1611. With the commendatory verses and the posthumous poems of the author's father, George Coryate, it contained nearly eight hundred pages. The title ran: 'Coryats Crudities. Hastily gobled up in Five Moneths Travells in France, Savoy, Italy, Rhetia cõmonly called the Grisons country, Helvetia alias Switzerland, &c., &c.,' together with 'a most elegant Oration, first written in the Latine tongue by H. Kirchnerus . . . now distilled into English spirit through the Odcombian Limbecke;' and 'Another, also composed by the Author of the former, in praise of travell in Germanie in particular.' It was illustrated by engravings on copper and steel, which have now become extraordinarily valuable. The folded frontispiece and the large and careful copperplate of Strasburg Cathedral are especially rare. The book seems to have had a large sale. In fact it was the first, and for long remained the only, handbook for continental travel; and though the grotesque collection of commendatory verses went far to get for the work a character which it did not deserve of being only a piece of buffoonery from beginning to end, it is quite plain that there were those who soon got to see its value. Perhaps of no book in the English language of the same size and of the same age is it possible to say that there are not two perfect copies in existence. At the end of one of the British Museum copies is an autograph letter from Coryat to Sir Michael Hickes, dated 'from my chamber in Bowelane this 15th November 1610,' which was printed in Brydges's 'Censura Literaria.' Two appendices to the 'Crudities,' also issued in 1611, are equally rare. They are: 'Coryats Crambe, or his Colwort twise sodden and now served in with other Macaronicke dishes as the second course to his Crudities,' Lond. W. Stansby, 4to; and 'The Odcombian Banquet, dished foorth by T. the Coriat and served in by a number of Noble Wits in prayse of his Crudities and Crambe too. Imprinted for T. Thorp,' Lond. 4to.

In 1612 Coryate started again on his travels. Before doing so he repaired to his native place, and there delivered a valedictory oration at the market cross, announcing his intention of being absent for ten years, and formally hanging up in the church at Odcombe the shoes in which he had walked from Venice. These shoes had already become celebrated, and appear in a droll woodcut, in which they are drawn bound together by a laurel wreath. They serve as an illustration of some humorous verses by Henry Peacham, author of the 'Complete Gentleman,' among the 'Panegyricke Verses' prefixed to the 'Crudities.' The shoes were still hanging up in Odcombe Church at the beginning of the eighteenth century. Coryate sailed first to Constantinople; visited Greece and Asia Minor; got a passage from Smyrna to Alexandria; went up the Nile as far as Cairo, returned to Alexandria; proceeded thence to the Holy Land, which he traversed from the Dead Sea to the Lebanon; joined a caravan that was on its way to Mesopotamia; stood upon the mounds of Nimroud; thence made his way through Persia to Candahar; managed to reach Lahore; and arrived safely at Agra, where he was well received by the English merchants who had a 'factory' there. He reached Agra in October 1616. During the four years that he had been in the East, Coryate had learned Persian, Turkish, and Hindustani. On one occasion falling in with Sir Thomas Roe, who was the English ambassador at the court of the Great Mogul, Coryate obtained an audience of the mighty potentate, and delivered an oration in Persian. He sent home letters to his friends from time to time as opportunity occurred. One set of them was published in 1616, entitled 'Letters from Asmere, the Court of the Great Mogul, to several Persons of Quality in England,' in which, in a rather well drawn and well executed woodcut which serves as a frontispiece, he appears riding on an elephant. His last

letter ('Mr. Thomas Coriat to his Friends in England sendeth greeting, from Agra .... the last of October 1616') was printed in 1618. There are some other pieces of his in 'Purchas his Pilgrimes,' published in 1625. He lived about a year after reaching Agra, but his constitution, naturally a very strong one, gave way under the hospitalities which were shown him when he came among his own countrymen once more in the Indian frontiers, and after receiving one or two serious warnings he died of 'a flux' at Surat in December 1617. A humble tumulus marking the place of his burial was shown half a century afterwards. It is described in Sir Thomas Herbert's 'Travels' (1634). The fame of Tom Coryate produced at least one imitator, even in his lifetime, in the person of William Lithgow [q.v.] Considering how faithful and instructive an account of the chief cities of Europe during the seventeenth century is to be found in his narrative, and how simple and lucid his style is when he is not intentionally fooling, it is strange that Coryate's 'Crudities' should not have been more continuously popular. It was reprinted in 1776 in three volumes, and in 1905 in two volumes.

[The fullest account of Coryate's life is to be found in Wood's Athenæ Oxon. (Bliss), ii. 208. Fuller gives a notice of him in his Worthies of Somersetshire. See too Nichols's Progresses of James I, ii. 400 *n*, and the references there given. There is a pretty full list of his printed works in the Catalogue of English books printed before 1640 in the library of the British Museum, issued in 1884, and a careful description of the Crudities in W. C. Hazlitt's Handbook of Early English Literature, 1867. One copy of the Crudities now in the British Museum was a presentation copy from the author to Prince Henry. The copy in the Chetham Library is said to be the only perfect copy of the book in existence.] A. J.

CORYTON, WILLIAM (*d.* 1651), politician, eldest son of Peter Coryton of Coryton and Newton Ferrars, Devonshire, by Joan, daughter of John Wreye of Militon, Cornwall, was appointed vice-warden of the stannaries in 1603. He was returned to parliament for the county of Cornwall in 1623, and sat for Liskeard in the first and for the county of Cornwall in the second parliament of 1625. In July 1627 he was arrested for refusing to subscribe the forced loan of that year, and lodged in the Fleet prison, where he remained until March 1627-28, when, in view of the opening of parliament, he was released. His place of vice-warden of the stannaries had in the meantime been given to John, afterwards Lord Mohun (Forster, *Life of Sir John Eliot*, i. 394). Again returned to parliament for the county of Cornwall in 1628, he spoke in the debate on religious grievances on 27 Jan. 1628-9, in that on tonnage and poundage which followed, and in other debates. His tone was studiously moderate. He was present on the memorable occasion (2 March 1628-9) when, Sir John Eliot having read a remonstrance on the subject of tonnage and poundage, the speaker (Finch) refused to put it to the house, and rising to dissolve the assembly was compelled to keep his seat by Denzil Holles and Benjamin Valentine while resolutions against Arminianism and illegal exactions were read and declared carried. Coryton was subsequently charged with having aided and abetted Eliot, Hollis, and the rest, and even with having assaulted Francis Winterton, member for Dunwich, Suffolk. He was summoned with the other 'conspirators' before the Star-chamber, and appeared, but refused to plead on the ground of privilege of parliament. He was accordingly committed a close prisoner to the Tower. An application for a habeas corpus made on his behalf in the following May was refused. He made submission, however, was released, and reinstated in his office in the stannaries court at some date prior to 16 Jan. 1629-30 (*ib.* ii. 325). His administration of justice in the stannaries court gave much dissatisfaction to suitors, and in or about 1637 he was arrested on a charge of false imprisonment (*Cal. State Papers*, Dom. 1637, p. 244). The matter, however, was not pressed, and on his release he resumed his judicial duties.

He was returned to the first parliament of 1640 for Grampound, and to the Long parliament for the same place; but being found guilty on petition of falsifying the returns for the borough of Bossiney, of which he was mayor, and also of maladministration in the stannaries court, he was 'not admitted to sit.' At the same time he was removed from the office of vice-warden of the stannaries, and also from the stewardship of the duchy and deputy-lieutenancy of the county of Cornwall which he then held. He died on 1 May 1651, and was buried in the church of St. Mellion, near Plymouth. A rhyming inscription on his tomb describes him as

> Both good and great, and yet beloved;
> In judgment just, in trusts approved.

By his wife Elizabeth, daughter of Sir John Chichester de Raleigh, who survived him, dying on 26 Jan. 1656-7, he had four sons and seven daughters. His son and successor, John, was created a baronet on 27 Feb. 1661-2.

COSBY, FRANCIS (*d.* 1580), Irish general, settled in Ireland in Henry VIII's reign. In 1548 Bellingham, the lord deputy, acknowledged the resource and courage displayed by Cosby in attacking the marauders who infested the boundaries of the English pale, and ten years later Sussex was as enthusiastic in his commendation. In 1558 Cosby was appointed general of the Kerne, and in 1562 was granted the suppressed abbey of Stradbally in Queen's County. In 1565 he became governor of Maryborough, and seneschal of Queen's County. He helped to massacre, although the amount of his responsibility is doubtful, many of the O'Mores at Mullagh, near Athy, in 1567, who had been summoned to the fortress on avowedly peaceful business. (The date 1577 in the 'Annals of the Four Masters' is corrected to 1567 in the 'Annals of Lough Cé.') Cosby was not successful in repressing disorder in Queen's County. Rory Oge O'More was continually threatening him, and took his eldest son prisoner in 1577. The murder of Rory in the following year relieved Cosby of his chief difficulty, but the outbreak of the Desmond rebellion in 1580 caused him new anxieties, and he was killed by the rebels at the battle of Glenmalure, 25 Aug. 1580. He married Elizabeth Palmer, by whom he had three sons, Alexander, Henry, and Arnold, and one daughter. ALEXANDER succeeded to the estates, received additional grants in Queen's County, and was, with his son Francis, killed at the battle of Stradbally Bridge. The estates subsequently passed to Richard, another son of Alexander, whose descendants still possess them. ARNOLD, Francis Cosby's second son, served under the Earl of Leicester in the Low Countries.

[Burke's Landed Gentry; Four Masters, ed. O'Donovan (1856); Bagwell's Ireland under the Tudors; Webb's Irish Biography; Carew MSS.; Cal. Irish State Papers; Froude's Hist. x. 580.] S. L.

COSBY, SIR HENRY AUGUSTUS MONTAGU (1743-1822), lieutenant-general, only son of Captain Alexander Cosby, a direct descendant of Francis Cosby of Stradbally [q. v.], was born at Minorca, where his father was then stationed, in 1743. Captain Cosby was himself a distinguished officer, who after serving in the Duke of Montagu's regiment, and on the staff in Germany and Minorca, went on half-pay, and was sent to India by the directors of the East India Company in 1753 with a special mission to reorganise the company's troops. He first served as second in command to Major Stringer Lawrence in the Madras presidency, and was then transferred to Bombay, where he acted as second in command at the taking of Surat in 1759, of which important city he was appointed commandant, and where he died soon afterwards. Henry Cosby first saw service as a volunteer in the capture of Gheria, the stronghold of the Maráthá pirate Angria, by Colonel Clive and Admiral Watson in 1756, when he was only thirteen years of age. In 1760 he joined the company's Madras regiment of Europeans, which his father had disciplined, as an ensign. He was at once employed in Coote's advance on Pondicherry, and at the capture of that place he distinguished himself by saving the life of the major commanding H.M.'s 79th regiment, who offered him an ensigncy in his regiment, which he refused. He was present at the siege of Vellore, and on being promoted lieutenant was sent with a detachment of Europeans and sepoys to Masulipatam, where he remained in command until 1764. He threw up his command in order to serve at the siege of Madura in that year, and in 1767 he was promoted captain and appointed to the 6th battalion of Madras sepoys, which he commanded at the battles of the Chengama and of Errore, and at the siege of Arlier, where he was wounded in 1768. In 1771 he commanded the troops which stormed Vellore on 27 Sept., and was appointed governor of that place; in 1772 he went on the staff as brigade-major, and in 1773 he was promoted lieutenant-colonel, and appointed the first adjutant-general of the company's troops in Madras. In that capacity he served at the second siege of Tanjore in 1775, and was sent home with the despatches announcing its capture by Brigadier-general Joseph Smith, the commander-in-chief at Madras. He returned to India in 1777, and, after commanding a force against the celebrated palegar Bom Rauze, resigned his staff appointment in December 1778 to take up the lucrative appointment of commander of the nawáb of Arcot's cavalry. This force he thoroughly disciplined, and he played an important part at its head in the second war with Haidar Ali. His forced march from Trichinopoly was a great military feat, though he was just too late to join Colonel Baillie, who was defeated and forced to surrender at Pullalúr, and he managed to circumvent Haidar Ali, and cleverly joined Sir

Hector Monro, under whom he did important service. In October 1782 he was ordered to England on sick leave, but was taken prisoner at the Cape on his way; he, however, managed to save the most important despatches concerning the war with Haidar Alí with which he was entrusted, and for so doing he was knighted by George III when he reached England on parole. In 1784 he returned to India for the last time, and after commanding in Trichinopoly and Tinnevelly as brigadier-general he was appointed colonel of the 4th Madras Europeans, and finally left India in December 1786, after thirty years of continuous service. He had made a large fortune in India, and purchased the beautiful seat of Barnsville Park, near Chepstow, which he greatly improved and embellished. In 1793 he married Agnes, daughter of Samuel Eliot of Antigua, and sister of Lady Le Despenser. He continued to take the keenest interest in all Indian matters, and was president of the committee of Indian officers in London, who were chosen to draw up the new regulations intended to settle the grievances of the company's officers. His services were so great and he became so popular in this capacity that he was presented with a piece of plate by the other officers on the commission, and was by their special request made one of the first major-generals on the Indian establishment, although he had been absent from India more than five years, the period allowed by the new regulations. He was also appointed to command the depôt which the East India Company thought of establishing in the Isle of Wight in 1796 for the recruiting service of their European regiments, a scheme which eventually came to nothing. Cosby was promoted major-general in 1793, and lieutenant-general in 1816 (antedated to June 1799), and died at Bath on 17 Jan. 1822. He was buried in Bath Abbey, where a monument was erected to him.

[Dodwell and Miles's Indian Army List; Gent. Mag. February and March 1822, nearly identical with the notice in the East India Military Calendar, i. 1–24, and therefore probably written by Sir John Philippart, the compiler of the Calendar.] H. M. S.

COSBY, PHILLIPS (1727 ?–1808), admiral, was born in Nova Scotia, of which province his father, Colonel Alexander Cosby, was lieutenant-governor, and his godfather, General Phillips, the husband of his father's sister, was governor. He entered the navy in 1745, on board the Comet bomb, under the command of Captain (afterwards Sir Richard) Spry, with whom he continued in different ships—the Chester in the East Indies and at the siege of Pondicherry, the Gibraltar in North American waters with Commodore Keppel, the Fougueux in the fleet under Boscawen in 1755, the Orford at Louisbourg in 1758 and Quebec in 1759—until his promotion to the rank of commander on 2 June 1760. As lieutenant of the Orford he is said to have been specially attached as naval aide-de-camp to General Wolfe, and to have been with him at his death on the heights of Abraham. In the early months of 1761 he commanded the Laurel and Beaver sloops, and on 19 May was posted to the Hind frigate, and continued in her on the home station till October 1762, when he was transferred to the Isis, in which he continued till the peace. In 1766 he was appointed to the Montreal frigate, and commanded her in the Mediterranean under his old captain, Commodore Spry, until 1770, with the interlude of bringing to England the body of the Duke of York in October 1767. On paying off the Montreal he was appointed, in 1771, receiver-general of St. Kitts, a lucrative post which he resigned on the outbreak of the war with France in 1778. He was then appointed to command the Centaur, and was shortly afterwards moved into the Robust, in which he accompanied Vice-admiral Arbuthnot to North America in 1779, and continuing on that station had the honour of leading the line, and, owing to the admiral's ignorance and incapacity, of sustaining the whole brunt of the enemy's fire in the action off the Chesapeake on 16 March 1781. The Robust was so shattered that it was not without great difficulty and danger that she reached New York, nor could she be refitted in time to sail with Rear-admiral Graves in September. When Graves returned to the Chesapeake in October, the Robust, though scarcely seaworthy, accompanied him, and being shortly afterwards ordered to England had to bear up for Antigua, where she was hove down. She finally reached England in July 1782.

In 1786 Cosby was appointed commodore and commander-in-chief in the Mediterranean. He held this post for three years, and shortly after his return was advanced to flag rank, 21 Sept. 1790. In 1792 he was port-admiral at Plymouth, and in 1793, with his flag in the Windsor Castle, went out to the Mediterranean as third in command in the fleet under Lord Hood. His service in command of a detached squadron was uneventful, and towards the end of 1794, having hoisted his flag in the Alcide, he returned to England with a large convoy. He had no further service afloat, though till the peace in 1801 he had command of the impress service in Ireland. He became vice-admiral on 12 April

1794, admiral on 14 Feb. 1799, and at the age of eighty died suddenly at Bath on 10 Jan. 1808. 'He was at the rooms the preceding evening and played at whist.' He married in 1792 Eliza, daughter of Mr. W. Gunthorpe of Southampton, but left no children, and the estates of Stradbally (in Queen's County) passed by his will to his next of kin, Thomas Cosby, who traced back to a common ancestor, their respective great-grandfather and great-great-grandfather. Phillips Cosby himself was the second son of the ninth son of his grandfather, who had eleven sons and four daughters; and had, contrary to all probabilities, succeeded to the estate in 1774, on the failure of all the elder branches of the family.

[Burke's Landed Gentry; Charnock's Biog. Nav. vi. 435; Naval Chronicle (with a portrait), xiv. 353; Gent. Mag. (1808), vol. lxxviii. pt. i. p. 92; official letters in the Public Record Office.] S. L.

COSIN or COSYN, EDMUND (*fl.* 1558), vice-chancellor of Cambridge University, a native of Bedfordshire, entered King's Hall, Cambridge, as a bible clerk; proceeded B.A. early in 1535, M.A. in 1541, and B.D. in 1547; was successively fellow of King's Hall, St. Catharine's Hall, and of Trinity College (on its formation in 1546); and held from 21 Sept. 1538 to November 1541 the living of Grendon, Northamptonshire, which was in the gift of King's Hall. Cosin was proctor of the university in 1545, and his zeal in the catholic cause combined with Gardiner's influence to secure his election early in Mary's reign to the mastership of St. Catharine's Hall, and his presentation by the crown to the Norfolk rectories of St. Edmund, North Lynn (1553) and of Fakenham (1555), and to the Norfolk vicarages of Caistor Holy Trinity, and of Oxburgh (1554). In 1555 Trinity College presented him to the rectory of Thorpland, Norfolk. At the same time Cosin held many minor ecclesiastical offices, being chaplain to Bonner, bishop of London, and assistant to Michael Dunning, chancellor of Norwich diocese. In 1558 he was elected vice-chancellor of his university, but failing health and the ecclesiastical changes which accompanied Elizabeth's accession induced him to resign all his preferments in 1560 (cf. his letter to Parker in Strype's *Parker*, i. 176). He subsequently lived in retirement in Caius College, Cambridge, of which he was a pensioner in 1564. In 1568 the lords of the council summoned him before them to answer a charge of nonconformity, but Cosin appears to have preferred leaving the country to complying with the order. He was known to be living abroad in 1576.

[Strype's Memorials, III. i. 80; Cooper's Athenæ Cantab. i. 204, 552; Egerton Papers (Camd. Soc.), p. 65; Nichols's Prog. Eliz. iii. 173; Blomefield's Norfolk.] S. L.

COSIN, JOHN (1594–1672), bishop of Durham, was born on 30 Nov. 1594 (*Sloane MS.* 1708, f. 109) at Norwich, where his father, Giles Cosin, was a wealthy citizen. His mother, Elizabeth Cosin (née Remington), belonged to a Norfolk county family. He was educated at the Norwich grammar school, and at the age of fourteen was elected to a Norwich scholarship at Caius College, Cambridge. In due time he was elected fellow of his college, and was then appointed secretary and librarian to Bishop Overall of Lichfield. A similar offer was made to him by Bishop Lancelot Andrewes of Ely; but on the advice of his tutor he preferred Bishop Overall's offer. As the bishop died in 1619, Cosin was not long with his patron, but long enough to acquire an immense reverence for him, whom he always spoke of in later life as his 'lord and master.' Cosin next became domestic chaplain in the household of Bishop Neile of Durham, by whom he was appointed in 1624 to the mastership of Greatham Hospital, and (4 Dec. 1624) to a stall in Durham Cathedral. He speedily exchanged his mastership for the rectory of Elwick. In 1625 he became archdeacon of the East Riding of Yorkshire, and in 1626 rector of Brancepeth in Durham. In the same year he married Frances, daughter of Matthew Blakiston of Newton Hall, a canon of Durham, and a man of ancient family in that county. Cosin was soon brought into collision with the puritans. He was a personal friend of Laud, and still more intimate with Montague; and in 1626 he attended the conference at York House respecting Montague's books, 'Appello Cæsarem' and 'A Gagg for the New Gospell,' as a defender of the author. The publication of his 'Collection of Private Devotions' in 1627 brought Cosin into still more hostile relations with the puritan party, and in 1628 he was further embroiled with them, owing to a violent sermon preached in Durham Cathedral by one of the prebendaries, Peter Smart, who inveighed against 'the reparation and beautifying of the cathedral,' in which Cosin had taken a leading part. The preacher referred to Cosin as 'our young Apollo, who repaireth the Quire and sets it out gayly with strange Babylonish ornaments.' For this sermon Smart was cited before a commission of the chapter, Cosin being one of the commissioners, and was suspended 'ab ingressu ecclesiæ,' and soon after his prebendal stall was sequestered. Smart twice (1628 and 1629)

brought an indictment against the commission before the assizes, and, both times failing, brought the articles before Archbishop Harsnett at York, again without success. The principal things objected to were the position of the altar, the altar lights, the vestments used at Holy Communion, and the position of the celebrant. It is a curious illustration of that force of character which was a striking feature in Cosin that, though he was probably the youngest of the chapter (he was only thirty-two), he was evidently and rightly regarded as the prime mover in the obnoxious alterations. This prominence of Cosin is further shown by the fact that in 1633, when Charles I visited Durham Cathedral, Cosin had the whole regulation of the king's reception, and the arrangement of the services which the king attended.

In 1634–5 Cosin was elected to the mastership of Peterhouse, Cambridge, vacant by the promotion of Dr. Matthew Wren to the see of Hereford. Here again he at once made his mark. The chapel services were brought up by the new master to the Laudian level. 'A glorious new altar,' writes Prynne, 'was set up, and mounted on steps, to which the master, fellowes, schollers bowed, and were enjoyned to bow by Doctor Cosins, the master who set it up. There were basons, candlestickes, tapers standing on it, and a great crucifix hanging over it,' and much more in the same vein (*Canterbury's Doom*, pp. 73, 74). In 1639 Cosin became vice-chancellor of the university, and in 1640 was appointed by Charles I, whose chaplain he was, dean of Peterborough.

But his old enemy, Smart, had now an opportunity of paying off old scores. He presented a petition to the House of Commons complaining of Cosin's 'superstitious and popish innovations in the church of Durham,' and of his own 'severe prosecution in the high commission court.' Cosin was sentenced by the whole house to be 'sequestered from all his ecclesiastical benefices,' and thus became 'the first victim of puritanical vengeance who suffered by a vote of the commons' (Surtees, *Hist. of Durham*). In 1642 he was an active instrument in sending the college plate to supply the royal mint at York, and was, in consequence, ejected from the mastership (13 March 1643–4) by warrant from the Earl of Manchester, being again the first to be thus ejected.

He retired to Paris, and officiated, by order of the king, as chaplain to those of Queen Henrietta Maria's household who belonged to the church of England. He first officiated in a private house; but that soon proved too small to contain the congregation, and Sir Richard Brown, the English ambassador in France, and the father-in-law of John Evelyn, fitted up the chapel at the residency, and there the English services were conducted for nearly nineteen years, with all that imposing ritual which Cosin loved. The Romanists made persistent efforts both to win over Cosin with offers of great preferment, and to seduce the English in the household of Queen Henrietta, who was herself a Romanist. Perhaps they thought the way would be prepared for them by Cosin himself, who had been regarded by the puritans in England as half a Romanist. But if so, they quite mistook their man. Cosin was much further removed from Romanism than he was even from puritanism; and the attempts of the Romanists only incited him to forge some formidable weapons against themselves. He held controversies with Roman priests; he devoted his enforced leisure to literary work against Romanism, and used his great personal influence for the same purpose. So that 'whilst he remained in France he was the Atlas of the protestant religion, supporting the same with his piety and learning, confirming the wavering therein, yea, daily adding proselytes (not of the meanest rank) thereunto' (Fuller, *Worthies*). One convert the Romanists did succeed in making, viz. Cosin's only son, to the intense grief of his father, who disinherited him in consequence. It has been thought that Cosin's annoyance caused him to fraternise with the Huguenots more closely than might have been expected from one of his views. He attended the services of the reformed church at Charenton, and was on terms of great intimacy with several ministers of that communion, who allowed him to officiate in their chapels, using the office of the church of England. But it is quite unlike Cosin to be influenced by personal pique in such a matter; and there is not the slightest trace of any such feeling in his own writings. On the contrary, he gives a perfectly clear and logical account of the course which he adopted. He drew a marked distinction between those who had not received ordination from bishops because they could not help themselves, and those who deliberately rejected it when it was within their reach. This was also the view taken by Bishop Overall, and Cosin was always deeply influenced by the judgment of his 'lord and master.'

Cosin 'had lodgings assigned him in the Louvre, together with a small pension from France, on account of his connection with the Queen of England' (Surtees). He also received some pecuniary assistance from friends in England, notably from Dr. (after-

wards Archbishop) Sancroft, to whom he gave practical proof of his gratitude as soon as it lay in his power. But there is no doubt that he was reduced to great straits at Paris, a stronger proof of which could not be found than in the fact that he was on the point of selling his books to meet his exigencies. Cosin was an enthusiastic book collector, and his library was 'one of the choicest collections of any private person in England' (Evelyn). Happily he was spared this sacrifice by the occurrence of the Restoration. Upon this event he returned to England and resumed his preferments. It is thoroughly characteristic of the man that, as he had been the first to suffer for his principles in the rebellion, he was the first to avow them openly at the Restoration. While other men were, as Pepys terms it, 'nibbling at the Common Prayer,' waiting timidly to see which way the wind would blow, Cosin, as dean of Peterborough, 'in the year 1660, about the end of July, revived the ancient usage [in Peterborough Cathedral], and read divine service first himself, and caused it to be read every day afterwards, according to the old laudable use and custom, and settled the church and quire in that order wherein it now (1685) continues' (Kennet, *Register*, p. 229). Cosin, however, did not remain long at Peterborough. On 2 Dec. 1660 he was consecrated bishop of Durham at Westminster Abbey, his friend and kind helper in adversity, and now his domestic chaplain, Sancroft, preaching the consecration sermon. He now began that course which deservedly won for him the reputation of being one of the greatest prelates of his own, or indeed of any age. This reputation he won not so much as a preacher or a writer, though he was great as both. But his preaching cannot be compared with that of Jeremy Taylor or Barrow or South; nor can his writings be compared with those of Pearson or Stillingfleet or Brian Walton. His strength lay in his administrative powers. He always had the clearest and most definite conception of the position of the English church, and was deterred by no obstacles from making good that position. His personal influence was immense, and that influence was no doubt enhanced by his splendid munificence. Hence the diocese of Durham, from being exceptionally backward, soon became exceptionally forward under his rule, and mainly owing to his energy. He gathered around him men of a kindred spirit, who worked loyally under him, and upon whom, like most strong men, he left a permanent impression, which survived long after his death.

The bishop of Durham was prince of the palatinate as well as bishop of the diocese, and Cosin was as well fitted to sustain the former as the latter character. His reception into the see was enthusiastic. 'The confluence,' he writes to Sancroft, 'and alacritie, both of the gentry, clergie, and other people, was very greate; and at my first entrance through the river of Tease there was scarce any water to be seene for the multitude of horse and men that filled it when the sword that killed the dragon was delivered to me with all the formality of trumpets and gunshots and acclamations that might be made.' (This was the tenure on which the bishops held the manor of Sockburn.) 'I am not much affected with such showes; but, however, the cheerfullness of the country in the reception of their bishop is a good earnest given for better matters which, by the grace and blessing of God, may in good time follow here among us all.' 'The country' had no reason to be disappointed. No doubt Cosin spoke truly when he said he was 'not much affected by such showes,' for he was personally a plain, homely man. Nevertheless he was, both in mind and appearance, admirably adapted to play the part that was required of him. With a tall, handsome, and erect person, he possessed a commanding character, such as befitted the temporal as well as the spiritual ruler of the county palatine. He at once held 'a solemne confirmation,' at which a vast number of catechumens were presented, as was natural, seeing that the arrears of twenty years had to be made up. He then held a synod of the clergy, determining, he says, 'to put them in order, if by any fayre means I can.'

But meanwhile, besides the affairs of his diocese, the affairs of the church at large had to be settled; and in the settlement of them Cosin took a leading part. In 1661 the Savoy conference, 'to advise upon and review the Book of Common Prayer,' was held. Cosin was a constant attendant, and the part which he took, both at this conference and at the convocation which immediately followed it, is exceedingly characteristic. At the conference he showed himself, as Baxter, after some depreciation of him, owns, 'excellently well versed in canons, councils, and fathers;' and, 'as he was of rustick wit and carriage, so he would endure more freedom of our discourse with him, and was more affable and familiar than the rest.' He earnestly endeavoured to effect a reconciliation with the presbyterians, but in vain.

At the convocation in November 1661 Cosin's proposals were all in favour of making the services more in accordance with the ancient liturgies. There was no inconsistency in this. As a staunch churchman he yearned

for unity, and was quite ready to stretch a point in order to secure it. But equally as a staunch churchman his personal predilections were in favour of ancient ritual and order. All his proposals as a very influential member of the revision committee were in this direction. The committee was instructed 'to compare the prayer-book with the most antient liturgies which have been used in the church in the primitive and purest times;' and no one was better fitted for this task than Cosin, for he was a profound liturgical scholar, and his suggestions were based on a thorough study of ancient liturgies, whose spirit as well as letter he had deeply imbibed. He possessed the now almost lost art of composing prayers after the best and most ancient models; and to him we are indebted for some of the most beautiful collects in our prayer-book, and probably for most of the alterations made. He suggested, at the revision of 1661, many further alterations, a few of which may be noticed. They are all in the direction of a greater strictness of order, or definiteness of doctrine, or supply obvious omissions. The rubric enjoining all priests and deacons to say daily the morning and evening prayer is worded more strictly. Proper psalms are suggested for the Epiphany, rogation days, St. Michael and All Angels' day, and All Saints' day. In the rubric concerning chancels the words 'shall be divided from the body of the church' are inserted. Instead of 'Endue thy ministers,' Cosin suggests 'Let Thy priests be clothed' with righteousness. In the rubric respecting the Litany it is added, 'The priests (or clerks) kneeling in the midst of the quire, and all the people kneeling and answering as followeth.' In the rubric before the Communion Service, instead of 'the table at the communion time shall stand in the body of the church,' &c., Cosin suggests 'the table always standing at the upper end of the chancell (or of the church, where a chancell is wanting), and being at all times covered with a carpet of silk, shall also have a faire white linnen cloth upon it, with paten, chalice, and other decent furniture, meet for the high mysteries there to be celebrated.' To the rubric 'The priest standing at the north side,' &c., is added 'or end.' The rubric respecting the Gospel runs: 'And the Epistle ended, the priest (or the gospeller appointed) or a deacon that ministereth shall read the Gospel, saying first, "The Holy Gospel," &c.; and the people all standing up shall say "Glory be to Thee, O Lord," and at the end of the Gospel he that readeth it shall say, "Here endeth the Holy Gospel," and the people shall answer, "Thanks be to Thee, O Lord."' In the prayer for the church militant the clause referring to the faithful departed is considerably amplified; and after the prayer of consecration there is a very beautiful 'memoriall, or prayer of oblation.' The Order of Confirmation is enlarged; and in the 'Thanksgiving of Women' &c. the rubric directs that 'the woman shall, upon some Sunday or other holy-day, come decently vayled into the parish church, and at the beginning of the Communion Service shall kneele down in some convenient place appointed unto her by the minister before the holy table.' The fact that some of Cosin's suggestions have been adopted without specific direction shows how seemly they were.

A prayer-book of 1619, with the emendations and alterations in Cosin's own handwriting, together with some further suggestions of Cosin in Sancroft's handwriting, which Canon Ornsby thinks may 'certainly be regarded as that which was laid by him before the convocation,' is still preserved in the library at Durham. Convocation committed to Cosin's care the preparation of a form of consecration of parish churches and chapels. The bishop drew up a form based on that of Bishop Andrewes, and used it in his own diocese; but it was not generally adopted by authority. One rubric in this consecration service is very significant, in regard of Cosin's views on the much-vexed question of the eastward position: 'Then shall the bishop ascend towards the table of the Lord, and then kneele downe at his falstoole before it,' &c.

The convocation ended, Cosin returned to Durham, and pursued that career of unwearied diligence and extraordinary munificence which left an impress upon the diocese greater, perhaps, than was made by any bishop in the kingdom. In 1662 he held a visitation both in Northumberland and Durham; and in November of the same year 'made a fair progress through the larger part of this county palatine, preaching on every Sunday in several churches, and being received with great joy and alacrity, both of the gentry and all the people' (Kennet). In the same year he held his primary visitation of the cathedral, making the fullest and most minute inquiries. The intervals of the year were filled up with visits to country churches in his own neighbourhood, preaching, catechising, and inducing parents to bring their children to baptism, which sacrament had been much neglected during 'the troubles.' He had always one definite object in view, viz. to have the church system fully worked, with the utmost order and the greatest beauty of ritual, and he succeeded to a marvellous

extent. Personally, he was disposed to be friendly to men of all opinions; but he was a strict disciplinarian, and he felt it his duty to use rigorously the powers which the law gave him to bring all men into outward conformity with the church he served, and then to turn mere conformists into real churchmen, or at least the semblance of such. His position gave him a double power; for he was not only bishop of the diocese, but also, quâ bishop, lord-lieutenant of the county, and he had not the slightest scruple, as such, in employing the train-bands to hunt out nonconformists. There was a strong puritan element in his diocese, perhaps owing to its near neighbourhood to Scotland. There were also many old and influential Roman catholics; and these of course drew after them many dependents. 'Popish recusant' and nonconforming presbyterian were equally obnoxious to Cosin. Many of his acts in relation especially to the latter were utterly unjustifiable, according to our modern notions; but it is obviously unfair to judge a prelate of the Restoration era by the standard of the nineteenth century. And again, it is only fair to take into account the very real, though no doubt exaggerated, fear of danger both to the altar and the throne which prevailed. But after making full allowance for all this, such sentences as the following naturally shock us: 'I am sorry to heare that Mr. Davison, vicar of Norton, hath so many obstinate men and women in his parish that will not yet let downe their conventicles. Here at London they are ferretted out of every hole by the train-bands of the city and the troops employed for that purpose by the king and his officers,' and so forth. In other respects Cosin was not a perfect character. His violent opposition to the election of parliamentary representatives for the county—a point which he succeeded in carrying—seems rather an arbitrary proceeding; nor can we at all approve of his sanctioning the sale of offices in his patronage. Indeed, he had always rather too keen an eye for business, exacting all that he considered his due to the utmost farthing. But if he loved to acquire money, he also loved to spend it on purely unselfish objects. The amount he spent upon the castles at Durham and Auckland, upon the cathedral at Durham, upon the chapel at Auckland (which he brought up externally to the standard of ornate ritual which he loved), upon the library at Durham which still bears his name, upon the foundation of scholarships, both at Caius and Peterhouse, upon general and rather indiscriminate almsgiving, upon help to the sufferers from the plague in London, at Durham, and at Cambridge, upon lavish hospitality, upon the redemption of christian captives at Algiers, upon the building and endowment of hospitals at Durham and Auckland, upon the augmentation of poor livings, and upon innumerable other objects of benevolence, must have been enormous. We can well understand his being called *par excellence* '*the* munificent bishop of Durham;' and we could imagine that Archdeacon Basire's statement in his funeral sermon, that he spent 2,000*l.* every year of his episcopate on works of charity, was below rather than above the mark. When his friends remonstrated with him for spending such vast sums of money upon church building and ornamentation, to the detriment of his children, he replied, 'The church is my firstborn.' But his business habits enabled him also to make ample provision for his younger children.

Cosin died in London on 15 Jan. 1671–2, after a long and painful illness, which was probably aggravated by his persistence in attending church, 'though the weather was never so ill.' When his friends and physicians remonstrated with him, he replied that 'when his body was unfitt to serve and honour God, 'twas fitt to go to the dust from whence it came.' He was buried, according to his own desire expressed in his will, at Bishop Auckland, with a magnificent funeral, as befitted one who may fairly be called a magnificent prelate. The funeral sermon was preached by the archdeacon of Northumberland, Isaac Basire [q. v.], who had loyally seconded all his chief's efforts during his lifetime, and continued to carry them out after his death. The sermon is entitled 'The Dead Man's Real Speech,' and appended to it is a 'Brief' of the great prelate's life.

Though Cosin was a staunch and unflinching churchman of a very marked type, and may, broadly speaking, be grouped with the Laudian school, he differed, both in general tone and in special opinions, from many churchmen of his day. For instance, at the Savoy conference he was, as we have seen, more favourable to the nonconformists than any of the bishops except Reynolds and Gauden, one of whom virtually was, and the other had been, a presbyterian. His attitude towards the foreign protestant churches was certainly different from that of many churchmen in his day. He acted in this matter at Paris in a way which his friend, Bishop Morley, for instance, who on the whole was by no means so advanced a churchman, could neither approve nor imitate. He held the same views to the end of his life, and drew an elaborate parallel between Rome and Geneva, showing that on every point the

English church was more in accord with the latter than the former. He also took quite a different line from most churchmen on the Sabbath question. He laid great stress on the Fourth Commandment, which he termed 'the very pith of all the Decalogue, by due observance whereof we come both to learn and put in practice all the rest of God's commandments the better, and without which, in a short time, they would all come to nothing.' Three out of his twenty-two extant sermons are on this commandment, and he wrote a letter, which almost amounts to a treatise, on the subject. Of course, he fully distinguished between the Jewish Sabbath and the christian Lord's day. He classes the latter among other holy days, and he would have had all of them observed as strictly, though not as austerely, as the puritans would have had their Sabbath. His teaching on this point is strangely different from that which led to and defended the 'Book of Sports.' His attitude towards Romanism was always one of uncompromising hostility; and by far the greatest proportion of his literary work is expressly directed against that system. He was also strongly in favour of divorce in the case of adultery, and of permission to the innocent party in such cases to remarry. In the famous case of Lord Ross eighteen bishops voted against the divorce, and only two in favour of it, and Cosin was one of the two. Again, though he was always emphatically the priest, though he maintained to the end the traditions of his early intimacy with men like Laud, Mountague, Erle, Morley, and especially Overall, yet he was also, in the good sense of the term, a man of the world. He was full of *bonhomie*, interested in the minutest points of secular business, on terms of great intimacy with the laity, and a great smoker. He was singularly frank and outspoken, and showed a quaint originality of character and expression, which must have been very attractive.

Cosin's writings acquire an adventitious importance from the writer's own forcible and interesting character. It is not the writings that have preserved the man, but the man who has preserved the writings from oblivion. Still, the writings themselves possess a great intrinsic value. With two exceptions, none of them were published during the bishop's lifetime. Probably the first written, though not the first published, of Cosin's works is that entitled 'The Sum and Substance of the Conferences lately held at York House concerning Mr. Mountague's Books, which it pleased the Duke of Buckingham to appoint, and with divers other honourable persons to hear, at the special and earnest request of the Earl of Warwick and the Lord Say.' These conferences were held in February 1625-6. The books were 'The Gagg' and the 'Appello Cæsarem;' and it appears from Mountague's letters to Cosin that the latter had seen and approved, if he had not actually had a considerable share in the production of, the offending volumes. 'The Sum and Substance' is simply a narrative of all that took place at the conferences. In February 1626-7 Cosin published his famous 'Collection of Private Devotions, in the practice of the Ancient Church, called the Hours of Prayer; as they were after this manner published by authority of Queen Elizabeth, 1560.' John Evelyn gives the following account of its publication: 'Oct. 12, 1651.—I asked Mr. Deane (Cosin) the occasion of its being publish'd, which was this: the Queene coming over into England with a great traine of French ladys, they were often upbraiding our English ladys of the court that, having so much leisure, trifled away their time in the antechambers among the young gallants, without having something to divert themselves of more devotion; whereas the Ro. Catholick ladys had their Hours and the Breviarys, which entertained them in religious exercise. Our Protestant ladys scandalized at this reproach, it was complained of to the king.' The king consulted Bishop White, and 'the bishop presently named Dr. Cosin (whom the king exceedingly approv'd of) to prepare [a book], as speedily as he cou'd, and as like to their pockett offices as he cou'd, with regard to the antient forms before Popery.' Cosin prepared his book in three months; and the Bishop of London (Mountain) 'so well lik'd and approv'd, that (contrary to the usual custome of referring it to his chaplain) he wou'd needs give the *imprimatur* under his own hand.' The book sold very rapidly; and if it had been published at any other time no outcry would have been raised against it. But it appeared when Laud and Mountague had lately roused the antipathy of the puritans, and Cosin was a known friend of both. It was therefore found to contain popery in disguise. Henry Burton wrote against it his 'Examination of Private Devotions; or the Hours of Prayer, &c.,' W. Prynne his 'Brief Survey and Censure of Mr. Cozen's Cozening [or 'cousining' or 'cozenizing'] Devotions.' In fact Cosin, as he told Laud, was 'the subject of every man's censure.' Most of the objections were of the most ridiculous nature. 'In the frontispiece the name of I.H.S. is engraven, which is the Jesuit's marke.' 'The title, "The Houres," is both a popish and a Jewish name.' 'Matins and Evensong are popish words.'

'*Nunc Dimittis* and *De Profundis* are two papistical songs.' 'Lent is made a religious fast,' and so forth. Two points only required an answer: (1) seven sacraments are mentioned, but Cosin clearly showed that he distinguished markedly between the two sacraments of the Gospel and the five commonly but not so truly called sacraments; (2) prayers for the departed, but Cosin pointed out 'the tytle at the top of the page was, "Praiers *at* the point of death," not *after* it, and that the printer omitted to place in the margin, as he was directed to do, 'repeating the sentences untill the soule were departed.' Cosin, however, contends that 'the substance of these two prayers be nothynge els but what we all used to say, even after we heare a man is dead, *God's peace be with him*, and *God send him a joyfull resurrection*, which kind of praiers for the dead the Archbishopp of Armagh doth highly approve and acknowledge to be the old and perpetuall practice of the church of Christ.' Of course, after the Restoration the tide turned, and 'Cosin's Devotions' became one of the favourite devotional works with churchmen of the period.

Cosin was a most uncompromising enemy to popery. In France he wrote his 'Historia Transubstantialis Papalis' at the request of Gilbert Talbot, who had undertaken to argue the matter out with 'a German prince' (the Duke of Newbourg), in the presence of Charles II at Cologne, and apparently did not feel quite equal to the task. Cosin readily consented, and showed in his treatise that the church of England held the doctrine of a real presence without in any way countenancing the doctrine of transubstantiation. It was not published until nineteen years after it was written (in 1675), and three years after the death of the author; but the title says it was 'allowed by him to be published a little before his death, at the earnest request of his friends.' It was then given to the world, with an interesting preface by Dr. Durel, in the original Latin. In the following year (1676) an English translation was published by Luke de Beaulieu. Cosin also wrote, in 1652, 'Regiæ Angliæ Religio Catholica,' at the request of Edward Hyde, afterwards earl of Clarendon, in order to give foreigners a right notion of the doctrine and discipline of the church of England as constituted by authority. This, too, was written in Latin, and was first published in Dr. Thomas Smith's 'Vitæ,' as a sort of appendix to the 'Vita Joannis Cosini,' in 1707. The most elaborate and important work which Cosin wrote during his exile, and the only one of them which he himself gave to the world, was 'A Scholastical History of the Canon of Holy Scripture; or the certain indubitable Books thereof as they are received in the Church of England.' Cosin tells us that Dr. Peter Gunning (afterwards bishop of Ely) 'first requested him to make it a part of his employment,' and the same Peter Gunning saw the work through the press when it was published in London in 1657. Cosin took so much pains over this learned work that he injured his eyesight. It was dedicated to Bishop Matthew Wren, then a prisoner in the Tower. It gives a history of all the books that were held canonical before the Council of Trent formed a new canon, and shows that the universal testimony of the church was for the books we have without the Apocrypha. Cosin also wrote many minor pieces, almost all of them bearing upon the same subject, viz. the position of the Anglican as opposed to the Romish church; but these scarcely require a separate notice. There is, however, one work of importance, which was not published until 1710, when Dr. Nicholls inserted it at the end of his 'Comment on the Book of Common Prayer.' It is entitled 'Notes on the Book of Common Prayer,' and contains (1) the first series of notes in the interleaved Book of Common Prayer, A.D. 1619; (2) the second series of notes in the interleaved Book of Common Prayer, A.D. 1638; (3) the third series in the manuscript book, and three appendices. The importance of this work to all who are interested in our Book of Common Prayer cannot be exaggerated.

Only twenty-two of Cosin's sermons are now extant, and these all belong to the period before he was bishop. They are in the style of the earlier part of the seventeenth century, before the quaint roughness of Andrewes was exchanged for the rather vapid smoothness of Tillotson. But in one respect they differ from the fashion of the day, in that they are but sparingly embellished with quotations from the learned languages, and then only from the Latin. Cosin's 'Correspondence,' in two volumes (1868 and 1870), edited by the Surtees Society, with an admirable introduction to each volume by Canon Ornsby, the editor, gives an interesting picture of the life and character of the man, and also of his friends and times. A full collection of Cosin's works was not published until the excellent edition, in five octavo volumes, of the 'Library of Anglo-Catholic Theology' was issued (1843–55). Dr. T. Smith, in 1692, began to prepare an edition, but did not carry it out. He inserts a short 'Vita Joannis Cosini' in his 'Vitæ quorundam eruditissimorum, &c. Virorum,' &c. (1707); but though he had the

advantage of knowing and receiving information from several friends and contemporaries of the bishop, it is but a meagre performance, and hardly worth the trouble of wading through in Latin, now that Canon Ornsby has given us the substance, and much more than the substance, in a graphic and interesting form in the vernacular.

(Surtees Society); Vitæ quorundam eruditissimorum et illustrium virorum, scriptore Thomâ Smitho; The Dead Man's Real Speech, with a Brief of the Life of the late Bishop of Durham, by I. Basire; Surtees's History of Durham; Prynne's Canterbury's Doom; Neal's History of the Puritans; Walker's Sufferings of the Clergy.] J. H. O.

COSIN, RICHARD (1549?–1597), civil lawyer, born at Hartlepool about 1549, was the son of John Cosin of Newhall, lieutenant to Thomas Dudley at the battle of Musselburgh (1547), who was either killed by the Scots soon after that battle, or was drowned on his way home. Richard's mother remarried one Medhope, by whom Richard was brought up. He was educated at Skipton school, and evinced so much precocity that he became a pensioner of Trinity College, Cambridge, 12 Nov. 1561, before he was twelve years old, and was soon afterwards elected a scholar, and subsequently fellow. Whitgift was his tutor, and was much impressed with his abilities. He proceeded B.A. in 1565–6, M.A. in 1569, and LL.D. in 1580. He subscribed against the new university statutes in May 1572; became chancellor of Worcester diocese and visitor of Lichfield Cathedral (20 Jan. 1582–3), and was appointed dean of arches and vicar-general of the province of Canterbury by Archbishop Whitgift 10 Dec. 1583. Cosin was an ecclesiastical commissioner of the diocese of Winchester in 1583–4, a visitor for the diocese of Gloucester in 1584, a member of the Society of Advocates 14 Oct. 1585, M.P. for Hindon, Wiltshire, 29 Oct. 1586 and again for Downton 4 Feb. 1588–9, and master in chancery 9 Oct. 1588. He was also a member of the ecclesiastical commission court. He died at his lodgings in Doctors' Commons 30 Nov. 1597, and his body was removed for burial at Lambeth on 9 Dec. Lancelot Andrewes preached the funeral sermon, and William Barlow, afterwards bishop of Lincoln [q. v.], for whose education Cosin had paid, wrote a biography in Latin, published in 1598. Barlow describes Cosin as learned and witty, and of powerful physique. With Barlow's biography was issued a collection of 'Carmina Funebria' in Greek, Latin, English, and Italian from the pens of Cosin's Cambridge friends. Cosin left 40*l.* to Trinity College Library, and 10*l.* to two poor scholars.

Cosin was the author of the following works on ecclesiastical law, all of which were treated as high authorities: 1. An Apologie of and for sundrie proceedings by Jurisdiction Ecclesiasticall,' London, 1591, 1593, a defence of the ex-officio oath, in reply to 'A Brief Treatise of Oaths,' by James Morice, attorney of the court of wards. Morice's reply to Cosin was not published, and is in MS. Cott. Cleop. F. i. 2. 'An Answer to the two first and principall treatises of a certeine factious libell put foorth latelie . . . under the title of An Abstract of certeine Acts of Parliament,' 1584. The 'Abstract' was a collection of canons and statutes claimed to support the presbyterian system of church government. 3. 'Conspiracie for Pretended Reformation, viz. Presbyteriall discipline,' with a life of Hacket, executed as a presbyterian in 1591, and accounts of the opinions of Edmund Coppinger [q.v.] and H. Arthington. 4. 'Ecclesiæ Anglicanæ Politeia in Tabulas digesta,' 1604, 1634.

COSPATRIC, EARL OF NORTHUMBERLAND (*fl.* 1067). [See GOSPATRIC.]

COSTA, EMANUEL MENDES DA (1717–1791), naturalist, was the sixth but second surviving son of Abraham, otherwise John, Mendes da Costa (*d.* 24 June 1726), a Jewish merchant who lived in the parish of St. Christopher-le-Stocks, London (*Hist. Reg.* 1726, p. 26). He was born on 5 June 1717, and, being intended for the lower branch of the legal profession, served his articles in the office of a notary (*Gent. Mag.* vol. lxxxii. pt. i. pp. 22–4). From his early years he had applied himself with enthusiasm to the study of natural history; the branches he most excelled in were conchology and mineralogy. In November 1747 he was elected a fellow of the Royal Society, and from that period until his withdrawal in 1763 he enriched the 'Philosophical Transactions' with many papers upon his favourite studies. He was admitted fellow of the Society of Antiquaries on 16 Jan. 1751–2, and was also a member of several other scientific associations, English and foreign. Although he early obtained the reputation of being one of the best fossilists of his time, and was in correspondence with many of the most celebrated naturalists of Europe, his life appears to have been a continual struggle with adversity. In 1754

we find him imprisoned for debt, and his cabinets held in bond (*A Selection of the Correspondence of Linnæus*, &c., edited by Sir J. E. Smith, ii. 482–3). Upon his release in the following year he set about preparing for the press his long-promised 'Natural History of Fossils,' the proposals for which had been issued in 1751. Of this work vol. i., part i., appeared in 1757, but no more was published, the author not finding or deserving encouragement. Through the benevolent efforts of Dr. Stukeley, Peter Collinson, and other scientific friends, Da Costa was elected to the clerkship of the Royal Society on 3 Feb. 1763, in place of Francis Hauksbee, deceased. He had held the appointment barely five years, when, being detected in various acts of dishonesty, he was summarily dismissed in December 1767, and shortly afterwards arrested at the suit of the society and committed to the king's bench prison. His library and collections were seized and sold by auction in the following May. He continued a prisoner until the end of 1772, supporting himself by his pen and lecturing, but was frequently in want. We next hear of him in 1774, when he petitioned to be allowed to read a course of lectures on fossilology to the university of Oxford in the ensuing Act term; but his reputation had preceded him, and permission was peremptorily refused. Towards the close of his life he resumed authorship with some success. He published 'Elements of Conchology; or an introduction to the Knowledge of Shells,' 8vo, London, 1776, and 'Historia naturalis Testaceorum Britanniæ, or the British Conchology, containing the . . . Natural History of the Shells of Great Britain and Ireland . . . in English and French,' 4to, London, 1778. He also revised and contributed additional notes to Engeström's translation of Cronstedt's 'Essay towards a System of Mineralogy,' 8vo, London, 1770 (second edition, enlarged by J. H. de Magellan, 2 vols. 8vo, London, 1788). In these undertakings he was greatly assisted by his steady friends Dr. John Fothergill and Dr. Richard Pulteney. Da Costa died at his lodgings in the Strand in May 1791, and was buried in the Portuguese Jews' cemetery at Mile End (*Will. reg. in P.C.C.*, June 1791; Lysons, *Environs*, iii. 478). He was twice married: first, in March 1750, to his cousin Leah, third daughter of Samuel del Prado, who died in 1763, leaving no issue; secondly, about 1766, to Elizabeth Skillman, or Stillman, by whom he had an only daughter. Many of his manuscripts are preserved in the British Museum; the more important are: his letters to and from scientific friends, which cover a period of fifty years (1737–1787), in Addit. MSS. 28534–44 (a few are printed in Nichols, *Literary Illustrations*, vol. iv.); 'Commonplace Book,' in Addit. MS. 29867 (portions of which appeared in *Gent. Mag.* vol. lxxxii. pt. i. pp. 205–7, 513–17); 'Collections relating to the Jews,' in Addit. MS. 29868 (portions in *Gent. Mag.* vol. lxxxii. pt. ii. pp. 329–31); 'Minutes of the Royal Society and Society of Antiquaries, 1757–1762,' in Egerton MS. 2381. Da Costa also mentions his 'Athenæ Regiæ Societatis Londinensis,' in three folio volumes, which he presented to the society's library in 1766; but of this all traces have disappeared.

[Nichols's Lit. Anecd. ii. 292, iii. 233, 757, v. 712, vi. 80, 81, viii. 200, ix. 607, 799, 812, 813, 816; Gent. Mag. lxxxiii. (pt. i.) 429, new ser. xxvi. 493; Quarterly Rev. cxxxix. 391; Munk's Coll. of Phys. (1878), ii. 156.] G. G.

COSTA, Sir MICHAEL (1810–1884), conductor and musical composer, son of Cavaliere Pasquale Costa, was born in Naples on 4 Feb. 1810. He learnt the rudiments of music from his maternal grandfather, Giacomo Tritto, and was subsequently placed at the Royal Academy of his native town. Three compositions by him were composed for the theatre of the college, a cantata, 'L' Immagine' (1825), and two operas, 'Il Delitto punito' (1826) and 'Il Sospetto funesto' (1827). An oratorio, 'La Passione,' a mass, a 'Dixit Dominus,' and three symphonies were composed at this time, no doubt under the supervision of Zingarelli, then director of the college. In 1828 he wrote an opera, 'Il Carcere d' Ildegonda,' for the Teatro Nuovo, and was appointed accompanist at San Carlo. In 1829 he wrote 'Malvina' for San Carlo, and 'Seldlachek,' in which Tosi, Rubini, and Bendetti appeared. In the autumn of this year he was sent to England by Zingarelli, who had composed a sacred cantata, based on Isaiah xii., for the Birmingham festival, and wished that his pupil should conduct it. The directors of the festival, distrusting his ability on account of his youth, refused not only to allow him to conduct the work, but to pay him any fee whatever unless he would undertake to sing at the festival. This he accordingly did, but, as may be imagined, with very moderate success. He was first heard on 6 Oct. in the duet 'O mattutini albori' from Rossini's 'Donna del Lago,' which he sang with Miss F. Ayton 'in character.' On the subsequent days of the festival he sang two solos, besides taking part in a few ensemble numbers. The criticisms on his performance were uniformly unfavourable, nor did his master's work obtain a much greater success. Zingarelli, according to the 'Harmonicon,'

would have acted with more discretion had he kept both his *sacred song* and his profane singer for the benefit of his Neapolitan friends. As a singer he is far below mediocrity, and he does not compensate for his vocal deficiencies by his personal address, which is abundantly awkward.' In 'Musical Reminiscences of the Last Half-century,' a work written by an intimate friend of Costa's, it is stated that Clementi found him 'scoring' a song from Bellini's 'Pirata,' and declared him to be a composer rather than a singer. For 'scoring' we should probably read 'arranging from the score,' since it is certain that he accompanied himself in the song 'Nel furor delle tempeste,' and that the audience testified their displeasure in no doubtful manner. That the proper direction of his talents was soon recognised, whether by Clementi or some other person, is evident from his being appointed *maestro al cembalo* at the King's Theatre under Laporte's management. In 1831 his ballet, 'Kenilworth,' was produced with considerable success, and in the following year he succeeded Bochsa as director of the music under Monck Mason's management. It was at this time that his real power began to show itself. Many of his most effectual reforms of abuses which had crept in among the orchestral players at the opera were now set on foot, no doubt much to the disgust of the old members of the band, who on the morning after his first appearance as conductor had presented him with a case containing seven miniature razors in mockery of his extremely youthful appearance. A ballet, 'Une heure à Naples,' is the principal work of this year; in 1833 he wrote a similar work, 'Sir Huon,' for Taglioni, and the vocal quartet, 'Ecco quel fiero istante.' In the beginning of 1838 an opera by him, 'Malek Adhel,' was produced at the Italian opera in Paris, with Grisi, Albertazzi, Rubini, Tamburini, and Lablache in the cast. When produced in London it succeeded better than it had done in Paris. A ballet, 'Alma,' was composed in 1842, and in 1844 another opera, 'Don Carlos,' saw the light, but failed to obtain the success which, in the opinion of Mr. Chorley, it deserved. In 1846, on the occasion of the secession from Mr. Lumley's company, Costa, with some of the principal singers and many of the members of the orchestra, joined the new enterprise at Covent Garden, and in the same year he was appointed conductor of the Philharmonic concerts. In this new capacity he astonished every one by his unexpected ability in the rendering of classical compositions, and he continued to conduct the concerts to universal satisfaction until 1854, when for one year the direction of the concerts was in the hands of Richard Wagner. On 22 Sept. 1848 he was elected conductor of the Sacred Harmonic Society, and in the following year he directed the festival at Birmingham, the scene of his unfortunate début, with very different results from those which followed his early attempts as a vocalist. The successive triennial festivals were conducted by him until 1879, as were also the Bradford festival of 1853 and the Leeds festivals from 1874 to 1880. To his energy must doubtless be ascribed the extraordinary success of the first Handel festival in 1857, and its successors from 1859 till 1877 inclusive. The list of his official posts is completed by that of director of Her Majesty's Opera, which he held from 1871 onwards. He received the honour of knighthood in 1869, and was also decorated with many foreign orders. Shortly before the Handel festival of 1883 he was struck with paralysis, and died at Brighton 29 April 1884.

The most prominent among his compositions are the two oratorios 'Eli' and 'Naaman,' both produced at Birmingham, on 29 Aug. 1855 and 7 Sept. 1864 respectively. Though it is impossible to deny that these two works owe their form, if not their very existence, to the success of Mendelssohn's 'Elijah,' there is yet no doubt that they contain many extremely effective passages, many attractive melodies, and, in the latter case more especially, some instances of fine choral writing. Perhaps the best proof of their vitality is the fact that they are still retained in the programmes of the Sacred Harmonic Society. In point of popularity 'Eli' was far more successful than Costa's second oratorio; the simplicity of Samuel's evening prayer, 'This night I lift my soul to Thee,' was justly admired for many years, and the well-known march has almost become part of our national music. In 'Naaman' the composer seems to have aimed at a higher and more earnest style of writing; several somewhat noisy marches occur, it is true, no doubt in consequence of the success of that which we have just mentioned, but the structure is a good deal more ambitious in many ways. It has never taken the public taste as 'Eli' took it, nor does it possess enough sterling merit to secure the lasting admiration of musicians.

Living at a time before faithfulness to a composer's intentions was considered the first qualification for a conductor, it is not to be wondered at that Costa should have made additions to Handel's scores with a view to rendering the compositions of that master thoroughly effective from his point of view. He had not the perception to see that the simple grandeur of the choruses in the 'Israel

in Egypt' requires no help from the brass instruments of modern times, and he therefore inserted trombone parts and occasional drum passages almost wherever he pleased. Though we may deplore his want of refinement, we must remember that Costa perfectly suited the taste of his generation, and that but for him the national love of Handel would have been far less than it now is.

It is as a conductor that his name will longest endure, for he was the first master of the art who had appeared in England. Not so very long before his arrival the direction of the orchestra had been effected from a pianoforte or by the leader of the violins; the change to the present system of beating time from the front of the orchestra was introduced by Spohr in 1820, but it was some time before conducting became a separate art as it is at the present day. His chief characteristics as a conductor were his indomitable will, his absolute firmness and decision of beat, and his indefatigable energy; he possessed also no small amount of diplomacy, which was of the greatest use in managing recalcitrant *prime donne* and other mutinous persons. Though many of the subtleties of the highest kind of music were beyond his reach, he never failed to realise the general effect of the compositions he directed, and Meyerbeer, whose contribution to the music of the 1862 exhibition he conducted, was no doubt in earnest when he called him 'the greatest *chef d'orchestre* in the world.'

[Grove's Dict. of Music; Quarterly Musical Magazine, x. 462, &c.; Harmonicon, vii. 273, &c.; Times, 30 April 1884; Musical Recollections of the Last Half-century; information from Dr. A. Nicholson.] J. A. F. M.

COSTARD, GEORGE (1710–1782), astronomical writer, was born at Shrewsbury in 1710, entered, about 1726, Wadham College, Oxford, of which body he became fellow and tutor, having taken degrees of B.A. and M.A. in 1731 and 1733. He was chosen proctor of the university in 1742, and on the death of Dr. Wyndham, in 1777, declined the wardenship of his college, on the ground of advanced age. His first ecclesiastical employment was the curacy of Islip, near Oxford, whence he was promoted to be vicar of Whitchurch, Dorsetshire. Finally, Lord Chancellor Northington, struck by the unusual attainments displayed in his writings, procured for him, in June 1764, the presentation to the vicarage of Twickenham, in which he continued until his death.

His two earliest works appeared anonymously—'Critical Observations on some Psalms' in 1733; 'A Critical Dissertation concerning the words Δαίμων and Δαιμόνιον, occasioned by two late Enquiries into the Meaning of Demoniacks in the New Testament' in 1738. His learned researches into the history of astronomy opened in 1746 with 'A Letter to Martin Folkes, Esq., concerning the Rise and Progress of Astronomy amongst the Ancients.' The subject was continued in 'A Further Account of the Rise and Progress of Astronomy among the Ancients, in three Letters to Martin Folkes, Esq.' (Oxford, 1748), treating severally of the Astronomy of the Chaldeans, of the Constellations in the Book of Job, and of the Mythological Astronomy of the Ancients. The drift of his arguments was to show that exact astronomy was a product of Greek genius, beginning with Thales, and owed little either to Egypt or Babylon.

His essay on 'The Use of Astronomy in History and Chronology, exemplified in an Inquiry into the Fall of the Stone into the Ægospotamos, said to have been foretold by Anaxagoras' (London, 1764), served as a further preparation for the work by which he is chiefly remembered. 'The History of Astronomy, with its Application to Geography, History, and Chronology, occasionally exemplified by the Globes' (London, 1767, 4to), received a distinctive value from the ample stores of Greek and Oriental erudition displayed in it. Designed chiefly for the use of students, demonstration accompanied narrative, the purpose of discovery being thus illustrated as well as its origin related. An 'Account of the Arabian Astronomy,' extracted from its pages, was included in the first volume of the 'Asiatic Miscellany,' printed at Calcutta in 1785.

Costard died at Twickenham, on 10 Jan. 1782, aged 71, in such poverty that the expenses of his funeral were defrayed by a subscription among his parishioners (*Monthly Review*, 1787, lxxvi. 419). By his particular desire he was buried, without monument or inscription to mark his grave, in Twickenham Churchyard. His library, oriental manuscripts, and philosophical instruments were sold by auction in March 1782.

Besides the works already mentioned, he wrote: 1. 'Some Observations tending to illustrate the Book of Job . . .' Oxford, 1747. 2. 'Two Dissertations (i.) containing an Enquiry into the Meaning of the Word *Kesitah*, mentioned in Job xlii. 11; (ii.) on the Signification of the Word *Hermes*,' Oxford, 1750, criticised the same year in a tract from an unknown hand, entitled 'Marginal Animadversions,' &c. 3. 'Dissertationes duæ Critico-Sacræ: quarum prima explicatur

Ezek. xiii. 18, altera vero 2 Reg. x. 22,' Oxford, 1752, of which the latter was the object of a bitter anonymous attack in 'A Dissertation upon 2 Kings x. 22, translated from the Latin of Rabbi C——d' (Costard). 4. 'A Letter to Nathaniel Brassey Halhead, Esq., containing some Remarks on his Preface to the Code of Gentoo Laws lately published,' Oxford, 1778, disputing the high antiquity claimed for them; besides some papers in the 'Philosophical Transactions' (xliii. 522, xliv. 476, xlviii. 17, 155, 441, lxvii. 231). Costard edited the second edition of Dr. Hyde's 'Veterum Persarum, et Parthorum, et Medorum Religionis Historia,' issued under his superintendence from the Clarendon Press in 1760, and published, with a preface by himself, Halley's translation of the 'Spherics' of Menelaus (Oxford 1758). He contributed to the first edition of Nichols's 'Literary Anecdotes,' and his correspondence with Mr. Jacob Bryant touching the locality of the land of Goshen is published in 'Miscellaneous Tracts by the late William Bowyer and several of his learned friends,' London, 1785, p. 681. A letter written by Costard, 29 March 1761, to Dr. Birch on the meaning of the phrase 'Sphæra Barbarica,' used by Julius Firmicus and Scaliger, is preserved in manuscript at the British Museum (Birch MS. 4440, f. 89). His works are still worth consulting for the frequent references to and citations from Hebrew, Arabic, and the less-known Greek authors contained in them.

COSTE, PIERRE (1668-1747), translator, was born in October 1668 in France, at the town of Uzès, where his father was a substantial cloth and wool merchant. The revocation of the Edict of Nantes seems to have driven him from France at an early age, and he was accepted for the protestant ministry at a synod held at Amsterdam in 1690. He preached, however, but seldom, and soon devoted himself exclusively to literature, translating works from Latin, Italian, and English, and writing what remains his most important original contribution to literature, a life of Condé.

Coste had translated Locke's 'Thoughts concerning Education' and 'Reasonableness of Christianity,' and was in 1697 translating the 'Essay concerning Human Understanding,' when he was made tutor to Frank Masham, the son of Lady Masham, Cudworth's daughter. Locke then resided with Sir Francis and Lady Masham at Oates in Essex, and Coste became intimate with the philosopher, who superintended the translation of the 'Essay' most minutely, even 'correcting the original in several passages,' according to Le Clerc, 'in order to make them plainer and more easy of translation.' When Locke died in 1704, Coste wrote a kind of character or 'éloge' of him, which was published in Bayle's paper, the 'République des Lettres,' for February 1705. It was republished in a 'Collection of several pieces of Mr. John Locke' (1720), and in the second edition of Coste's translation of the 'Essay' (Amsterdam, 1729). Des Maizeaux, the editor of the 'Collection of Several Pieces,' had inserted Coste's 'character' in that work 'at the request of some of the friends' of 'Mr. Locke,' who 'judge its publication necessary, inasmuch as Coste, 'in several writings, and in his common conversation, has aspersed and blackened the memory of Mr. Locke.' No public 'aspersion' is traceable, and it seems more than probable that the republication of the 'character' in the second edition of the translation of the 'Essay' was Coste's reply to Des Maizeaux's challenge. At the same time there seems scarcely room for doubt that Coste thought he had some grievance against Locke; for Coste's biographer observes: 'that learned man did not deal very generously by Coste, which, however, did not prevent the latter from publishing a fine and just eulogium of him after his death.'

When Locke died, Coste was successively tutor to several young noblemen and gentlemen, and, among others, to the son of Lord Shaftesbury, the philosopher, with whom he was on terms of considerable intimacy. Meanwhile, and afterwards, his pen was busy, not with much original work, but with translations from Lady Masham, Lord Shaftesbury, Newton (the 'Optics'), and with annotated editions of La Fontaine, Montaigne, &c. His original work is indeed in no sense remarkable; but his translations were of durable service, and helped to introduce English thought to the French of the eighteenth century. It was through them that Bayle, who did not know English, became acquainted with Locke's 'Human Understanding.' The translations of Locke's works have been republished many times, that of the 'Essay on Education' as lately as 1882.

Coste, who appears to have had some knowledge of science, was made a foreign member of the Royal Society. His name appears for the first time in the list of members for 1743. He died in Paris on 24 Jan. 1747.

It is stated that there was a monument to his memory in old Paddington Church, but no trace can be found of that monument in the existing edifice.

[A short biographical notice prefixed to the third edition of the Life of Condé (the Hague, 1748). This book contains what seems to be a complete list of Coste's works, and a portrait. References to Coste will also be found in Mr. Fox Bourne's Life of John Locke (1876); in the Lettres choisies de M. Bayle (Rotterdam, 1714), and in the notes to the article on Locke in the first edition of the Biog. Brit.] F. T. M.

COSTELEY, GUILLAUME (1531–1606), organist and 'valet du chambre du roy' to Henry II and Charles IX of France, according to Fétis (*Dictionnaire des Musiciens*, vol. ii. ed. 1860), the son of Scotch parents, is said to have been born in 1531. He was a prolific composer of French chansons for several voices, many of which are still extant in the collections printed by Nicholas du Chemin, Adrien Le Roy, Robert Ballard, and Jean Bellère between 1554 and 1597. The Municipal Library of Orleans is said also to contain a manuscript collection of part-books, in which are many of his compositions. A passage in Antoine du Verdier's 'Bibliothèque' (Lyons, 1585, p. 476), repeated in the 'Bibliotheca Exotica' of G. Draudius (ed. 1625, p. 209), has been taken to mean that he was the author of a treatise 'La Musique,' printed by Le Roy and Ballard at Paris in 1579; but no copy of this is known, though Fétis mentions that the work is a quarto. It is therefore possible that Du Verdier only records the publication of Costeley's music at this date. In his later years Costeley retired to Evreux, where in 1571 he took a prominent part in establishing a guild in honour of St. Cecilia, of which he was chosen the first chief officer or prince. In the rolls of the guild Costeley's name occurs as fourth in rank, and when in 1575 a 'puy' or musical competition was established by the guild, he contributed ten livres and a yearly subscription of a hundred sols. The winner of the first prize—a silver harp—at the first public competition was Orlando de Lassus. It is also recorded that when Costeley was elected prince he gave a dinner and supper at his house, 'le Moullin de la Planche.' He died at Evreux, 1 Feb. 1606.

[Bonnin and Chassant's Puy de Musique érigé à Evreux, 1838; Mendel's Musik. Lexikon; Eitner's Bibliographie der Musik-Sammelwerke des 16ten und 17ten Jahrhunderts, 1877, p. 494; authorities quoted above.] W. B. S.

COSTELLO, DUDLEY (1803–1865), author and journalist, was born in Sussex in 1803. His father, James Francis Costello, who became a captain in the 14th regiment 25 May 1803, was born in the barony of Costello, county Mayo, and died at an early age, leaving his wife and two children in impoverished circumstances. The son Dudley was educated for the army at Sandhurst, and received a commission from that college as ensign in the 34th regiment on 4 Oct. 1821, but his regiment being in India and continuing there, he was placed on half-pay on 27 Sept. 1823. He joined the 96th regiment on 29 Jan. 1824, served on the staff in North America and the West Indies, and as an ensign went on half-pay on 10 Sept. 1828. While residing in Bermuda he showed much early literary talent by editing and writing, in a hand like print, a weekly journal entitled 'The Grouper,' which he continued with small means for a considerable period. After his return to England he joined his mother and sister in Paris with hopes that through the interest of Mr. Canning, to whom he was related through that statesman's mother, he might obtain some appointment which would prevent the necessity of a return to his regiment, but by the death of Canning his chance of preferment came to an end. For some months he was associated as an artist with the labours of the ichthyological department of the 'Règne Animal' under Baron Cuvier. After this he devoted himself to copying illuminated manuscripts in the Bibliothèque Royale. His copies of the work of King René of Sicily on 'Tournaments and their Laws' are most accurate and beautiful, and were much admired in Paris. He continued for some years to draw in this manner, and he and his sister [see COSTELLO, LOUISA STUART] were in fact the first to call public attention to manuscript copying both in Paris and in the British Museum. He helped his sister in her works on the 'Early Poetry of France' and the 'Persian Rose Garden,' which they enriched with curious illustrations laboriously executed by hand. He returned to London in 1833. In 1838 he accepted the place of foreign correspondent to the 'Morning Herald,' being a very good linguist, and for some time lived at Hanover. Paris and London afterwards divided his time, and in 1846 he was the foreign correspondent of the 'Daily News.' For thirty years he was a contributor to many of the periodicals of the day, including 'Bentley's Miscellany,' 'The New Monthly Magazine,' 'Household Words,' and 'All the Year Round,' and was also connected with the 'Examiner' from 1845. As an author, his charming 'Tour through the Valley of the Meuse' is still much appreciated in Belgium. The drawings in it are executed by himself, and are done with his

usual delicacy. His industry and his talents did not, however, serve to make him rich, and on 19 April 1861 he was glad to accept a civil list pension of 75*l.* a year. He married, on 23 Sept. 1843, Mary Frances, widow of J. D. Tweedy of Warley House, near Halifax. Her death, on 1 May 1865, contributed to his end, for an insidious malady declared itself when his broken spirits could not afford him the means of rallying. He tried a journey through Spain to divert his melancholy, but it failed of its effect, and a work on Spain which he had projected was not even attempted by him. He died of granular degeneration of the kidneys at 54 Acacia Road, St. John's Wood, London, on 30 Sept. 1865, aged 62. He was the author of: 1. 'A Tour through the Valley of the Meuse, with the Legends of the Walloon Country and the Ardennes,' 1845. 2. 'Stories from a Screen,' 1855. 3. 'The Joint-Stock Bank,' 1856. 4. 'The Millionaire of Mincing Lane,' 1858. 5. 'Faint Heart never won Fair Lady,' 1859. 6. 'Holidays with Hobgoblins,' 1861. 7. 'Piedmont and Italy, from the Alps to the Tiber, illustrated with a series of views taken on the spot,' 1859-61.

[Gent. Mag. November 1865, p. 659; Bentley's Miscellany, November 1865, pp. 543-50; Examiner, 7 Oct. 1865, p. 637.] G. C. B.

COSTELLO, LOUISA STUART (1799-1870), miniature painter and author, only sister of Dudley Costello [q. v.], was born in 1799, and, after the early death of her father, went with her mother in 1814 to Paris. Although not sixteen she was a proficient artist, and was able to add so considerably to her mother's pension by painting miniatures that she maintained her young brother at Sandhurst College, and assisted him not only while he served in the army, but subsequently till his death. Removing after some years to London to practise miniature painting as a profession, and almost unknown, she published in 1825 'Songs of a Stranger,' dedicated to Lisle Bowles. They are graceful verses, and so tunable that some of them set to music became popular. Her pale pretty face and engaging conversation soon gained friends, none firmer or more helpful than Sir Francis and Lady Burdett and their daughter. 'The Maid of the Cyprus Isle and other Poems' attracted the attention of Thomas Moore, to whom, in 1835, she dedicated 'Specimens of the Early Poetry of France.' This work, by which she first became generally known, procured for her the friendship of Sir Walter Scott, and caused her to devote herself entirely to literature. With her brother, to whom she was devotedly attached, she was one of the first to call attention to the occupation of copying illuminated manuscripts, and she worked at this business herself both in Paris and in London. She was one of the most voluminous and popular writers of her day. Her best books, describing those parts of France least known in England, combine graphic description with anecdotal archæology which varies the narrative of travel and adventure. Louis-Philippe marked his approval of these works by presenting Miss Costello with a very valuable jewelled ornament. She at length acquired by her industry a small competence, which was supplemented by a liberal pension from the Burdett family, and on 9 Aug. 1852 she was awarded a civil list annuity of 75*l.* Her mother died at Munich in 1846, and her brother died in 1865, when, although she was blessed with troops of friends in England, she retired to live alone at Boulogne. Here she died from the effects of a virulent cancer in the mouth on 24 April 1870, and was buried in the cemetery of St. Martin, Boulogne, on 27 April. She was the author of the following works: 1. 'The Maid of the Cyprus Isle and other Poems,' 1815. 2. 'Redwald, a Tale of Mona, and other Poems,' 1819. 3. 'Songs of a Stranger,' 1825. 4. 'Specimens of the Early Poetry of France, from the Time of the Troubadours and Trouvères to the Reign of Henri Quatre,' 1835. 5. 'A Summer among the Bocages and the Vines,' 1840. 6. 'A Pilgrimage to Auvergne from Picardy to Le Velay,' 1841. 7. 'The Queen's Poisoner, or France in the 16th Century,' 1841; republished as 'Catherine de Medicis, or the Queen Mother,' 1859. 8. 'Gabrielle, or Pictures of a Reign,' 1843. 9. 'Memoirs of Eminent Englishwomen,' 1844. 10. 'Béarn and the Pyrenees, a Legendary Tour,' 1844. 11. 'The Falls, Lakes, and Mountains of North Wales,' 1845. 12. 'The Rose Garden of Persia,' 1845. 13. 'A Tour to and from Venice, by the Vaudois and the Tyrol,' 1846. 14. 'Jacques Cœur, the French Argonaut, and his Times,' 1847. 15. 'Clara Fane, or the Contrasts of a Life,' 1848. 16. 'Memoirs of Mary, the young Duchess of Burgundy,' 1853. 17. 'Memoirs of Anne, Duchess of Brittany,' 1855. 18. 'The Lay of the Stork, a poem,' 1856.

[Athenæum, 7 May 1870, p. 612; Men of the Time, 1868, p. 204.] G. C. B.

COSTELLO, WILLIAM BIRMINGHAM, M.D. (1800-1867), surgeon, was born near Dublin, received his education in that city, and established himself in London about 1832 as a consulting surgeon. Subsequently he became medical superintendent of Wyke House Asylum, near Isleworth. The latter

part of his life was spent in Paris, where he devoted himself chiefly to literature, and where he died on 15 Aug. 1867.

He edited the 'Cyclopædia of Practical Surgery, including a copious bibliography,' of which twelve parts were published at London, 1841–3, 8vo; and was author of numerous contributions to medical science.

[Lancet, 31 Aug. 1867, p. 282; Gent. Mag. ccxxiii. 540.] T. C.

COSWAY, MARIA CECILIA LOUISA (*fl.* 1820), miniature painter, was born in Florence at an uncertain date. Her father, said by some to have been an Irishman by birth and by others a native of Shrewsbury, was named Hadfield. He kept an hotel at Leghorn, and was able to live in a luxurious style. She was one of several children, but she, a brother, and a younger sister were the only survivors of a tragical occurrence. A lunatic nurse killed four of Maria's brothers and sisters, under the persuasion that her victims would be translated at once to heaven, and was arrested after she had been overheard talking of murdering Maria. The nurse was sentenced to imprisonment for life. Maria was educated in a convent, and afterwards went to Rome, where she studied art under Battoni, Mengs, Fuseli, and Joseph Wright of Derby. On her father's death she expressed a strong desire to become a nun; her mother, however, brought her to England, where she became acquainted with Angelica Kauffmann, and took to miniature-painting, employing her talent chiefly in representing mythological subjects. In 1781 she exhibited for the first time at the Royal Academy the following three works: 'Rinaldo,' 'Creusa appearing to Æneas,' engraved in mezzotint by V. Green, and 'Like patience on a monument smiling at grief.' In the same year she married Richard Cosway [q. v.], and it is recorded that her manners were so foreign that he kept her secluded till she mastered the English language. However, Mrs. Cosway soon made her reputation as an artist, especially when the portrait of the fair Duchess of Devonshire in the character of Cynthia was exhibited. Among her personal acquaintances were Lady Lyttelton, the Hon. Mrs. Damer, the Countess of Aylesbury, Lady Cecilia Johnston, and the Marchioness of Townshend. Some say that she ran away from her husband, while others tell us, on the contrary, that she led a happy life with him. There seems to be no doubt that Mrs. Cosway did on one occasion take a tour on the continent without her husband, accompanied by Signor Luigi Marchesi, an Italian tenor of great reputation, whose portrait Richard Cosway painted, and afterwards engraved by Luigi Schiavonetti (1790). During her residence in Lyons she sought the shelter of the cloister, and also made a pilgrimage to the shrine of the Virgin at Loreto, in fulfilment of a vow to do so if blessed with a living child. In 1804 she returned to London and resumed her art and evening parties. She now set out with her brother, George Hadfield, the artist, for Rome, which she was unable to reach through illness. She lived in north Italy for three years, and then came to England. The death of her only child, Louisa Paolina Angelica, during her absence threw Mrs. Cosway upon art once more, and she executed several pictures for chapels. The father had the child's body embalmed and placed in a marble sarcophagus; yet Walpole writes: 'The man Cosway does not seem to think much of the loss.' Again Mrs. Cosway went to France, notwithstanding the war between England and that country. In Paris she was persuaded by Cardinal Fetch to establish a college for young ladies. This, however, failed; but she afterwards carried out the plan at Lodi. Her sister Charlotte married Mr. W. Coombe, the author of 'Dr. Syntax.' The date of Mrs. Cosway's death is unknown. Some authorities say a few months after her husband's death in July 1821, and others that she was living in 1833. It is certain that in June 1826 she was in correspondence with the Italian engraver, Giovan Paolo Lasinio, junior, respecting the publication of her husband's drawings in Florence. The folio volume is entitled: 'Raccolta di Disegni Originali scelti dai Portafogli del celebre Riccardo Cosway, R.A., e primo pittore del Serenissimo Principe di Wallia, posseduti dalla di lui vedova, la Signora Maria Cosway, e intagliati da Paolo Lasinio, figlio,' Firenze, 1826. Among the many engraved portraits of her after her husband the following may be mentioned: by Valentine Green, Luigi Schiavonetti, Francesco Bartolozzi, Anthony Cardon, and a group with the title, 'Abelard and Eloisa in the Garden of Fulbert's Country Residence at Corbeil,' by R. Thew, 1789. Her principal works engraved and exhibited at the Royal Academy are 'Clytie,' by V. Green; 'The Descent from the Cross,' by V. Green; 'Astrea instructing Arthegal,' by V. Green; 'The Judgment on Korah, Dathan, and Abiram,' by S. W. Reynolds; 'A Persian,' by Emma Smith; 'H.R.H. the Princess of Wales and the Princess Charlotte,' by S. W. Reynolds; 'The Hours,' by F. Bartolozzi; 'Lodona,' by F. Bartolozzi; 'The Guardian Angel,' by S. Phillips; 'Going to the Temple,' by P. W. Tomkins; 'The Birth of the Thames,' by P. W. Tomkins; 'Creusa appearing to Æneas,' by V. Green;

'The Preservation of Shadrach, Meshac, and Abednego,' by W. S. Reynolds; and 'Louis VII, King of France, before Becket's Tomb,' by W. Sharp. Mrs. Cosway drew 'The Progress of Female Dissipation,' and 'The Progress of Female Virtue,' published in 1800; besides, she brought out a series of twelve designs, entitled 'The Winter's Day,' contributed to Boydell's 'Shakespeare Gallery' and Macklin's 'Poets.' She etched all the plates in a large folio work bearing the following title, 'Gallery of the Louvre, represented by etchings executed solely by Mrs. Maria Cosway, with an Historical and Critical Description of all the Pictures which compose the Superb Collection, and a Biographical Sketch of the Life of each Painter, by J. Griffiths, &c. &c.,' Paris, 1802, and numerous other plates, some in soft-ground etching, most of which are in the department of prints and drawings, British Museum.

[Clayton's English Female Artists, London, 1876, 8vo, i. 314; Cunningham's Lives of British Painters, London, 1836, 8vo, vi. 1; Smith's Nollekens and his Times, London, 1828, 8vo, ii. 392; manuscript notes in the British Museum.]

L. F.

COSWAY, RICHARD (1740–1821), painter in water-colour, oil, and miniature, was born at Tiverton, Devonshire, in 1740. His father was master of the public school there, but the son received his first education at a school in Okeford, near Bampton, and very early displayed a strong disposition to the art of painting. He was therefore sent to London, at the expense chiefly of his uncle, who had been mayor of Tiverton, and his earliest patron, one Oliver Peard. He now studied under Thomas Hudson, Sir Joshua Reynolds's master, and afterwards joined William Shipley's academy of drawing in the Strand. John Thomas Smith, in 'Nollekens and his Times' (London, 1828), ii. 392, relates that Cosway when a boy was noticed by Mr. Shipley, who took him to wait upon the students and carry in the tea and coffee which the housekeeper was allowed to provide, and for which she charged threepence per head. The students, among whom were Nollekens and Smith's father, good-temperedly gave 'Dick' instructions in drawing, and advised him to try for a prize in the Society of Arts, where, in 1755, he obtained a premium of 5*l.* 5*s.* for a drawing. In 1757 he gained another premium of 4*l.* 4*s.*, in 1758 one of 4*l.* 4*s.*, in 1759 a premium of 2*l.* 2*s.*, and in 1760 another of 10*l.* 10*s.* He also excelled as a draughtsman from the antique, in the Duke of Richmond's gallery in Privy Garden, Whitehall. After the expiration of his engagement with Shipley, Cosway began to teach in Parr's drawing school and to execute heads for shops, besides fancy miniatures, not always chaste, and used for lids of snuff-boxes. From the money he earned and from the gaiety of the company he kept Cosway rose 'from one of the dirtiest boys to one of the smartest men.' Smith tells us how he saw him at the elder Christie's picture sales, full dressed in his sword and bag, with a small three-cornered hat on the top of his powdered *toupé* and a mulberry silk coat, profusely embroidered with scarlet strawberries. In addition to his artistic works, which he disposed of readily, Cosway increased considerably his income by dealing in old pictures.

In 1766 he became a member of the Incorporated Society of Artists, and in 1769 a student at the Royal Academy. At this period he resided in Orchard Street, Portman Square. His talent and great reputation gained him an early admission to the Academy, for he was elected an associate in 1770, and a full academician in 1771. He exhibited at the Royal Academy, somewhat irregularly, forty-five miniatures. In 1781 he married Maria Hadfield, a native of Italy, distinguished for her talents and beauty [see COSWAY, MARIA], and now resided at No. 4 Berkeley Street, Berkeley Square, and three years later in Pall Mall, in the centre portion of the house built for the Duke of Schomberg. Hence he moved to a residence at the corner of Stratford Place, Oxford Street, in what was then considered one of the best London mansions (see Crace Collection, department of prints and drawings, British Museum, portfolio xxix. plates 95, 96; and ACKERMANN, *Repository of Arts*, 1 March 1815). He left his house on account of some satirical verses referring to the sculptured lions (still in existence) near his doorway:

When a man to a fair for a show brings a lion,
'Tis usual a monkey the sign-post to tie on;
But here the old custom reversed is seen,
For the lion 's without, and the monkey 's within.

The lines, posted on his door, are supposed to have been composed by Peter Pindar (Dr. Wolcott). Cosway moved to No. 20 in the same street. Here he practised his art with immense success, and fashionable people were in the habit of making his studio a morning lounge. The house was magnificently furnished; it contained, moreover, a large collection of paintings, principally by masters of Dutch and Flemish schools, majolica, arms, prints, drawings, &c. The Prince of Wales's carriage was frequently seen at the door, Cosway having painted a remarkable minia-

ture, engraved by John Condé, of Mrs. Fitzherbert afterwards. His professional engagements at Carlton House were, it is said, so frequent that when residing in Pall Mall, Cosway had a private communication with Carlton Palace Gardens. He was appointed principal painter to his royal highness the Prince of Wales, and it was generally believed among artists that Cosway received from his royal patron in one year no less a sum than 10,000*l.* Owing to his wife's delicate health they went to Paris, where, at the instance of the Duchess of Devonshire, he painted the Duchess of Orleans and family and the Duchess of Polignac. They also visited Flanders together, but afterwards separated for some considerable time. During his latter years he endured great physical pain. Twice he was stricken with paralysis, and on 4 July 1821, when living at Edgware, he died suddenly while taking an airing in the carriage with his old friend Miss Udney. Cosway often expressed a wish to be buried either in St. Paul's or near Rubens at Antwerp, but he lies in the vault, north wall, of Marylebone Church, where a monument, by R. Westmacott, was erected to his memory by his widow. The sculpture (see a print by Charles Picart, measuring 14 in. by 11½ in.) represents a medallion of the artist in right profile, surrounded by three figures of genii, emblematic of art, taste, and genius, with some verses by his brother-in-law, William Coombe ('Dr. Syntax').

In person Cosway was unlike his numerous portraits by himself, which have usually the air of a cavalier of romance. He occasionally painted in oil with a strong predilection for Correggio, and one of these productions he presented to his parish church of Tiverton. He showed, in his later years, a decided tendency towards mysticism, being a Swedenborgian and a strong believer in animal magnetism. He often alluded to mysterious conversations with the Virgin Mary, with Dante, and Apelles. His most popular portraits were small whole-length figures, executed in a somewhat sketchy style, with the exception of the head and hands, which were highly finished. He had a beautiful and clever daughter, Louisa Paolina Angelica. At the age of five her portrait, after Cosway, was engraved by Anthony Cardon. She possessed a natural taste for drawing and music, and was set by her father to study Hebrew when ten years old, in order that she might read the Bible in the original. She died young. His own portraits have been engraved by J. Clarke, Mariano Bovi, William Daniell, and R. Thew. About 1770 Dighton drew a caricature of Cosway, afterwards engraved by Richard Earlom in mezzotint, and published by Bowles and Carver. It is called 'The Macaroni Painter, or Billy Dimple sitting for his Picture' (see *Catalogue of Satirical Prints* in the British Museum, 1883, iv. 712, No. 4520). There is in the National Portrait Gallery a miniature of himself in water colours painted by himself (4 in. by 3 in.) In the British Museum there are several, but slight, sketches by his hand, and at Blenheim three portraits, viz. George Spencer Churchill, fourth duke of Marlborough, George, fifth duke of Marlborough, and his brother, Lord Charles S. Churchill, when boys, in fancy costume, and a fancy portrait of Lady Caroline Spencer Churchill, daughter of George, fourth duke. To these may be added the following compositions, portraits, &c., engraved in mezzotint: a portrait of James Hutton, engraved by J. R. Smith; 'Wisdom directing Beauty and Virtue to Sacrifice at the Altar of Diana,' engraved by J. R. Smith. The figures in this picture are portraits of Lady Margaret Corry, Lady Harriet Butler, and Juliana, countess of Carrick; 'Sigismond,' engraved by Blackmoore; Lady Hume, by V. Green; Miss Elliot, in the character of Minerva, by I. Saunders; 'Love,' by I. G. Fluck; and 'Europa,' by J. R. Smith. In the stipple manner: 'Infancy,' by C. White; 'The Royal Infant,' by F. Bartolozzi; Caroline, Princess of Wales, and the Princess Charlotte, by F. Bartolozzi; the Right Honourable Lady Anna Maria Stanhope, by A. Cardon; Madame Récamier, by A. Cardon; Major-general R. C. Ferguson, M.P., by A. Cardon; Frederick, duke of York, by G. Hadfield; George, prince of Wales, by J. Condé; and others engraved by I. S. Agar, I. Godefroy, G. Minasi, W. Sharp, L. Salliar, C. Townley, &c. A book entitled 'A Miscellaneous Metaphysical Essay; or, an Hypothesis concerning the Formation and Generation of Spiritual and Material Beings, &c. By an Impartial Inquirer after Truth,' London, 1748, 8vo, is erroneously ascribed to Cosway in the British Museum Library Catalogue. The sale of his collection of drawings and prints took place at Stanley's 14 Feb. (eight days) 1822. He stamped these drawings with the letters 'C. R.' (see FAGAN, *Collectors' Marks*, London, 1883, 8vo, No. 119).

[Art Journal, 1858, p. 268; Cunningham's Lives of British Painters, &c., London, 1833, 8vo, vi. 1; G. C. Williamson's Richard Cosway, his wife and pupils, 1897.] L. F.

COSWORTH or COSOWARTH, MICHAEL (*fl.* 1600), translator of the psalms, born in 1568, was the son of John Cosworth, a London mercer, of a Cornish family, by

Dorothy, daughter of Sir William Locke, alderman of London, and widow of Ottiwell Hill, another London mercer. He matriculated as a pensioner at St. John's College, Cambridge, in December 1576, and proceeded B.A. in 1579–80. Richard Carew, the well-known topographer of Cornwall [q. v.], was Cosworth's cousin, and writes of him thus in his 'Survey of Cornwall,' p. 145: 'He addicteth himself to an ecclesiastical life, and therein joining Poetry with Divinity, endeavoureth to imitate the holy prophet David, whose Psalmes of his translation into English metre receiveth general applause beyond a great many other well-deserving undertakings of the same type.' These translated psalms were not printed by the author, but were apparently widely circulated in manuscript. A manuscript copy—a neatly written quarto volume—is among the Harleian MSS. at the British Museum (No. 6906). The author's cousins, Carew and Henry Locke, contribute commendatory verses. Only selected psalms are translated; the metres are various; and the work is not conspicuous for literary merit. Extracts have been printed in Farr's 'Selected Poetry' (Parker Soc.), and in Brydges's 'Excerpta Tudoriana,' i. 48–51. Cosworth also contributed verses to Henry Locke's 'Ecclesiastes' (1597).

Cosworth and his family appear to have removed to Cornwall, their true home, in the seventeenth century. The well-known judge, Sir John Bramston the elder [q. v.], whose wife was distantly related to the Cosworths, had a clerk of that name, who retired to Cornwall before 1640, and resided there with a brother, a justice of the peace with a good estate (Sir John Bramston the younger's *Autobiography* (Camd. Soc.), p. 13). Cosworth, the translator, has been conjecturally identified with both Bramston's clerk and his brother, the Cornish justice. Henry Locke, the translator's cousin, wrote to the Earl of Salisbury (8 Nov. 1605) that 'Mr. Cosowarth,' justice of the peace for Cornwall, was ready to place at the earl's disposal the representation of a borough there.

S. L.

COTES, FRANCIS, R.A. (1725?–1770), portrait painter, born in London about 1725, was the son of Robert Cotes, an apothecary in Cork Street, Burlington Gardens, who had been mayor of Galway, but who, having fallen under the censure of the Irish House of Commons, left Ireland, and settled in London about 1720. Young Cotes became a pupil of George Knapton, and soon outstripped his master. He became eminent for his portraits in crayons, in which branch of art he surpassed all his predecessors, though it has been said that he owed something of his excellence to the study of the works of Rosalba. He also painted in oil colours with considerable ability, and his portraits are often good pictures, although somewhat hard and coarsely pencilled. Hogarth declared, probably not without a little malice, that Cotes was a better painter than Reynolds; but this opinion posterity has not endorsed. His crayon portraits are well drawn and have been much admired, and among them none are better than that of Queen Charlotte, with the Princess Royal asleep on her lap, belonging to the Duke of Northumberland, which was exhibited in the National Portrait Exhibition of 1867. Cotes was at one time a member of the Incorporated Society of Artists, at whose exhibitions he exhibited forty-eight pictures, but he seceded from it, and was one of the artists who memorialised George III for the establishment of the Royal Academy of Arts, of which he became one of the first academicians. He enjoyed a reputation in his day, and fashion followed him from London to Bath, and back again. He was very early in life afflicted with stone, to which he fell a victim before he attained the age of forty-five, through having imprudently taken soaplees as a cure. He died 19 July 1770 at Richmond, Surrey, where he was buried. His residence, 32 Cavendish Square, London, was afterwards occupied by Romney, and then by Sir Martin Archer Shee. Among his best portraits in oil are the group of Joah Bates [q. v.] and his wife, in the possession of Mr. Henry Littleton, the full-length portrait of Admiral Lord Hawke at Greenwich Hospital, a portrait of Mary, duchess of Norfolk, at Arundel Castle, and that of his father, his diploma work, in the Royal Academy. Most of his draperies were painted by Peter Toms, R.A. Many of his portraits have been engraved by McArdell, Houston, Valentine Green, James Watson, and others. The only portrait of him which ever existed was a large miniature painted from memory by his brother, Samuel Cotes [q. v.]

[Walpole's Anecdotes of Painting, ed. Wornum, 1849, ii. 711; Edwards's Anecdotes of Painters, 1808, p. 33; Sandby's Hist. of the Royal Academy of Arts, 1862, i. 95; Redgraves' Century of Painters of the English School, 1866, i. 42; Redgrave's Dict. of Artists of the English School, 1878; Seguier's Critical and Commercial Dict. of the Works of Painters, 1870.]

R. E. G.

COTES, ROGER (1682–1716), mathematician, was the second son of the Rev. Robert Cotes, rector of Burbage in Leicestershire, where he was born 10 July 1682. His mother, Grace, daughter of Major Farmer of Barwell in the same county, was connected with the noble family of the De Greys. Before the age of twelve he discovered, while at Leicester school, so marked an aptitude for mathematics, that his uncle, the Rev. John Smith, took him to his house in Lincolnshire, that he might personally forward his studies. Removed to St. Paul's School, London, he made rapid progress in classics under Dr. Gale, then head-master, while keeping up a scientific correspondence with his uncle, portions of which have been preserved and published (*Correspondence of Newton and Cotes*, p. 190 et seq.) He was admitted a pensioner of Trinity College, Cambridge, 6 April 1699, was chosen fellow at Michaelmas 1705, and acted as tutor to his relatives, the sons of the Marquis, afterwards Duke, of Kent. In the following year he proceeded M.A., having taken a degree of B.A. in 1702. While still an undergraduate, his extraordinary proficiency in science had attracted the notice of Dr. Bentley, the master of his college. Bentley introduced him to Newton and Whiston, whose testimonials in his favour, combined with Bentley's influence, procured his election, in January 1706, to the new professorship of astronomy and natural philosophy founded by Dr. Plume, archdeacon of Rochester, then recently dead. Whiston, who, as occupant of the Lucasian chair, was one of the electors, thus describes his share in the transaction: 'I said that I pretended myself to be not much inferior in mathematics to the other candidate's master, Dr. Harris, but confessed that I was a child to Mr. Cotes; so the votes were unanimous for him' (WHISTON, *Memoirs*, p. 133).

The project of founding, with his co-operation, a first-class astronomical observatory in Trinity College was now eagerly embraced by Bentley. He raised a subscription for its erection over the King's Gate, and obtained a college order, assigning the chambers there in perpetuity to the Plumian professor. Here, accordingly, during the remaining decade of his life, Cotes dwelt with his cousin, Robert Smith, whom he chose as his assistant; and here his lectures were delivered. He did not live to see the observatory finished, and it was demolished in 1797. A brass sextant of five feet radius, constructed by Rowley at a cost of 150*l.*, was part of its equipment; Newton contributed a fine pendulum clock; and a transit instrument was in hand early in 1708 (*Corr. of Newton and Cotes*, p. 198). The total solar eclipse of 22 April (O.S.) 1715 furnished Cotes with the opportunity of making his only recorded astronomical observation, relative to which Halley communicated the following particulars to the Royal Society:—

'The Rev. Mr. Roger Cotes at Cambridge had the misfortune to be opprest by too much company, so that, though the heavens were very favourable, yet he missed both the time of the beginning of the eclipse and that of total darkness. But he observed the occultations of the three spots . . . also the end of total darkness, and the exact end of the eclipse' (*Phil. Trans.* xxix. 253).

His description and drawing, however, of the sun's corona, transmitted 12 May to Newton, amply compensate some technical shortcomings. A brilliant ring, about one-sixth the moon's diameter, was perceived by him superposed upon a luminous cross, the longer and brighter branches of which lay very nearly in the plane of the ecliptic. The light of the shorter (polar) arms was so faint as not to be constantly visible (*Corr. of Newton and Cotes*, pp. 181–4). This is precisely the type of corona seen in 1867 and 1878, and associated therefore with epochs of sun-spot minimum. But spots were numerous in 1715, so that Cotes's observation goes far to disprove the supposed connection.

In the beginning of 1709 Bentley at length persuaded Newton, by the offer of assistance from Cotes, to consent to a reissue of the 'Principia.' It was not, however, until September that a corrected copy of the work was placed in the hands of the new editor, when the remarkable correspondence between him and Newton ensued, preserved in the original in the library of Trinity College, and published by Mr. Edleston in 1850. It must be admitted that the younger man's patience was often severely tried by Newton's long cogitations over the various points submitted to him; but it proved imperturbable. 'I am very desirous,' he wrote to Sir William Jones, 30 Sept. 1711, 'to have the edition of Sir Isaac Newton's "Principia" finished, but I never think the time lost when we stay for his further corrections and improvements' (*Corr. of Newton and Cotes*, p. 209). Of all his contemporaries, Cotes possessed the strongest and clearest grasp of the momentous principles enunciated by his author. He suggested many rectifications and improvements, for the most part adopted by Newton. The frequently interrupted process of printing occupied some three and a half years. Cotes's preface, an able defence of the Newtonian

system against Cartesian and other objectors, was dated 12 May 1713; the impression at the University Press was finished about the middle of June. The reception of the work was most flattering to the editor. His preface was retained, in the original Latin, in the edition of 1726, and was anglicised in Andrew Motte's English version of the 'Principia' in 1729. Bentley was profoundly gratified at the encomium upon himself contained in it; and spoke of Cotes, in a letter to Bateman, as 'one of the finest young men in Europe' (Monk, *Life of Bentley*, p. 266).

Cotes was chosen a member of the Royal Society in 1711; he took orders in 1713. His sole independent appearance as an author during his lifetime was in an essay styled 'Logometria,' inscribed to Halley, and communicated to the Royal Society in 1713 by the advice of Newton (*Phil. Trans.* xxix. 5). It treated of measures of ratios, contained directions for constructing Briggs's canon of logarithms, and exemplified its use for the solution of such problems as the quadrature of the hyperbola, the descent of bodies in a resisting medium, and the density of the atmosphere at any given height. Designs of further publication, timidly entertained, were destined to prove abortive. Cotes died 5 June 1716, of a violent fever, in the thirty-fourth year of his age. 'Had Cotes lived,' Newton exclaimed, 'we might have known something!' And he was no less loved than admired, attractive manners combining with beauty of person and an amiable disposition to endear him to all with whom he came in contact. He was buried in the chapel of Trinity College, the restoration of which he had actively superintended; and the monument erected to his memory by his cousin and successor, Robert Smith, was adorned with an epitaph composed by Bentley under the influence of genuine sorrow. The master was not only attached to him as a friend, but valued him as one of his most zealous adherents; and had entertained the highest expectations of his career. Its premature close was felt in his college as a calamity the keen sense of which the lapse of a century failed to obliterate.

Robert Smith undertook the office of his literary executor. His papers were found in a state of baffling confusion. The resulting volume, dedicated to Dr. Richard Mead, bore the title 'Harmonia Mensurarum, sive Analysis et Synthesis per Rationum et Angulorum Mensuras promotæ: Accedunt alia Opuscula Mathematica per Rogerum Cotesium. Edidit et auxit Rob. Smith,' Cambridge, 1722. The first part included a reprint from the 'Philosophical Transactions' of the 'Logometria,' with extensive developments and applications of the fluxional calculus. The beautiful property of the circle known as 'Cotes's Theorem' was here first made known. Two months before his death Cotes had written to Sir W. Jones, 'that geometers had not yet promoted the inverse method of fluxions, by conic areas, or by measures of ratios and angles, so far as it is capable of being promoted by these methods. There is an infinite field still reserved, which it has been my fortune to find an entrance into' (*Phil. Trans.* xxxii. 146), adding instances of fluxional expressions which he had found the means of reducing. Upon this letter Dr. Brook Taylor based a challenge to foreign mathematicians, successfully met by John Bernoulli in 1719; and by it Smith was incited to a search among Cotes's tumbled manuscripts for some record of the discovery it indicated. His diligence rescued the theorem in question from oblivion. It was generalised by Demoivre in 1730 (*Miscellanea Analytica*, p. 17), and provided by Dr. Brinkley in 1797 with a general demonstration deduced from the circle only (*Trans. R. Irish Acad.* vii. 151).

The second part of the volume comprised, under the heading 'Opera Miscellanea,' 1. 'Æstimatio Errorum in mixta Mathesi per variationes Partium Trianguli plani et sphærici.' The object of this tract was to point out the best way of arriving at the most probable mean result of astronomical observations. It is remarkable for a partial anticipation of the 'method of least squares,' as well as for the first employment of the system of assigning different weights to observations (p. 22, see also A. de Morgan, *Penny Cycl.* xiii. 379). It was reprinted at Lemgo in 1768, and its formulæ included in Lalande's 'Traité d'Astronomie.' 2. 'De Methodo Differentiali Newtoniana' professes to be an extension of the method explained in the third book of the 'Principia,' for drawing a parabolic curve through any given number of points. 3. 'Canonotechnia' treats of the construction of tables by the method of differences. Its substance was translated into French by Lacaille in 1741 (*Mem. Ac. des Sciences*, 1741, p. 238). Three short papers, 'De Descensu Gravium,' 'De Motu Pendulorum in Cycloide,' and 'De Motu Projectilium,' followed, besides copious editorial notes.

Cotes's 'Harmonia Mensurarum' was, Professor De Morgan says, 'the earliest work in which decided progress was made in the application of logarithms and of the properties of the circle to the calculus of fluents' (*Penny Cycl.* viii. 87). But though highly

praised, it was little read. The style was concise even to obscurity. A requisite and excellent commentary was, however, furnished by Dr. Walmesley in 1753 (*Analyse des Mesures, des Rapports, et des Angles*). Cotes's 'theorem of harmonic means,' discovered by Smith among his papers, and communicated to Maclaurin, was made the basis of the latter's treatise, 'De linearum geometricarum proprietatibus generalibus' (London, 1720).

Smith announced his intention of publishing further papers by Cotes on arithmetic, the resolution of equations, dioptrics, and the nature of curves, but it remained unfulfilled. Only in his own work on optics he founded a chapter (ch. v. book ii.) on a 'noble and beautiful theorem,' stated to have been the last invention of his lamented relative. He edited, moreover, in 1738, his 'Hydrostatical and Pneumatical Lectures,' issued for the third time in 1775, and translated into French by Lemonnier in 1740 under the title 'Leçons de Physique Expérimentale.' The course of experiments for which they were composed, begun at Cambridge by Cotes and Whiston conjointly, 5 May 1707, was among the earliest of its kind given in England. Twelve lectures were written by each of the partners, and were repeated by Whiston and Hauksbee in London, and, in part, by Smith at Cambridge. The publication of Cotes's set was finally compelled by the prospect of a surreptitious edition. Whiston considered his own so inferior that he could never prevail upon himself to print them.

A 'Description of the Great Meteor,' a brilliant aurora, 'which was on the 6th of March 1716 sent in a letter from the late Rev. Mr. Roger Cotes to Robert Dannye, D.D., rector of Spofferth in Yorkshire,' was included in the 'Philosophical Transactions' for 1720 (xxxi. 66). Cotes's zeal for practical astronomy only waited opportunity for full development. He remodelled Flamsteed's and Cassini's solar and planetary tables, and had undertaken to construct tables of the moon on Newtonian principles; while his description of a heliostat-telescope furnished with a mirror revolving by clockwork (*Corr. of Newton and Cotes*, p. 198) showed that he had already in 1708 (independently, it is probable, of Hooke's project of 1674), anticipated the system of equatorial mounting.

COTES, SAMUEL (1734–1818), miniature painter, was third son of Robert Cotes, mayor of Galway, who settled in London, adopting the medical profession, and married Elizabeth, daughter of Francis Lynn, chief secretary to the Royal African Company, by whom he was the father of Francis Cotes [q. v.] and Samuel. The latter was brought up by his father to the medical profession, but was encouraged by his brother's great success as a painter to throw over medicine for the fine arts. He received instruction from his brother, who greatly assisted him; and though he never attained the eminence his brother succeeded in doing, he became deservedly and highly esteemed as a portrait painter, and was reckoned the first miniature painter of his time. His crayon portraits were also much admired. He painted in miniature both on enamel and on ivory, and exhibited from 1760 to 1789 at the exhibitions of the Incorporated Society of Artists, of which he was a fellow, and at the Royal Academy. During this time he resided at 25 Percy Street, Rathbone Place. He was devotedly attached to his brother, and after the latter's death he painted a large miniature of him from memory. Cotes retired from active life some years before his death, and then resided in Paradise Row, Chelsea, where he died 7 March 1818 in his eighty-fifth year. He was twice married, first to a Miss Creswick, and secondly to Miss Sarah Shepherd, a lady of great attainments, especially as an artist, who died 27 Sept. 1814, aged 76. A portrait by him of Mrs. Yates, as Electra, was engraved in mezzotint by Philip Dawe, and a portrait of Thomas Pownall, governor of New Jersey, was similarly engraved by Richard Earlom.

[Redgrave's Dict. of English Artists; Gent. Mag. (1814) lxxxiv. 403, (1818) lxxxviii. 276; Edwards's Anecdotes of Painting; Chaloner Smith's Catalogue of British Mezzotinto Portraits; Catalogues of the Royal Academy and the Incorporated Society of Artists.] L. C.

COTGRAVE, JOHN (*fl.* 1655), probably related to Randle Cotgrave [q. v.], and a member of the Cheshire family of Cotgreve,

was the author of 'The English Treasury of Literature and Language collected out of the most and best of our English Dramatick Poems,' London, 1655. The author is described as 'gent.' on the title-page. The British Museum possesses Oldys's copy of this work, in which the source of nearly every extract quoted is noted in manuscript. The handwriting is of the seventeenth century, and is not Oldys's. Cotgrave's second publication is of singular interest. It is entitled 'Wit's Interpreter: the English Parnassus, by J. C.,' Lond. 1655. It contains a prose treatise on the 'Art of Reasoning, or A New Logick;' 'Theatre of Courtships,' extracts from plays of lovers' dialogues; 'A Labyrinth of Fancies,' a collection of conundrums, arithmetical puzzles, and conjuring tricks; 'Apollo and Orpheus,' a collection of love songs, epigrams, drolleries, and other verses; 'The Perfect Inditer, or Letters à la mode,' a model letter-writer; 'Compliments à la mode;' and finally Richelieu's cipher interpreted. Some of the dialogues and poems are very broad, but they include several pieces not accessible elsewhere. Other editions of this book appeared in 1662 and 1671.

[Cotgrave's Works; Hunter's MS. Chorus Vatum in Brit. Mus. Addit. MS. 24492, f. 14; Gent. Mag. 1821, pt. ii. 415–6.] S. L.

COTGRAVE, RANDLE (*d.* 1634?), lexicographer, may possibly be Randal, son of William Cotgreve of Christleton in Cheshire, who is mentioned in the pedigree of the Cotgreve family, contained in Harl. MS. 1500, fol. 118. A fact which gives some support to this identification is that the Cotgreve arms, as depicted in this manuscript, are (with the exception of some trifling discrepancies in the tinctures, due probably to error on the part of the copyist) the same as those which appear on a seal used by Randle Cotgrave on one of his extant autograph letters. The arms borne by Hugh Cotgrave, Richmond herald in 1566, who has sometimes been supposed to be the father of Randle Cotgrave, are quite different. It is certain that Randle Cotgrave belonged to Cheshire, and that he was admitted scholar of St. John's College, Cambridge, on the Lady Margaret foundation, 10 Nov. 1587. He subsequently became secretary to William Cecil, lord Burghley, eldest son of Thomas, first earl of Exeter. In dedicating to Lord Burghley his French-English dictionary, Cotgrave says that to his patron's favour he owes 'all that he is or has been for many years,' and thanks him for his kindness in 'so often dispensing with the ordinary assistance of an ordinary servant.' The dictionary was first published in 1611; a second edition was published in 1632, together with an English-French dictionary by Robert Sherwood. Subsequent editions, revised and enlarged by James Howell, appeared in 1650, 1660, and 1673. The author presented a copy of the first edition of his work to Prince Henry, eldest son of James I, and received from him a gift of ten pounds. Cotgrave's dictionary, although not free from ludicrous mistakes, was, for the time at which it was published, an unusually careful and intelligent piece of lexicographical work, and is still constantly referred to by students, both of English and of French philology. Two autograph letters of Cotgrave are extant, both addressed to M. Beaulieu, secretary to the British ambassador at Paris. The first of these, dated 27 Nov. 1610, was printed in 'Notes and Queries,' 3rd ser. viii. 84, and relates to the progress that was being made with the printing of his dictionary, in the preparation of which he says that he had received valuable help from Beaulieu himself and from a Mr. Limery. In the other letter (*Harl. MS.* 7002, fol. 221) Cotgrave states that he has sent his correspondent two copies of his book, and requests payment of twenty-two shillings, 'which they cost me, who have not been provident enough to reserve any of them, and therefore am forced to be beholden for them to a base and mechanicall generation, that suffers no respect to weigh down a private gain.' It appears from this letter that Cotgrave was still in Lord Burghley's service. If he be the same person as the 'Randal Cotgreve' of the Harl. MS., he became subsequently registrar to the bishop of Chester, and married Ellinor Taylor of that city, by whom he had four sons, William, Randolf, Robert, and Alexander, and a daughter Mary. The 1632 edition of the dictionary was evidently carried through the press by the author himself, the year of whose death is given in Cooper's 'Memorials of Cambridge' as 1634.

[Harl. MSS. 1500, fol. 118, 7002, fol. 221; Joseph Hunter, in Addit. MS. 24492, fol. 14; Cooper's Memorials of Cambridge, ii. 113; Notes and Queries, 2nd ser. x. 9, 3rd ser. viii. 84; Cunningham's Extracts from the Accounts of the Revels (Shakespeare Soc.), p. xvi.] H. B.

COTMAN, JOHN SELL (1782–1842), architectural draughtsman and landscape-painter, was the son of a prosperous silk mercer and dealer in foreign lace at Norwich, whose place of business was in London Lane of that town, and whose residence was a small villa on the bank of the river Yare at Thorpe. Cotman was born on 16 May 1782, and was educated at the free grammar school at Norwich, under

Dr. Forster. He was intended for his father's business, but showing a decided preference for art went to London, most probably in 1798 or 1799, for purposes of study, and made the acquaintance of Turner, Girtin, Dewint, and others of the group of young artists who met together at Dr. Monro's in the Adelphi. He was, however, one of the later comers, being some seven years younger than Turner, and nine years younger than Girtin. He must also have already attained much skill, for he exhibited at the Royal Academy in 1800, and thenceforward to 1806, chiefly views in Wales. In 1807 he returned to Norwich and became a member of the Norwich Society of Artists, and a prolific contributor to their exhibitions. He painted portraits as well as landscapes, and several of these were included in his large contribution to the Norwich Exhibition of 1808, which contained no less than sixty-seven of his works. In 1810 he became vice-president, and in 1811 president, of the Norwich Society. Early in life he married Ann, the daughter of Edmund Miles, a farmer of Felbrigg near Cromer, by whom he had five children. As in the case of Crome his principal means of livelihood was obtained from giving lessons in drawing, and his good looks and pleasant manners assisted his success with the families in the neighbourhood. One of his pupils was afterwards Mrs. Turner, the wife of Mr. Dawson Turner, the botanist and antiquarian [q. v.], a lady of considerable artistic gifts, by whose hand there is an etched portrait of Cotman after J. P. Davis. Dawson Turner was one of the artist's most constant friends. They were united by a community of taste in art and archæology, and Cotman taught all his children drawing, and was associated with him in an important work on the architectural antiquities of Normandy. Cotman soon began to publish etchings of architecture by subscription. His first volume appeared in 1811, and consisted of twenty-four plates of ancient buildings in various parts of England. Next year was commenced his 'Specimens of Norman and Gothic architecture in the county of Norfolk,' a series of fifty plates completed and published in a volume in 1817. Next year appeared 'A Series of Etchings illustrative of the Architectural Antiquities of Norfolk' (sixty plates), and the year after 'Engravings of the most remarkable of the Sepulchral Brasses in Norfolk,' and 'Antiquities of St. Mary's Chapel at Stourbridge, near Cambridge.' During 1818 and 1819 was published 'Excursions in the County of Norfolk,' a work neither published nor projected by him, but illustrated by numerous small engravings after drawings by himself and others. His industry must have been very great when we consider the time occupied by his etchings, his drawing classes, and the large number of drawings in water colours which he also executed, besides an occasional portrait or other picture in oils. From the catalogues of the Norwich exhibitions we learn that in 1809 and in 1810 he was living in Wymer Street, Norwich. He then removed to Southtown, Yarmouth, returning to Norwich in 1825, when he took a stately red brick house in St. Martin's at Palace. Here he had a large collection of prints and books, some fine armour, and models of many kinds of vessels, from a coble to a man-of-war. During this time Cotman gave lessons at both Norwich and Yarmouth, and we learn from the 'Norwich Mercury' of 2 Aug. 1823 that his terms 'in schools and families' were a guinea and a half and two guineas the quarter, and for 'private lessons for finishing more advanced pupils, 24 lessons, 12 guineas.'

In 1817 Cotman accompanied Dawson Turner and his family on a tour in Normandy, which he visited again in 1818 and 1820. The result of these visits to the continent was shown in his 'Architectural Antiquities of Normandy,' which appeared in 1822, with letterpress by Dawson Turner. As an etcher he, according to his own statement, took Giovanni Battista Piranesi for a model, and there is a breadth and simplicity of treatment about them which shows the influence of this master, but he was less conventional than the Venetian, and also less forcible in light and shade. These etchings of Cotman's, as picturesque records of various forms of architecture, are admirable, but they did not call out his more imaginative gifts as an artist. These are better seen in a small collection of forty-eight 'soft' etchings which he published (1838) in a volume called 'Liber Studiorum,' in imitation of Claudę and Turner, some of which, by their charming composition, poetry of sentiment, and elegant drawing, recall both these masters.

In 1825 Cotman was elected an associate exhibitor of the Society (now the Royal Society) of Painters in Water-colours, and from this year till 1839 he was a constant contributor to their exhibitions, sending views of France and Norfolk, landscapes and sketches of figures. In 1834 he obtained, greatly through the persistent championship of Turner, the appointment of drawing-master to King's College, London, a position he filled with great success, and in which he was succeeded by his eldest son, Miles Edmund. The appointment compelled him to reside in London, where he seems to have spent a hard-working but retired life in Hunter Street (No. 42), Brunswick Square. His last years were

clouded with ill-health and mental depression, which interfered seriously with his work and his happiness. The statement in Redgrave's 'Dictionary of Artists of the English School' that Cotman ultimately lost his reason is unwarranted, but there is no doubt that he suffered from fits of alternate melancholy and excitement, and that the mental condition of more than one of his children gave him great anxiety. Some letters which have been preserved show this and also the strength of his affections, his desire to do his duty towards his children, and the courage with which he endeavoured to meet the difficulties of life. In 1836 he was elected an honorary member of the Institute of British Architects, and after this, except the publication of 'Engravings of the Sepulchral Brasses in Norfolk,' 173 plates, 1839, there is no other event of sufficient importance to chronicle before his death, which occurred 24 July 1842. He was buried in the cemetery behind St. John's Wood Chapel on 30 July. His collections at Norwich had been sold when he left that place in 1834, but the contents of his house in Hunter Street were sufficient to occupy five days' sale at Christie's. On 17 and 18 May 1843 his drawings and pictures were sold by his executors at Christie's, and realised 262*l.* 14*s.* only, nearly all the drawings fetching but a few shillings apiece. The highest price obtained for a water-colour drawing was 6*l.*, and for an oil-painting 8*l.* 15*s.* His library, which contained many rare and beautiful works, was sold on 6 and 7 June, and realised 277*l.* 18*s.* 6*d.*, and his prints, sold on 8 June, brought only 29*l.* 12*s.*

The reputation of Cotman as an artist has greatly increased of late years. It is now seen that he was one of the most original and versatile of English artists of the first half of this century, a draughtsman and colourist of exceptional gifts, a water-colourist worthy to be ranked among the greater men, and excellent whether as a painter of land or sea. Although the variety of his sympathy for both art and nature was so great that his drawings and pictures differ much in style, they are generally remarkable for largeness of design and unusual breadth of light and colour. It was his principle to 'leave out but add nothing,' and no one has carried 'omissions' to a more daring extent than he in some of his later works, where great spaces of wall or of sky are 'left,' to the sacrifice of detail but the enhancing of the general effect. His oil-pictures are comparatively few. He had not time for them in his busy life, but he painted a few large in size and fine in style and colour. Taking him altogether he was the most gifted of the Norwich School, wider in range, a finer draughtsman, and of more refined and cultivated individuality than 'Old Crome' [q. v.]; but his efforts needed concentration to produce their due effect, and there can be little doubt that if he had had more time to devote to the production of important pictures he would have taken much higher rank as an artist while he lived, and have before now achieved a reputation as a colourist equalled by few of his countrymen. There is one picture by Cotman in the National Gallery, and some water-colour drawings at the South Kensington Museum.

Some fine oil-pictures of his—'The Mishap,' a 'Sea Breeze,' and a 'Composition,' with a waterfall and bridge—are in the possession of Mr. J. J. Colman, M.P., at Carrow House, near Norwich, and Mr. J. S. Mott of Barningham Hall has a small but very beautiful 'Gale at Sea.' Mr. Colman has also a good collection of his sketches, and Mr. J. Reeve of Norwich has a large number of sketches and drawings, including many good drawings illustrating the different phases of the artist from 1794 to 1841. Many of his pictures have been exhibited of late years at the winter exhibitions of the Royal Academy, especially in 1875 and 1878.

[Redgrave's Dict.; Redgraves' Century of Painting; Bryan's Dict. (Graves); Wedmore's Studies in English Art, 1st series; Wodderspoon's John Crome and his Works, edited by Bacon, 1876; notes left by the late Edwin Edwards, and communications from Mr. J. Reeve of Norwich.] C. M.

COTMAN, JOSEPH JOHN (1814–1878), landscape artist, was the second son of John Sell Cotman, and was apprenticed to his uncle Edmund, who had succeeded to his (John's) grandfather's business [see COTMAN, JOHN SELL]. After about two years' apprenticeship he made the acquaintance of Joseph Geldart, a solicitor of Norwich, who was fond of sketching, and Cotman, who down to that time had not applied himself to art, now determined to follow the profession of an artist. Geldart did the same, and the two friends worked together assiduously. He went to London with his father in 1834, and remained there till 1836, when he returned to Norwich to take his brother Miles's [q. v.] practice as drawing-master. He was a good teacher and an artist of much original power, but he suffered from periodical attacks of cerebral excitement, followed by depression, which presented an insuperable bar to success in life. As he grew older these attacks became more frequent; but in the intervals he worked with remarkable energy, producing a large quantity of drawings, many of them of great merit.

In his later years he was often reduced to destitution. In February 1878 he went into the Norfolk and Norwich Hospital to undergo an operation for cancer of the tongue. The operation seemed quite successful, but his elation at the thoughts of recovery brought on symptoms of his malady, and imprudently leaving his room in the hospital to sketch in the early morning caused a relapse, from which he did not recover. He died at the hospital 15 March 1878, leaving a widow and several children.

[Information communicated by Mr. James Reeve of Norwich.] C. M.

COTMAN, MILES EDMUND (1810–1858), landscape painter, eldest son of John Sell Cotman [q. v.], was born 5 Jan. 1810. He was brought up as an artist under his father's instruction. He continued to teach his father's pupils and classes at Norwich after the latter was appointed drawing-master at King's College, London. In 1836 he was appointed assistant to his father at King's College, and in 1843 succeeded him in his appointment; but, owing to a change in the arrangements which would have required a longer attendance at the college than his health permitted, he did not hold the appointment long. In the latter part of his life he resided at North Walsham, where he continued painting and teaching till his health declined. He was admitted into the Norfolk and Norwich Hospital in December 1857, suffering from disease of the ankle-joint, and died there 23 Jan. 1858.

Cotman painted river and sea views in oil and water colours, and etched a few plates, some of which were published by C. Muskett of Norwich; he also lithographed twelve facsimiles of sketches made by his father in Norfolk, which were published. His works are marked by taste and skill rather than by power or originality. He exhibited four works at the Royal Academy, ten at the British Institution, and nineteen at the Society of British Artists between 1835 and 1856.

[Information communicated by Mr. James Reeve of Norwich; Graves's Dict. of Artists.] C. M.

COTTA or COTTEY, JOHN, M.D. (1575?–1650?), physician and author, was a native of Warwickshire, but nothing is known of his parentage. In 1590 he was admitted a scholar of Trinity College, Cambridge, and five years later, after taking the B.A. degree, he removed to Corpus Christi College, where, in the following year, he proceeded to the M.A. degree. He obtained the M.D. degree in 1603, and immediately took up his residence at Northampton, where, through the patronage and influence of Sir William Tate, he acquired a considerable professional practice. He was still at Northampton in 1623, and possibly as late as 1650, if the date assigned to a manuscript opinion of Cotta's, on the poisoning of Sir Euseby Andrews, be correct. In 1612 he published 'A Short Discoverie of the Unobserved Dangers of Seuerall Sorts of Ignorant and Unconsiderate Practisers of Physicke in England, profitable not only for the Deceived Multitude and Easie for their Meane Capacities, but raising Reformed and more Advised Thoughts in the Best Understandings: with Directions for the Safest Election of a Physition in necessitie' (London, 1612, 4to). This book was dedicated to the author's patients in Northamptonshire, and seems to have met with but indifferent success, for in 1617 there appeared 'A True Discovery of the Empericke with the Fugitive Physition and Quacksalver, who Display their Banners upon Posts; whereby His Majestie's Subjects are not only deceived, but greatly endangered in the Health of their Bodies,' which was merely a remainder of the original edition of 'A Short Discoverie' with a new title-page. In the previous year the work by which Cotta is best remembered had made its appearance. This was 'The Triall of Witchcraft, showing the true Methode of the Discovery with a Confutation of Erroneous Ways' (London, 1616, 4to). The erroneous ways of proving a witch confuted by Cotta are those by means of fire and water and the like, which are convincingly shown to be foolish and misleading; but the author would have deserved more credit had he not at the same time expressed the interested opinion that the best method of discovering witchcraft is to take a physician's advice on the subject. A second edition of the book was published in 1625 under the new title of 'The Infallible, True and Assured Witch,' and differing in some few unimportant particulars. The only other work which Cotta published was 'Cotta contra Antonium, or an Ant-Antony, or an Ant-Apology, manifesting Doctor Antony his Apologie for Aurum potabile, in true and equall ballance of Right Reason, to be false and counterfeit' (Oxford, 1623, 4to); which was Cotta's contribution to the great Anthony controversy [see ANTHONY, FRANCIS]. In addition to these three works Cotta left behind him the manuscript above referred to —'The Poysoning of Sir Euseby Andrew. My opinion at the Assizes in Northampton, also my evidence,' which was first printed in 1881 by J. Taylor from the original in the

possession of Sir Charles Isham, bart., at Lamport Hall, Northamptonshire.

Whatever interest attaches to Cotta's writings is dependent on the matter contained in them, his literary style being, as he himself seems to have been aware, singularly cumbrous and far from lucid.

[Add. MS. 5866, fol. 223; Masters's Hist. of C. C. C. C. p. 272; Brit. Mus. Cat.] A. V.

COTTAM, THOMAS (1549–1582), jesuit, was a native of Lancashire, being son of Laurence Cottam, gentleman, of Dilworth and Tarnaker, by his wife Anne, daughter of Mr. Brewer, or Brewerth, of Brindle, who after her husband's death married William Ambrose, gentleman, of Ambrose Hall in Woodplumpton (GILLOW, *Bibl. Dict. of the English Catholics*, i. 575). He entered at Brasenose College (B.A. 23 March 1568–9; M.A. 14 July 1572), and on the completion of his academical studies he undertook the direction of a noted free grammar school in London (DODD, *Church Hist.* ii. 116). He was converted to the Roman catholic faith by Thomas Pounde, esq., of Belmont (afterwards a jesuit), and proceeded to Douay College, where he studied philosophy and theology for some years (MORUS, *Hist. Missionis Anglicanæ Soc. Jesu*, p. 127). Ardently desiring to take part in the mission to the East Indies, he left Douay for Rome, where he received the two lower sacred orders, was admitted to the Society of Jesus, and entered the novitiate of St. Andrew on 8 April 1579 (FOLEY, *Records*, ii. 148). In the sixth month of his noviceship he was attacked by violent fever, and was sent by his superiors to Lyons for change of air, but the sickness increasing, he appeared unfit for the society, and therefore was dismissed from the novitiate (CHALLONER, *Missionary Priests*, ed. 1741, i. 103). Cottam then went to the English college of Douay, then temporarily removed to Rheims, was ordained priest, and sent to England on the mission. On his arrival at Dover in June 1580, he was immediately arrested, having been betrayed by a spy named Sledd. Eventually he was committed to the Marshalsea prison, where he was tortured, and thence he was removed on Christmas day to the Tower of London, where he underwent the most terrible tortures of the rack and the 'Scavenger's Daughter' (TANNER, *Societas Jesu usque ad sanguinis et vitæ profusionem militans*, pp. 18, 19; FOLEY, *Records*, ii. 159).

On 14 Nov. 1581 he was arraigned at Westminster Hall with Father Edmund Campion and others, and condemned to death on account of his priestly character (HOWELL, *State Trials*, i. 1078); SIMPSON, *Life of Campion*, p. 281 et seq.) His execution was deferred for state reasons until 13 May 1582, when he was drawn on a hurdle from Newgate to Tyburn, with his companions William Filbie, Luke Kirby, and Laurence Richardson, priests, and was hanged, disembowelled, and quartered (*Historia del glorioso Martirio di diciotto Sacerdoti macerati*, 1585, p. 149). It is said that he was readmitted to the Society of Jesus shortly before his execution. He was beatified by Pope Leo XIII on 29 Dec. 1886.

His portrait has been engraved (GRANGER, *Biog. Hist. of England*, ed. 1824, i. 274).

[Authorities cited above.] T. C.

COTTENHAM, EARL OF. [See PEPYS, CHARLES CHRISTOPHER, 1781–1851.]

COTTER, GEORGE SACKVILLE (1755–1831), poet and translator, was the fourth son of Sir James Cotter. He was educated at Westminster School, of which he was captain in 1770, and in 1771 he was elected to St. Peter's College, Cambridge. He graduated B.A. in 1775 and M.A. in 1779. Having taken holy orders he became vicar of Kilmacdonough, and rector of Kilcreddan-Garrivoe and Ightermorragh, diocese of Cloyne. In 1788 he published two volumes of 'Poems,' dedicated to Lady Shannon, and consisting of a poem in two books, entitled 'Prospects,' and a collection of odes and other fugitive pieces. In 1826 he published a translation of Terence for the use of schools, in the preface to which he states that when at Westminster School he had been an actor in three of Terence's comedies. In the following year he printed seven of the plays of Plautus, 'translated literally and grammatically, and cleared of objectionable passages.' The later years of his life were spent at Youghal, Cork, and he died in 1831. By his wife, a daughter of Bayley Rogers, physician and banker of Cork, he left, with other issue, four sons.

[Welch's Alumni Westmonasterienses, ed. 1852, pp. 383, 393, 394, 534, 536, 573; Foster's Baronetage and Knightage.] T. F. H.

COTTER, PATRICK (1761?–1806), Irish giant, was born at Kinsale, co. Cork, in or about 1761, of poor parents of ordinary stature. He was brought up as a bricklayer, but at the age of eighteen was hired by a showman for exhibition in England for the sum of 50*l.* for three years. Soon after his arrival at Bristol, owing to a disagreement with his master, he was thrown into the debtors' prison for a fictitious debt. Upon his release he established himself at the Bristol fair, and earned 30*l.* in three days. After the manner of Irish giants he changed his name to O'Brien,

claiming to be a lineal descendant of Brian, king of Ireland [q. v.], and to have 'in his person and appearance all the similitude of that great and grand potentate.' Until the last two years of his life he continued to travel throughout the country exhibiting himself. In 1804, having realised an independence, he retired into private life, and died at his lodgings in the Hotwell Road, Clifton, on 8 Sept. 1806, in the forty-sixth year of his age. He was buried in the jesuit chapel in Trenchard Street, Bristol, where a tablet to his memory states that he was eight feet three inches in height. The inscription on his coffin-plate, however, was 'Patrick Cotter O'Brien of Kinsale, Ireland, whose stature was 8 feet 1 inch. Died 8 Sept. 1806, aged 46 years.' It is impossible to reconcile the numerous discrepancies with regard to his height. According to Mr. Blair's account, written in 1804, Cotter 'could not have been more, on the whole, than 7 feet 10 inches' (*Gent. Mag.* vol. lxxiv. pt. i. pp. 420–1); while the catalogue of the contents of the Royal College of Surgeons (pt. v. 1831, p. 51), in the description of a plaster cast of one of his hands, states that his 'height in the year 1802 was 8 feet 7 inches and a half.' An engraving by T. Smith of the giant was published in 1785, and another by A. Van Assen, dated 1804, is given in the second volume of Kirby (opp. p. 332). There is also a curious etching by Kay done in 1803, when Cotter was in Edinburgh (vol. ii. No. 210). The giant is here portrayed in the act of being measured for a great coat by a little tailor standing on tiptoe on a chair, while one of Cotter's arms rests carelessly on the top of the roomdoor. Cotter has often been confused with Charles Byrne [q. v.], another Irish giant, who died in London in 1783.

[Wood's Giants and Dwarfs, 1868, pp. 166–187, 375, 385, 457–8; Kirby's Wonderful and Scientific Museum, 1804, ii. 332–7; Gent. Mag. 1806, vol. lxxvi. pt. ii. p. 983; Wilson's Wonderful Characters, 1821, i. 415–22; Kay's Original Portraits and Caricature Etchings, 1877, ii. 115–17; Chambers's Book of Days, 1864, ii. 326–7; Notes and Queries, 2nd ser. iii. 436, xi. 369, 396.]

G. F. R. B.

COTTERELL, Sir CHARLES (1612 ?–1702), master of the ceremonies and translator, born in 1612, was son of Sir Clement Cotterell of Wylsford, Lincolnshire, groomporter to James I for twenty years, who was appointed muster-master of Buckinghamshire by the influence of Villiers in December 1616 (*Egerton Papers*, Camd. Soc. 484). In early life Charles was able to speak and read most modern languages, and in 1641 succeeded Sir John Finet as master of the ceremonies. His closest friend at court was William Aylesbury [q. v.], whom he assisted in translating Davila's 'History of the Civil Wars in France.' On Charles I's execution, Cotterell, as a royalist, fled to Antwerp, and in 1650 entertained at his house there many royalist fugitives, including Dr. George Morley [q. v.] and Dr. John Earle [q. v.] About 1652 he was appointed steward to Charles I's sister, Elizabeth, titular queen of Bohemia, and lived in her house at the Hague for the two following years. He is frequently mentioned in the letters addressed by Elizabeth to Sir Edward Nicholas, and was in the confidence of Sir Edward Hyde and others of Charles II's advisers (*Cal. Clarendon Papers*, ii. 310, 333, 339; cf. Sir G. Bromley, *Coll. Letters*, 1787). In September 1655 Cotterell became secretary to Henry, duke of Gloucester. At the Restoration he returned to England; was reinstated master of the ceremonies; was from 6 April 1663 to 1678 M.P. for Cardigan; lived at Westminster, and was a prominent figure in all the court ceremonials of Charles II's reign. Wood complains that by persistently worrying Archbishop Juxon in 1661 he foisted his brother-in-law, Dr. Thomas Clayton, into the wardenship of Merton College, Oxford, against the wish of the fellows. In 1663 he was sent for a short time as ambassador to Brussels. In 1670 he was nominated master of requests, and in December of the same year the degree of D.C.L. was conferred on him at Oxford, when he accompanied Prince William of Orange on a visit to the university. He was created LL.D., Cambridge, 1682. Cotterell was permitted by James II to resign his offices at court in December 1686, and the mastership of the ceremonies was bestowed on his eldest son, Charles Lodowick, while his grandson, John Dormer, became assistant master. Sir Charles died, according to the 'Mercurius Historicus,' on 19 July 1702.

Cotterell translated: 1. 'A Relation of the Defeating of Card. Mazarin and Ol. Cromwell's design to have taken Ostend by treachery in 1658, from the Spanish' (London, 1660 and 1666). 2. 'The Famous Romance of Cassandra,' from the French of G. de Costes, Seigneur de la Calprenède; Cotterell's dedication to Charles II is dated from the Hague, 5 June 1653; a first edition of a part of the work appeared in 1652, and the whole was issued in 1661, 1676, and (in 5 vols.) 1725. Pepys read 'Cassandra' and preferred it to 'Hudibras' (*Diary*, 16 Nov. 1668 and 5 May 1669). 3. 'The Spiritual Year, or a Devout Contemplation digested into distinct arguments for every month of the year, and for every week in the month,' from the

Spanish (London, 1693). Cotterell republished his own and his friend Aylesbury's translation of 'Davila,' which had first appeared in 1647, in 1678, and claimed the execution of the greater part of the work. Robert Codrington [q. v.] dedicated to Cotterell his 'Memorials of Margaret of Valois,' 1661.

Cotterell married the daughter of Edward West, of Marsworth, Buckinghamshire, by whom he had several children. A daughter Anne was the wife of Robert Dormer, of Rousham, Oxfordshire, and another daughter married Sir William Trumbull. A younger son was killed in the sea fight of Southwold Bay in 1672 (Evelyn, *Diary*, ii. 281).

Sir Charles Lodowick Cotterell, the eldest son and his father's successor in the mastership of the ceremonies in 1686, was knighted on 18 Feb. 1686–7. He was educated at Trinity College, Cambridge, where he took the degree of LL.D.; was incorporated D.C.L. of Oxford on 4 June 1708 (Hearne, *Coll. Oxf. Hist. Soc.* ii. 112); was commissioner of the privy seal in April 1697; obtained the reversion of his mastership of the ceremonies for his son on 31 Jan. 1698–9; was robbed on Hounslow Heath on his way to Windsor on 4 June 1706, and died in July 1710. On the death of Prince George of Denmark in 1708, he published a 'Whole Life' of that prince as a chapbook. A copy is in the Grenville Library at the British Museum. Sir Charles Lodowick married (1) Eliza, daughter of Nicholas Burwell of Gray's Inn, and (2) Elizabeth, daughter of Chaloner Chute.

Sir Clement Cotterell, the son by the first wife, became master of the ceremonies on his father's death; was vice-president of the Society of Antiquaries; is described by Hearne, under date 28 June 1734, as 'a scholar and an antiquary, and well skill'd in matters of proceeding and ceremony' (*Reliquiæ Hearn.* iii. 144); and died on 13 Oct. 1758. On the death of his cousin, General James Dormer [q. v.], in 1741, Sir Clement inherited the Rousham estates and assumed the additional surname of Dormer. Sir Clement's son, who died in 1779, and grandson, who died in 1808, each became master of the ceremonies. The family is still represented by C. Cottrell Dormer, and in his library is a valuable collection of letters and papers relating to Sir Charles, Sir Charles Lodowick, and Sir Clement Cotterell (*Hist. MSS. Comm.* 2nd Rep. 82–3).

[Wood's Fasti (Bliss), ii. 324, 325, 390; Wood's Athenæ Oxon. (Bliss), xliii, xlvi, xlvii, lxii, iii. 433, 441, 717, iv. 151; Notes and Queries, 1st ser. xi. 19, 2nd ser. x. iii. 365, 60, 6th ser. iv. 384; Evelyn's Diary; Luttrell's Relation; Burke's Landed Gentry, s.v. 'Dormer.'] S. L.

COTTERELL, WILLIAM (*d.* 1744), bishop of Ferns and Leighlin, was grandson of Sir Charles Cotterell [q. v.], and the third son of Sir Charles Lodowick Cotterell, by his second wife, Elizabeth, only daughter of Chaloner Chute of the Vyne, near Basingstoke, Hampshire. Sir Clement Cotterell was his brother. One of the same name (probably the future bishop), having passed through Pembroke College, Cambridge, graduated B.A. in 1721, and M.A. three years later (see *Notes and Queries*, 6th ser. iv. 385). In 1725, on the death of Dean John Trench, he was presented to the deanery of Raphoe in the north of Ireland, and the degree of D.D. was conferred upon him by diploma from the university of Oxford 1 March 1733. His promotion to the bishopric of Ferns and Leighlin was by patent dated 24 March 1742–3; but he enjoyed this dignity for little more than twelve months, his death taking place in England on 21 June of the following year. The mention made of him in a letter from Swift to Mrs. Cæsar, dated Dublin, 30 July 1733, would lead us to infer that he was on terms of intimacy with the dean. He died unmarried on 21 June 1744, and was buried at St. Anne's Church, Soho, London, where there is a brief inscription to his memory.

[Burke's Dictionary of the Landed Gentry (1849), i. 342; Catalogue of Oxford Graduates; Cotton's Fasti Ecclesiæ Hibernicæ; Scott's ed. of Swift's Works (1824), xviii. 152.] B. H. B.

COTTESFORD, THOMAS (*d.* 1555), protestant divine, a native of Winchester, studied first apparently at Oxford, and afterwards at Cambridge, where he took the degree of M.A. He adopted the doctrines of the reformers, and in January 1540–1 was charged before the privy council for setting forth an epistle written by Melanchthon in violation of the act of the six articles, and he was committed to the Fleet during the king's pleasure. He held the rectories of St. Peter and St. Andrew in Walpole, Norfolk, which he resigned on 31 May 1544. On 9 June following he was presented to the vicarage of Littlebury, Essex, and in 1547 was appointed preacher to the royal commissioners for visiting the dioceses of Salisbury, Exeter, Bath, Bristol, and Chichester. On 20 May 1553 he was collated to the rectory of St. Martin, Ludgate, London, and on 10 July in the same year preferred to the prebend of Apesthorpe in the church of York (Le Neve, *Fasti*, ed. Hardy, iii. 167). On the accession of Queen Mary he withdrew to the continent, and resided successively at Copenhagen, Geneva, and Frankfort. He died at Frankfort on 6 Dec. 1555.

c

His principal works are: 1. 'The Reckenynge and Declaracion of the Fayth and Belefe of Huldrike Zwingly, Bysshoppe of Züryk,' Zurich, 1543, 8vo; [London ?], 1548, 8vo; Geneva, 1555, 12mo. To the last edition of this translation from the Latin three pieces by Cottesford himself are appended, viz.: 'An Epistle wrytten from Copynhauen in Denmarke vnto an Englyshe Marchaunt dwellyng at Wynchestre in Englande,' 'An Epistle vvritten to a good Lady, for the comforte of a frende of hers, wherein the Nouations erroure now reuiued by the Anabaptistes is confuted, and the synne agaynste the holy Goste playnly declared,' and 'The prayer of Daniel turned into metre and applied vnto our tyme.' This metrical prayer was licensed to John Alde as a ballad in 1569 or 1570. 2. 'Pious Prayers for every Day in the Week,' London, temp. Edward VI, 8vo. 3. 'Marten Micron, minister of the Dutch Church in London, his short and faithfull instruction for the edifyeng and comfort of the symple christians, which intende to receyue the holy Supper of the Lorde,' translated from the Dutch, London [1552]. 4. A translation of John à Lasco on the discipline of the church. Cottesford was also, it is said, engaged in the compilation of the liturgy.

COTTINGHAM, LEWIS NOCKALLS (1787–1847), architect, born at Laxfield, Suffolk, 24 Oct. 1787, was the son of a farmer of an ancient and respectable family. As he quickly showed a taste for science and art, he was apprenticed to a builder at Ipswich, who had an extensive practice, where Cottingham, by several years of industry, acquired a sound practical education. In 1814 he commenced his career as an architect, and removed to London. In 1822 he obtained his first appointment as architect and surveyor to the Cooks' Company, and in 1825 he was selected by the dean and chapter of Rochester to execute repairs and restorations for their cathedral, the latter including a new central tower. He was patronised by Mr. John Harrison of Spelston Hall, Derbyshire, for whom he built a residence at that place in the Perpendicular style of Gothic. Cottingham soon gained a reputation as a Gothic architect, and executed several important works; among these were the restoration of the interior of the chapel at Magdalen College, Oxford, for which he was a successful competitor in 1829; the repairs of St. Albans Abbey (1833); the restoration and almost entire rebuilding of the cathedral at Armagh, a work which extended over several years; the restoration of the tower and spire of St. James's Church at Louth, Lincolnshire, which had been shattered by lightning; the restoration of the beautiful Norman tower of St. James's Church, Bury St. Edmund's; the restoration of Hereford Cathedral, on which he was engaged at the time of his death. In London he actively supported the retention and restoration of the lady chapel in St. Saviour's Church, Southwark, and gave valuable advice and assistance in the restoration of the Temple Church. He sent in designs for the new Fishmongers' Hall and the new Houses of Parliament, but was not successful with either. He exhibited many of his architectural designs at the Royal Academy. Among the minor works may be named: the restoration of the churches of Ashbourne, Derbyshire; Chesterford, Essex; Clifton, Nottinghamshire; Horningsheath, Market Weston, and Theberton in Suffolk; Milton Bryan, Bedfordshire; Roos, Yorkshire, and many others. He executed private works for Lord Brougham at Brougham Castle, Westmoreland; for Lord Harrington at Elvaston Castle, Derbyshire; for Lord Dunraven at Adare Manor, Limerick; and for Lord Craven at Combe Abbey, Berkshire. One of Cottingham's most important works was the laying out, about 1825, of the extensive estates on the Surrey side of Waterloo Bridge, belonging to Mr. John Field of Tooting, and forming the large parish of St. John's, Lambeth. Here he built a residence for himself in Waterloo Bridge Road, which comprised suites of rooms specially designed to receive the valuable collections of architectural works and the library which he formed during his career. These collections were very well known to all students and lovers of Gothic architecture, and contained many specimens of Gothic carving in stone and wood preserved from buildings that had been destroyed. A catalogue was published, but the collection was dispersed, to the regret of all, a few years after his death. Cottingham was a fellow of the Society of Antiquaries and a member of other scientific societies. In 'Archæologia,' vol. xxix., there is published his description of the encaustic tiles in the pavement of the chapter-house at Westminster (engraved from his designs in J. G. Nichols's 'Facsimiles of Encaustic Tiles'), and his account of the discovery in the Temple Church of the leaden coffins of the Knights Templars.

He published from 1822 to 1829: 1. 'Plans, Elevations, Sections, Details, and Views, with Mouldings, full size, of the Chapel of King Henry VII at Westminster Abbey,' and also a second volume containing details of the interior of the same. 2. 'Plans, Elevations, Sections, and Details at large of Westminster Hall.' 3. 'The Smith and Founder's Directory, containing a series of Designs and Patterns for Ornamental Iron and Brass Work.' 4. 'Working Drawings for Gothic Ornaments, selected and composed from the best examples, consisting of capitals, bases, cornices, &c.' These drawings, though rather coarsely executed, are interesting, as being perhaps the first full-size illustrations of mediæval carving published in this form. 5. 'Grecian and Roman Architecture, in twenty-four large folio plates.' Cottingham did a great deal to promote the revival of mediæval Gothic architecture, but, as an architect, is now esteemed more for his draughtsmanship than the works that he carried out; in the latter his enthusiasm for the Gothic revival frequently overcame his discretion in handling the buildings entrusted to his care. He died in Waterloo Bridge Road, after a long illness, 13 Oct. 1847, and was buried at Croydon. He married in 1822 Sophia, second daughter of Robert Turner Cotton of Finsbury, by whom he left two sons and one daughter. The elder son, NOCKALLS JOHNSON COTTINGHAM (1823–1854), also became an architect, and assisted his father, especially in the restoration of Hereford Cathedral, where the reredos is executed from his designs. He showed some skill also in designing for stained glass. After a rather chequered career he perished in 1854 on his way to New York in the wreck of the 'Arctic' at the early age of thirty-one.

[Redgrave's Dict. of Artists; Graves's Dict. of Artists, 1760–1880; Gent. Mag. (1847) pp. 648–50; Builder, 23 Oct. 1847 and 2 Dec. 1856; Athenæum, 16 Oct. 1847; Ipswich Journal, 23 Oct. 1847; Art Union, 1847; Ward's Men of the Reign; Lowndes's Bibl. Man.; Brit. Mus. Cat.] L. C.

COTTINGTON, FRANCIS, BARON COTTINGTON (1578?–1652), born about 1578, was the fourth son of Philip Cottington of Godmonston (COLLINS, *Peerage*, ix. 481), near Bruton in Somersetshire. His mother, according to the pedigree in Hoare (*Modern Wiltshire, Hundred of Dunworth*, 21), was Jane, daughter of Thomas Biflete. Clarendon, however, says 'his mother was a Stafford, nearly allied to Sir Edward Stafford, who was vice-chamberlain to Queen Elizabeth, and had been ambassador to France; by whom Francis Cottington was brought up, and was gentleman of his horse, and left one of the executors of his will, and by him recommended by Sir Robert Cecil, then principal secretary of state, who preferred him to Sir Charles Cornwallis when he went ambassador to Spain in the beginning of the reign of King James' (*Rebellion*, xiii. 30). When Cornwallis was recalled, Cottington acted for a time as English agent (1609–11), and was appointed English consul at Seville (January 1612, GARDINER, *History of England*, ii. 134, 151). On his return to England he was appointed one of the clerks of the council (September 1613, *Court and Times of James I*, i. 273). While holding this position he was employed by Somerset, Lake, and the Spanish party in the king's council to urge Gondomar to press forward the proposal for a Spanish marriage in opposition to the treaty for the marriage of Prince Charles to a French princess then in progress (January 1614, *Narrative of the Spanish Marriage Treaty*, Camd. Soc. 111). In 1616 Digby was recalled from Spain, and Cottington for a time took his place. Through him King James made to the Spanish court his offer of mediation in the Bohemian quarrel (September 1618, *Relations between England and Germany*, Camd. Soc. 10, 19, 26). On his return, Cottington's knowledge of Spanish affairs made him continually in request with the king, and he was also, in October 1622, sworn secretary to the Prince of Wales (*Court and Times of James I*, ii. 352). On 16 Feb. 1623 he was knighted, and created a baronet. He was M.P. for Camelford 1624, for Bossiney 1625, and for Saltash 1628. When Prince Charles resolved to go in person to Spain, Cottington was one of the first persons consulted, and communicated to Clarendon a lively description of the scene between himself, Buckingham, and the king (CLARENDON, i. 30). In spite of his expressed disapproval of the plan, Cottington was charged to accompany the prince, and took part in the negotiations at Madrid which followed. On his return he was disgraced, deprived of his office and emoluments, and forbidden to appear at court. Buckingham had not forgiven his original opposition to the journey, to which he had lately added the fault of protesting his belief that the restoration of the Palatinate was still to be hoped for from the Spanish ministers (GARDINER, *History of England*, v. 321). Buckingham therefore openly announced to Cottington that he would do all he could to ruin him, to which Cottington replied by requesting the return of a set of hangings, worth 800*l.*, which he had presented to the duke in hope of his future favour (CLARENDON, i. 67). After the duke's death

Weston's influence secured Cottington a seat in the privy council (12 Nov. 1628), and on 30 March 1629 the attorney-general was ordered to prepare for him a grant of the chancellorship of the exchequer. In the autumn of 1629 he was sent ambassador to Spain, and signed with that power (5 Nov. 1630) a treaty which put an end to the war, and reproduced, with a few unimportant modifications, the treaty of 1604. This was followed on 2 Jan. 1631 by a secret treaty for the partition of Holland between England and Spain, as the price of the restoration of the Palatinate (GARDINER, *History of England*, vii. 176; *Clarendon State Papers*, i. 49). As a reward the negotiator was raised to the peerage by the title of Baron Cottington of Hanworth, Middlesex (10 July 1631). With Weston and Windebanke Cottington was throughout in the king's confidence with respect to his secret foreign policy, and represented with them in the council the party favourable to Spain, and hostile to France and Holland. Himself a catholic at heart, and usually declaring himself such when seriously ill, Cottington supported the catholic propaganda in England, but was yet not trusted by the catholics. In March 1635 Cottington became master of the court of wards, in which capacity he 'raised the revenue of that court to the king to be much greater than it had ever been before his administration; by which husbandry all the rich families of England, of noblemen and gentlemen, were exceedingly incensed, and even indevoted to the crown' (CLARENDON, ii. 102). His activity in extending the rights of his office was one of the chief causes of its abolition; it also led him into a quarrel with the lord-keeper Coventry (HEYLYN, *Life of Laud*, i. 225). More serious was the hostility between Laud and Cottington which began about the same time. On 16 March 1635 the treasury was put in commission, and both Cottington and the archbishop named commissioners. Both at the treasury board and in the committee for foreign affairs Cottington frequently came into collision with Laud, whose correspondence is full of complaints of his 'Spanish tricks' and general untrustworthiness. In two important cases, the case of the soap-makers' monopoly and the case of Bagge and Pell, Laud and Cottington took opposite sides. He also alarmed Laud by interceding on behalf of Williams, bishop of Lincoln, although, when his case actually came to a judgment, Cottington gave his sentence for the imposition of a fine of 10,000*l.* on the bishop (LAUD, *Works*, vii. 139; RUSHWORTH, ii. 416). In the archbishop's confidential correspondence with Strafford he had termed Portland 'the Lady Mora,' the delayer of the honest and economical administration he sought to introduce; he now wrote of Cottington as the great obstacle, 'the Lady Mora's waiting-maid,' who, perhaps, 'would pace a little faster than her mistress did, but the steps would be as foul' (*Works*, vii. 145). All Cottington's activity was directed to obtaining the treasurership for himself, to secure which he intrigued on every side. In this struggle his self-control, and his acquaintance with the business of the exchequer, enabled him to hold his own against Laud, and sometimes, as in the instance of the enclosure of Richmond Park, to make his adversary ridiculous to the king (CLARENDON, i. 208). Nevertheless, Laud succeeded in securing the treasury for Juxon (6 March 1636), and Cottington became 'no more a leader, but meddled with his particular duties only' (*Strafford Papers*, i. 523, ii. 52). Besides serving on the committee of the council for foreign affairs, Cottington acted also as a member of the committee for Irish affairs appointed in April 1634 (LAUD, *Works*, iii. 67), and of the far more important committee for Scotch affairs (reproachfully called 'the junto,' according to Clarendon) appointed in July 1638 (*Strafford Letters*, ii. 181). In the latter committee he formed one of the war party (*ib.* ii. 186), but his position as chancellor of the exchequer made him still more prominent in the different devices for raising money for the war. In June 1639 Cottington attempted to raise a loan from the city, and, when the aldermen refused, supported Windebanke in urging coercion (GARDINER, *History of England*, ix. 39). In the following May, after the dissolution of the Short parliament, he advocated war against the Scots as a necessary measure of self-defence, and argued that in such an extremity money might be raised without a parliament. According to Vane's notes he added that the lower house were weary both of king and church (*Hist. MSS. Comm.* 3rd Rep. 3). In July he in vain attempted to persuade the city to lend, and the French ambassador to procure, the king a loan of 400,000*l.*; in the end he was obliged to raise money by a speculation in pepper (GARDINER, *History of England*, ix. 175, 190). He also prepared the Tower for a siege, having been appointed constable of that fortress (*ib.* 191). At the meeting of the Long parliament the parliamentary leaders resolved to call Cottington to an account (SANFORD, *Studies of the Great Rebellion*, 308). Seeing the danger, he resolved to efface himself and give up his offices. He was ready, in exchange for an assurance of indemnity, to surrender the chancellorship

of the exchequer to Pym, and the court of wards to Say. The 'sharp expressions' he had used in the council, made known during Strafford's trial by Vane's notes, added to his danger. In May 1641 he did actually surrender the court of wards to Say (17 May), and also the lieutenancy of Dorsetshire to Salisbury (10 May), but he retained the chancellorship of the exchequer till the appointment of Sir John Colepeper in January 1642. According to Clarendon, Strafford had recommended the king to send Cottington to succeed him in Ireland as deputy, 'but the winds were too high and too much against him then to venture thither' (*Rebellion*, App. M. 6).

Cottington was not one of the peers who joined the king at York at the beginning of the war. In a petition to the House of Lords he represents himself as ill with gout at Founthill, and appears as paying assessments to the parliament (*Lords' Journals*, v. 417). In 1643, however, he joined the king, and was one of the 'junto' set up by Charles in the autumn of that year (CLARENDON, *Life*, iii. 37). He also took part in the Oxford parliament, was appointed lord treasurer on 3 Oct. 1643 (BLACK, *Docquets of Letters Patent signed by Charles I at Oxford*, p. 80), and signed the capitulation of Oxford in July 1646. Being one of the persons excepted by the parliament from any indemnity or composition, he went abroad, and during the earlier part of his exile seems to have lived at Rouen. Thence the queen summoned him in May 1648 to attend Prince Charles, and after being taken by an Ostend pirate, and losing 1,000*l.* on the way, he at length reached the Hague (CLARENDON, *Rebellion*, xi. 23; *Life*, v. 11). After the king's execution a determined attempt was made by Lord Jermyn to exclude Cottington from the council of Charles II. It was not successful; but, nevertheless, in April 1649, on the suggestion of the prince, it was determined by the king that Cottington should go to Spain to endeavour to raise money, and Hyde resolved to accompany him (*Rebellion*, xii. 35; *Nicholas Papers*, Camd. Soc., p. 124). Their instructions are dated 24 May 1649 (*Calendar of Clarendon State Papers*, ii. 48). The ambassadors, who reached Spain in November 1649, were coldly received, slighted, and could effect nothing. The deliberations of the Spanish council on the question of their reception have been printed by Guizot (*Cromwell*, i. App. vi. x. xi.), and Clarendon has left a long account of their mission (*Rebellion*, bk. xiii.) Cottington's old influence had entirely vanished; 'he is more contemned and hated here than you can imagine,' writes Hyde; 'without question we might have done more in the king's business if it had not been for him, who yet will not understand that they are not his friends' (*Clarendon State Papers*, iii. 25). The destruction of the Spanish fleet in the Downs by the Dutch in 1639 was 'most unjustly laid to his want of kindness,' and another cause of the Spanish king's 'notable aversion from him was furnished by Cottington's apostasy from the catholic religion.' His religious history was indeed somewhat remarkable. Cornwallis records an attempt to convert him to catholicism in 1607 (*Winwood Papers*, ii. 321), but he did not actually become a catholic till 1623, during a dangerous illness which took place while he was at Madrid (*Narrative of the Spanish Marriage Treaty*, Camd. Soc., 249).

Returning to England he again adopted protestantism, but made a second declaration of catholicism during another illness in 1636 (GARDINER, *History of England*, viii. 140). Now resolving, as he wrote to the king on 1 March 1651, to remain in Spain, he determined again to become a catholic, and was after considerable difficulties reconciled by the papal nuncio (CLARENDON, *Rebellion*, xiii. 27; *Calendar of Clarendon State Papers*, ii. 97). He succeeded in obtaining license to remain at Valladolid, and a promise that his necessities should be supplied. The care of the English jesuits provided and made ready for him the house in that city where he had before resided during the reign of Philip III, and there he died, on 19 June, 1652, at the age of seventy-four. His body was brought to England in 1679, and interred in Westminster Abbey by his grand-nephew, Charles Cottington. His epitaph and an engraving of his monument are in Dart's 'Westmonasterium' (i. 181). Clarendon, who describes his character at length, terms him a very wise man, and praises above all his great self-command. One of his chief characteristics was his dry humour; 'under a grave countenance he covered the most of mirth, and caused more than any man of the most pleasant disposition.' 'His greatest fault was that he could dissemble,' a fault of which all who had any dealings with him continually complain. He raised by his industry an estate of about 4,000*l.* a year, and built himself at Hanworth and Founthill two of the finest houses in England (*Strafford Papers*, i. 51, ii. 118). Clarendon concludes by saying that 'he left behind him a greater esteem of his parts than love of his person.' With his death the barony of Cottington became extinct. He married in 1623 Sir Robert Brett's young widow, Anne, daughter of Sir William Meredith, sometime pay-

master of the forces in the Low Countries (*Court and Times of James I*, ii. 365). His children by her all predeceased him; two, a son and a daughter, died in 1631 during his embassy to Spain (*Court of Charles I*, ii. 65), while a second daughter died shortly after his return (*Strafford Papers*, i. 81). On 11 March 1634 Cottington wrote to Strafford announcing the death of his wife (*ib.* i. 214), who died 22 Feb. 1634, aged 33. From notices in the same papers it seems that he thought of marrying again, and Lady Stanhope and a daughter of the lord-keeper Coventry are mentioned, but he remained a widower (*ib.* ii. 47, 168, 246). His estates passed to Francis, son of his brother Maurice. A portrait, probably painted in Spain by a Spanish artist, is in the National Portrait Gallery.

[Clarendon's Life, Hist. of the Rebellion; Clarendon State Papers; Domestic State Papers; Strafford Correspondence; Gardiner's Hist. of England; Hoare's Modern Wiltshire, the Hundred of Dunworth; and the other authorities mentioned in the text.] C. H. F.

COTTISFORD, JOHN (*d.* 1540?), rector of Lincoln College, Oxford, was educated at Lincoln College, taking the degrees of B.A. in 1505, M.A. in 1510, and D.D. in 1525 (3 July). He served as proctor for 1515, and, on the resignation of Thomas Drax, was elected rector of his college (2 March 1518). This office he held for nearly twenty years. He was also 'commissary' or vice-chancellor of the university. He received this appointment from Archbishop Warham, the chancellor, on the death of Dr. Thomas Musgrave in the autumn of 1527, and took the oaths on 7 Dec. On Warham's death in August 1532 he resigned, and was succeeded by William Tresham, the nominee of John Longland, bishop of Lincoln, the newly elected chancellor. As commissary, Cottisford was engaged in the attempt to stop the introduction of heretical books into Oxford, and in the arrest of Thomas Garret, parson of Honey Lane, London, who was active in the distribution of such literature, and was subsequently burnt in Smithfield in company with Barnes and Jerome. A graphic account of the whole affair, and the dismay of Cottisford on hearing of Garret's escape from his prison by his friend Dalaber, is in Foxe's 'Martyrs' (v. 421). Both Foxe and Strype erroneously give 1526 instead of 1528 as the date of the occurrence.

In 1532 Henry VIII nominated him as one of the canons of the new college (now Christ Church) which he erected on the foundation laid by Cardinal Wolsey, but he continued to hold his rectorship of Lincoln College, in which capacity he signed an acknowledgment of the royal supremacy on 30 July 1534. This document is now in the Public Record Office. His connection with Lincoln College was terminated by his resignation on 7 Jan. 1538, and shortly after (13 Sept.) he was collated to the prebend of All Saints in Hungate, Lincoln, being installed on 5 Oct. His successor was collated in October 1542, so that Gutch's statement that he died in 1540 is, perhaps, not far wrong. The 'Mr. Cotisforde, preacher,' mentioned by Strype (*Cranmer*, p. 147) in the reign of Edward VI, must be a different person.

COTTLE, AMOS SIMON (1768?–1800), elder brother of Joseph Cottle [q. v.], was born in Gloucestershire about 1768. He received a classical education at Mr. Henderson's school at Hanham, near Bristol, and subsequently at Magdalene College, Cambridge, but did not take his B.A. degree until 1799. He died at his chambers in Clifford's Inn on 28 Sept. 1800. His principal work is 'Icelandic Poetry, or the Edda of Saemund, translated into English verse,' Bristol, 1797. It is not stated whether the translation is made from the original Icelandic or from a Latin version, most probably the latter. It is neither faithful nor vigorous, but displays considerable facility of versification. It is preceded by a critical introduction of no value, and a poetical address from Southey to the author, which contains the celebrated panegyric of Mary Wollstonecraft, 'who among women left no equal mind.' As she died on 10 Sept. 1797, and Cottle's preface is dated on 1 Nov., it must have been composed immediately after her death. Several minor poems of Cottle, including a panegyric on missionary enterprise and a Latin ode on the French conquest of Italy, are published along with his brother's 'Malvern Hills.'

[Gent. Mag. 1800; Joseph Cottle's Malvern Hills.] R. G.

COTTLE, JOSEPH (1770–1853), bookseller and author, born in 1770, was the brother of Amos Cottle [q. v.] He did not, like his brother, enjoy a classical education, but was for two years at the school of Mr. Richard Henderson, and received some instruction from his son John, who, though writing nothing, afterwards passed for a prodigy at Oxford. Henderson took great notice of Cottle, advised him to become a bookseller,

and so stimulated his love of reading that before he was twenty-one he had read more than a thousand volumes of the best English literature. He set up in business in 1791. In 1794 he made, through Robert Lovell, the acquaintance of Coleridge and Southey, then in Bristol and preparing for emigration to America [see COLERIDGE, SAMUEL TAYLOR]. Cottle, having himself a small volume of poems in the press, warmed towards the young poets, and surprised them by the liberality of his proposals. Coleridge had been offered in London six guineas for the copyright of his poems. Cottle offered thirty, and the same sum to Southey, further proposing to give the latter fifty guineas for his 'Joan of Arc,' which he would publish in quarto, allowing the author fifty copies for himself. He also assisted in making arrangements for the lectures delivered on behalf of pantisocracy. He facilitated Coleridge's marriage by the promise of a guinea and a half for every hundred lines of poetry he might produce after the completion of the volume already contracted for. This eventually appeared in April 1796. 'Joan of Arc' was published in the same year. Cottle next undertook the publication of Coleridge's periodical, 'The Watchman,' the expense of which was chiefly borne by him. He was shortly afterwards introduced by Coleridge to Wordsworth, and the acquaintance resulted in the publication of the two poets' 'Lyrical Ballads' in the autumn of 1798. In the following year Cottle retired from business as a bookseller. He certainly could not have made a fortune by publishing the works of the Lake poets, but his means must have been good, for he shortly afterwards produced several volumes of his own. 'Malvern Hills' was published in 1798, 'John the Baptist, a Poem,' in 1801, 'Alfred, an Epic Poem,' in the same year, 'The Fall of Cambria' in 1809, 'Messiah' in 1815. These pieces attracted sufficient attention to expose him to the sarcasm of Byron, whose lines would probably have been forgotten if Cottle had not pilloried himself in a more effectual manner. 'You are,' wrote Southey when he heard, in 1836, that Cottle was preparing his reminiscences, 'keeping up your habitual preparation for an enduring inheritance.' He certainly did succeed in immortalising himself as the most typical example of the moral and religious Philistine. His acquaintance with Coleridge, interrupted by the latter's departure from Somersetshire, had been resumed on two or three occasions; he had been the channel of conveying to him De Quincey's munificent gift of 300*l.*; and when in 1814 and 1815 Coleridge's fortunes had sunk to the lowest ebb by his indulgence in opium, Cottle had addressed to him some very well intended if not very judiciously worded remonstrances, which had extorted contrite and agonised replies. Writing a little later, in his 'Biographia Literaria,' Coleridge alludes to Cottle as 'a friend from whom I never received any advice that was not wise, or a remonstrance that was not gentle and affectionate.' In spite of the strongest remonstrances from Poole and Gillman, vanity and self-righteousness together induced Cottle, in his 'Early Recollections, chiefly relating to Samuel Taylor Coleridge' (1837), not only to enumerate all his own little generosities to Coleridge and Southey, but to enter into the painful details of Coleridge's opium infatuation, printing his own letters and the answers. The unworthiness of such conduct is even aggravated by an attempt to represent it as the fulfilment of an injunction of Coleridge's own, wrung from him by the extremity of mental and bodily anguish. Cottle erred from sheer obtuseness and want of moral delicacy, and hurt himself much more than Coleridge, whose failings would have become sufficiently known from other sources, while even Cottle's poems would have given a very inadequate idea of his stupidity without his memoirs. 'The confusion in Cottle's "Recollections" is greater than any one would think possible,' says Southey. It may be added that the book is very inaccurate in its dates, and that the documents quoted are seriously garbled. Reprehensible and in some parts absurd, it is, however, by no means dull, and besides its curious and valuable particulars of the early literary career of Coleridge and Southey, has notices of other interesting persons, otherwise little known, such as Robert Lovell and William Gilbert. It is embellished by youthful portraits of Coleridge, Southey, Wordsworth, and Charles Lamb. A second edition with some alterations and additions was published in 1847 under the title of 'Reminiscences of Coleridge and Southey.' Cottle died at Fairfield House, Bristol, 7 June 1853. The appendix to the fourth edition of his 'Malvern Hills' (1829) contains several prose essays by him, including an account of his tutor Henderson, a discussion of the authenticity of the Rowley poems, and a description of the Oreston Caves, near Plymouth, and the fossils found therein. His correspondence with Haslewood on the Rowley MSS. is preserved in the British Museum.

[Cottle's Recollections and appendix to Malvern Hills; Lives of Coleridge; Southey's Life and Correspondence; Warter's Selections from Southey's Letters.] R. G.

COTTON, BARTHOLOMEW DE (*d.* 1298 ?), historian, was a monk of Norwich, and probably a native of Cotton in Suffolk, but nothing is known of his life. His principal work bears the title of 'Historia Anglicana,' and is in three books. The first book is a literal transcript from Geoffrey of Monmouth. The second book, which contains the history of England from 449 to 1298, consists of three portions: the first, extending to the Norman conquest, is an unskilful compilation from Henry of Huntingdon; the second, a chronicle of 1066 to 1291, is a copy of a work by an unknown writer, which exists in manuscript at Norwich; and the third, from 1291 to 1298, appears to be original, and has considerable value for the period to which it refers. The Norwich chronicle which Cotton has inserted in his history is largely made up of extracts from writers whose works have been printed in their original form, but for 1264 to 1279 and 1285 to 1291 it is an independent authority of some importance, and it contains throughout many interesting notices of local history. The so-called third book is a separate work, entitled 'De Archiepiscopis et Episcopis Angliæ,' which is an abstract and continuation of William of Malmesbury's 'De Gestis Pontificum,' but furnishes much information which is not to be found elsewhere. An edition of the 'Historia Anglicana' (omitting the useless first book) was published in 1859 in the 'Rolls Series,' edited by the Rev. H. R. Luard, who has carefully indicated the sources from which the work is compiled, distinguishing the original portions by larger type. The only complete manuscript of the work known to exist is in the British Museum (book i. Reg. 14 C. 1, books ii. iii. Cotton, Nero C. v. 160–280). As the handwriting of the manuscript refers it to the beginning of the fourteenth century, and its colophon contains a prayer for the soul of the author, 'Bartholomew de Cotton, monk of Norwich,' it may be assumed that he died in or soon after 1298, the date at which his history ends. It is stated by Wharton that the Lambeth library in his time contained a manuscript of Cotton's 'History,' with a continuation to 1445, but this appears to have been lost. The only other known work of Bartholomew de Cotton is a sort of glossary with the title 'Optimæ Compilationes de libro Britonis secundum ordinem alphabeti, per Bartholomeum de Cottune compilatæ,' a manuscript of which is preserved in the library of Corpus Christi College, Cambridge.

[Cotton's Historia Anglicana, ed. Luard (Rolls Ser.), preface; Tanner's Bibl. Brit. p. 202; Wharton's Anglia Sacra, i. 397–402.] H. B.

COTTON, CHARLES (1630–1687), poet, friend of Izaak Walton, and translator of Montaigne's 'Essays,' born at Beresford in Staffordshire 28 April 1630, was the only child of the Charles Cotton whose brilliant abilities are extolled in Clarendon's 'Life' (i. 36, ed. 1827). His father inherited a competent fortune, and by his marriage with Olive, daughter of Sir John Stanhope of Elvaston in Derbyshire, became possessed of estates in Derbyshire and Staffordshire. In Herrick's 'Hesperides' there is a poem addressed to the elder Cotton, and Richard Brome dedicated to him (in 1639) Fletcher's 'Monsieur Thomas.' Among his friends were Ben Jonson, Donne, Selden, Sir Henry Wotton, Izaak Walton, and other famous writers. The younger Cotton was a pupil of Ralph Rawson of Brasenose College, Oxford, who was ejected from his fellowship by the parliamentary visitors in 1648. There is no evidence to show that Cotton received an academical training, but Cole in his 'Athenæ' (*Add. MS.* 5865, f. 47) claims him for Cambridge. His classical attainments were considerable, and he had a close knowledge of French and Italian literature. In early manhood he travelled in France and probably in Italy. He seems to have adopted no profession, but to have devoted himself from his youth upwards to literary pursuits. In 1649 he contributed an elegy on Henry, lord Hastings, to Richard Brome's 'Lachrymæ Musarum,' and in 1651 he prefixed some commendatory verses to Edmund Prestwich's translation of Seneca's 'Hippolytus.' No collection of Cotton's poems was published until after his death, but they had been passed among his friends in manuscript. Sir Aston Cokayne, who was constantly singing his praises, in some verses addressed 'To my most honoured cousin, Mr. Charles Cotton, upon his excellent poems,' speaks of his early poems in terms of most extravagant eulogy. Lovelace dedicated 'The Triumphs of Philamore and Amoret' to 'the noblest of our youth and best of friends, Charles Cotton, Esquire,' and hints not obscurely in the dedicatory verses that he was under pecuniary obligations to Cotton. Aubrey states (Wood, *Athenæ Oxon.*, ed. Bliss, iii. 462–3) that Lovelace was for many months a pensioner on Cotton's bounty. One of the elegies on Lovelace, printed at the end of 'Lucasta,' 1659, is by Cotton. He was an ardent royalist, and Waller's eulogy on Oliver Cromwell (written about 1654) provoked from him some bitterly satirical verses; but neither he nor his father appears to have suffered any persecution at the hands of the Commonwealth party. In the summer of 1656 he

married his cousin Isabella, daughter of Sir Thomas Hutchinson of Owthorpe in Nottinghamshire, and sister of Colonel Hutchinson. Before the marriage took place he and his father vested the manors of Bentley, Borrowashe, and Beresford, with other lands, in trustees, to sell off so much of the property as would pay a mortgage of 1,700*l.*, and to hold the rest in trust for the younger Cotton and his heirs. The elder Cotton, who had greatly injured his estate by lawsuits, died in 1658. At the Restoration, in 1660, Cotton published a panegyric in prose on Charles II; and in 1664 issued anonymously his burlesque poem 'Scarronides, or the First Book of Virgil Travestie,' which was reprinted (with a travesty of the fourth book) in 1670. Six editions of 'Scarronides' appeared during the author's lifetime; and it is noticeable that the later editions are more gross than the earlier. There is a tradition that a kinswoman of Cotton's, who had determined to leave him her fortune, took offence at a satirical allusion made in the poem to her ruff and revoked her intention. In 1665 Cotton was empowered by an act of parliament to sell part of his estates in order to pay his debts; and in the same year, for the diversion of his wife's sister, Miss Stanhope Hutchinson, he wrote a translation, which was published in 1671, of Corneille's 'Horace.' Another of Cotton's translations, 'The Moral Philosophy of the Stoics,' from the French of Du Vair, had appeared in 1667. From the dedication to his friend and kinsman, John Ferrers, dated 27 Feb. 1663–4, we learn that the translation had been undertaken some years previously at the instance of the elder Cotton. The posthumous collection of Alexander Brome's 'Poems,' 1668, contains an epistle by Brome to Cotton, and a reply, in which Cotton mournfully states that his only visitors were duns, whose approach drove him to take sanctuary in the neighbouring rocks. About 1670 he composed 'A Voyage to Ireland in Burlesque,' a spirited poem full of autobiographical interest. It was 'neither improvement nor profit' that induced him to take the journey, but having entered the army and received a captain's commission, he was ordered to proceed to Ireland. He expresses his regret at being obliged to abandon his favourite pursuit of angling. At Chester he was invited to supper by the mayor, and, being requested to give some account of his personal history, he informed his host,

That of land I had both sorts, some good and evil,
But that a great part on't was pawn'd to the devil;
That as for my parts, they were such as he saw;
That indeed I had a small smatt'ring of law,
Which I lately had got more by practice than reading,
By sitting o' th' bench whilst others were pleading.

It appears from another copy of verses ('Poems,' 1689, p. 199) that he narrowly escaped shipwreck on his voyage to Ireland. In an 'Epistle to Sir Clifford Clifton, then sitting in Parliament,' he states that he had 'grown something swab with drinking good ale' (for he frankly confesses that 'his delight is to toss the can merrily round'), and again refers to the fact that he was besieged by duns. In 1670 he published a translation of Gerard's 'History of the Life of the Duke of Espernon,' with a dedicatory epistle, dated from Beresford 30 Oct. 1669, to Archbishop Sheldon. He mentions in the preface that the translation had been begun about three years earlier, but that owing to a long and painful illness he had been obliged to desist from literary labour; and he hints that his former literary ventures had been financially unprofitable. Another translation from Cotton's pen, 'The Commentaries of De Montluc, Marshal of France,' was published in 1674, with a dedication to his relative the Earl of Chesterfield, and commendatory verses by Newcourt and Flatman. A curious and valuable anonymous work entitled 'The Complete Gamester,' which first appeared in 1674, and was frequently reprinted, has been attributed to Cotton. The second and third parts of 'The Compleat Gamester: in Three Parts . . . written for the Young Princesses, by Richard Seymour, Esq. The Fifth Edition,' 1734, are compiled from the earlier 'Complete Gamester,' and in the preface it is stated that 'The Second and Third Parts of this Treatise were originally written by Charles Cotton, Esq., some years since.' Another anonymous book published in 1674, 'The Fair One of Tunis, or the Generous Mistress,' which purports to be a translation from the French, is assigned to Cotton in the catalogue of Henry Brome's publications at the end of 'The Planter's Manual,' 1675. 'Burlesque upon Burlesque, or the Scoffer Scoft, being some of Lucian's Dialogues, newly put into English Fustian,' appeared anonymously in 1675, and was frequently reprinted. In the prologue the author states that the work was 'both begun and ended' in a month, and he promised to travesty the 'Dialogues of the Dead' if the public would give him encouragement; but the promise was not redeemed. Not only was Cotton an accomplished angler, but he was well skilled in horticulture. The taste which he showed

in planting his grounds at Beresford is commended by Cokayne; and his treatise, 'The Planter's Manual, being instructions for the raising, planting, and cultivating all sorts of Fruit-Trees, whether stone-fruits or pepin-fruits, with their natures and seasons,' first published in 1675, imparts practical information in a plain and easy style. He tells us that it was originally written 'for the private satisfaction of a very worthy gentleman, who is exceedingly curious in the choice of his fruits, and has great judgment in planting.' About 1670 Cotton lost his wife, who had borne him three sons and five daughters, and at some time before 1675 he married Mary, eldest daughter of Sir William Russell, bart., of Strensham in Worcestershire, and widow of Wingfield, fifth baron Cromwell, and second earl of Ardglass. His second wife had a jointure of 1,500*l.* per annum, but this accession of fortune did not relieve him from pecuniary embarrassment, for in 1675 he was again allowed by an act of parliament to sell part of his estates in order to pay his debts. To the fifth edition (1676) of Walton's 'Complete Angler,' Cotton contributed a treatise on fly-fishing as a 'Second Part.' Prefixed is an epistle, dated from Beresford 10 March 1675–6, 'To my most worthy father and friend, Mr. Izaak Walton the elder,' from which we learn that Cotton's treatise had been hurriedly written in ten days. At the end of the 'Second Part' Walton printed an epistle to Cotton, dated from London 29 April 1676, and Cotton's fine verses (written some years earlier) entitled 'The Retirement.' In the epistle Walton promised that, though he was in his eighty-third year and at a distance of more than a hundred miles, he would pay a visit to Beresford in the following month. Cotton was singularly devoted to his old friend, who had also been a friend of the elder Cotton. To the 1675 edition of Walton's 'Lives' Cotton prefixed a copy of commendatory verses, dated 17 Jan. 1672–3, in which he speaks of Walton as 'the best friend I now or ever knew;' and in the Second Part of the 'Complete Angler' he writes: 'I have the happiness to know his person, and to be intimately acquainted with him; and in him to know the worthiest man and to enjoy the best and the truest friend ever man had.' One of his most charming poems is an invitation (undated) to Walton to visit him at Beresford in the spring; and another poem addressed to Walton, 'The Contentation,' is equally attractive. In 1674 Cotton built his little fishing-house on the banks of the Dove, and set over the door a stone on which were inscribed his own initials and Walton's, 'twisted in cypher.' The room was wainscoted, and on the larger panels were paintings of angling subjects; in the right-hand corner was a buffet with folding doors, in which were portraits of Walton, Cotton, and a boy servant. In 1681 Cotton published a descriptive poem, 'The Wonders of the Peak,' written in imitation of Hobbes's 'De Mirabilibus Pecci.' It was dedicated to the Countess of Devonshire. The last work published in his lifetime was his translation of Montaigne's 'Essays,' 3 vols. 8vo, 1685, which he dedicated to George Savile, marquis of Halifax. Cotton's 'Montaigne' ranks among the acknowledged masterpieces of translation; it has been frequently reprinted. At the time of the publication of his 'Montaigne,' Cotton was undoubtedly living at Beresford. Plot, in his 'Natural History of Staffordshire,' which was licensed to be printed in April 1686, frequently mentions his 'most worthy friend, the worshipful Charles Cotton of Beresford, Esquire,' and speaks of 'his pleasant mansion at Beresford.' But in Blore's 'MS. Collections for a History of Staffordshire' it is stated that Cotton surrendered his Beresford property on 26 March 1681 to Joseph Woodhouse of Wollescote in Derbyshire, gentleman, who sold it in the same year to John Beresford, esq., of Newton Grange in that county. After publishing his translation of Montaigne's 'Essays,' Cotton proceeded to translate the 'Memoirs of the Sieur de Pontis,' but he did not live to finish the translation. In the burial register of St. James's, Piccadilly, is the entry, '1686–1687, Feb. 16, Charles Cotton, m.' (*Gent. Mag.* 1851, ii. 367). A contemporary manuscript diary (quoted by Oldys) records the fact that he died of a fever. Letters of administration of his effects were granted 12 Sept. 1687 to 'Elizabeth Bludworth, widow, his principal creditrix, the Honorable Mary, Countess-dowager of Ardglass, his widow, Beresford Cotton, esq., Olive Cotton, Katherine Cotton, Jane Cotton, and Mary Cotton, his natural and lawful children, first renouncing.' An unauthorised collection of Cotton's poems was published in 1689. From the publisher's preface to Cotton's translation of the 'Memoirs of the Sieur de Pontis,' 1694, it appears that Cotton had prepared a copy of his poems for the press, and that the publication of this authentic edition had been prevented by the 'ungenerous proceedings' of the piratical publisher.

Cotton was a man of brilliant and versatile genius. His 'Ode to Winter,' a favourite poem with Wordsworth and Lamb, is a triumph of jubilant and exuberant fancy; and the fresh-coloured, fragrant stanzas entitled 'The Retirement' are of rare beauty. 'There

are not a few of his poems,' says Coleridge (*Biographia Literaria*, ii. 96), 'replete with every excellence of thought, images, and passions which we expect or desire in the poetry of the milder muse; and yet so worded that the reader sees no one reason, either in the selection or the order of the words, why he might not have said the very same in an appropriate conversation, and cannot conceive how indeed he could have expressed such thoughts otherwise, without loss or injury to his meaning.' His prose-style is always easy and perspicuous, instinct with energy and life. Though his pecuniary difficulties, which were doubtless largely due to his own improvidence, caused him constant anxiety, his cheerfulness was unfailing. He was loyal to his friends, and generous to the poor; he loved good company and good liquor; he was an excellent angler, a devoted husband, and a man of unaffected piety. The portrait painted by his friend Lely shows him to have been handsome in person, with an engaging, frank countenance.

In addition to the works already mentioned, two anonymous pieces have been ascribed to Cotton: 1. 'The Valiant Knight, or the Legend of St. Peregrine,' 1663. 2. 'The Confinement. A Poem, with Annotations,' 1679. A copy of commendatory verses by Cotton is prefixed to Thomas Flatman's 'Poems and Songs,' 1674. Some letters of Cotton to Philip Kynder, who had projected a 'Natural History of Derbyshire,' are preserved among the Ashmolean MSS. The 1689 collection of Cotton's poems has not been reprinted, but selections are given by Chalmers and Sanford. In 1715 was printed 'The Genuine Works of Charles Cotton,' comprising 'Scarronides,' 'Lucian Burlesqued,' 'The Wonders of the Peak,' and 'The Planter's Manual;' it reached the sixth edition in 1771. The translation of Montaigne's 'Essays' has been frequently reprinted down to the present time.

[Memoir by W. O[ldys] prefixed to the Second Part of the Complete Angler, 1760; Langbaine's Dramatick Poets, with Oldys's manuscript annotations; Memoir by Sir Harris Nicolas; Hunter's MS. Chorus Vatum; Hazlitt's Bibliographical Collections; Cotton's Works.] A. H. B.

COTTON, Sir CHARLES (1753–1812), admiral, grandson of Sir John Hynde Cotton [q. v.], fourth baronet, of Madingley in Cambridgeshire, and third son of Sir John Hynde, fifth baronet, by Anne, daughter of Alderman Parsons of London, was educated at Westminster. When seventeen years old he became a member of Lincoln's Inn; went for a voyage to the East Indies in a merchant ship; and on his return entered the navy on board the Deal Castle on 24 Oct. 1772. After three years in the Deal Castle he was moved to the Niger, in which he went to North America, and on 29 April 1777 was made lieutenant by Lord Howe. On 3 April 1779 he was promoted to be commander, and on 10 Aug. of the same year was posted to the Boyne, which he brought home and paid off on 17 Nov. 1780. In April 1781 he was appointed to the Alarm, which was ordered to the West Indies, and was one of the repeating frigates in the memorable actions of 9 and 12 April 1782. At the peace the Alarm returned to England, and Cotton had no naval employment till, on 1 March 1793, he was appointed to the Majestic for service in the Channel fleet. In the action of 1 June 1794 the Majestic was next astern of the Royal George, flagship of Sir Alexander Hood, by whom he was personally thanked for his gallant support during the engagement. His name was nevertheless omitted from Howe's despatches, and the gold medal was consequently not awarded to him, an indignity which he shared with many of his brother officers [cf. Caldwell, Sir Benjamin; Collingwood, Cuthbert, Lord]. On 1 Oct. Cotton was moved into the Impregnable, and on 28 Nov. was appointed to the Mars of 74 guns. By the death of his father on 23 Jan. 1795, and the still earlier death of his elder brothers, he succeeded to the baronetcy, but was still commanding the Mars on 16 June 1795, when the squadron under the Hon. William Cornwallis [q. v.] fell in with the French fleet off the Penmarcks. In the retreat which won reputation and fame for Cornwallis, the Mars was for long the sternmost ship, and thus more exposed to the enemy's fire, from which she suffered much damage. On 20 Feb. 1797 Cotton was advanced to flag rank, and in March 1799 hoisted his flag in the Prince as third in command in the Channel fleet. In June, when the French fleet escaped from Brest, Cotton followed it to the Mediterranean, whence he returned off Brest in company with Lord Keith [see Elphinstone, George Keith, Lord Keith]. On 29 April 1802 he was advanced to the rank of vice-admiral, and on the renewal of the war was again appointed to a command in the Channel fleet, in the first instance under Cornwallis, and afterwards under St. Vincent. In 1807 he was appointed commander-in-chief in the Tagus, in which capacity he strongly remonstrated against the convention of Cintra, 22 Aug. 1808, and positively refused to accept it so far as related to the stipulation in favour of the Russian fleet then lying in the Tagus, by which they were to have the option of remaining or returning to Russia

without being pursued for a specified time. A special convention was therefore made between Cotton and the Russian admiral, by which the ships were delivered to Cotton, to be restored within six months after the conclusion of peace. Cotton returned to England in December 1808, in which year he was made full admiral, and in March 1810 was appointed to command in the Mediterranean in succession to Lord Collingwood. In May 1811 he was recalled to take command of the Channel fleet in succession to Lord Gambier, and was at Plymouth when, on 23 Feb. 1812, he died suddenly of apoplexy.

He married in 1798 Philadelphia, daughter of Admiral Sir Joshua Rowley, bart., by whom he had two daughters and two sons, the elder of whom was St. Vincent [q. v.]

[Naval Chronicle (with a portrait), xxvii. 354; Ralfe's Nav. Biog. ii. 215.] J. K. L.

COTTON, GEORGE EDWARD LYNCH, D.D. (1813–1866), bishop of Calcutta, was son of Captain Thomas Davenant Cotton of the 7th fusiliers, who was killed at the battle of Nivelle a fortnight before the birth of his son. His grandfather, the dean of Chester, was the second son of Sir Lynch Salusbury Cotton, bart., of Combermere Abbey, an uncle of Sir Stapleton Cotton, the first Viscount Combermere [q. v.] George Cotton was educated at Westminster and at Trinity College, Cambridge, where in 1836 he took a first class in the classical tripos, coming out eighth on the list. In the following year he was appointed by Dr. Arnold an assistant-master at Rugby School, with the charge of a boarding-house. Both at school and at the university he was remarkable for force of character, accompanied by a quaint and grotesque humour, was very industrious and methodical in his work, and was earnestly religious. At Cambridge his most intimate friends were W. J. Conybeare [q. v.] and C. J. Vaughan, the present (1887) dean of Llandaff. His religious views at that time were of the evangelical school, but at Rugby he speedily came under the influence of Arnold, and in the words of his biographer 'thoroughly absorbed and reproduced in his own life and work the most distinctive features of Arnold's character and principles.' He was 'the young master' of 'Tom Brown's School Days.' He remained at Rugby for fifteen years, gradually developing into a singularly efficient master, and devoting himself to the moral, as well as the intellectual, training of his pupils. In 1852, having previously failed in a candidature for the head-mastership of Rugby on the retirement of Dr. Tait, he was appointed master of Marlborough College, which, established only nine years before, had been very unfortunate in its management, and stood urgently in need of reform. Cotton's mastership was the turning-point in the history of the college. By firmness, method, and untiring industry he restored the finances, improved the teaching, gained an almost unexampled influence over masters and boys, raised the whole tone of the school, and at the end of six years left it in possession of the high place among the public schools of England which it still maintains. His retirement from Marlborough was caused by his appointment as bishop of Calcutta, made on the recommendation of Dr. Tait, whose colleague he had been at Rugby, and with whom he had afterwards been connected in the capacity of examining chaplain. On his leaving Marlborough the governing body of the college paid him the rare compliment of allowing him to name one of the closest of his Rugby friends as his successor.

Cotton was consecrated bishop of Calcutta on 13 May 1858, his friend Dr. Vaughan preaching his consecration sermon. At Madras, the first Indian port at which he landed, the day of his arrival (8 Nov. 1858) happened to be the day of the public reading of the royal proclamation issued on the occasion of the queen's assumption of the direct government of India. Although the rebellion had been practically suppressed, men's minds were full of questions of various kinds—among them that of the attitude to be maintained by the government of India in regard to christian missions and the education of the natives. By some persons it was alleged that the extension of education in India and the encouragement which had been given to christian missionary work by grants in aid of mission schools under the education despatch of 1854 had had much to do with the discontent which resulted in the mutiny. By others it was contended that too little had been done in recognition of christianity, and that the compulsory use of the Bible in government colleges and schools ought no longer to be delayed. At such a time an indiscreet or impulsive metropolitan might have added very seriously to the difficult task which the government had before them. But Cotton was an eminently practical man, well able to see both sides of a complicated question. While rendering most valuable help to the missionary cause and promoting other measures of great importance in their bearing upon religion and education in India, he speedily acquired an influence in the administrative and official circles of Indian life which had not been possessed by any of his predecessors. The work which will always be most closely associated with his

name is the establishment of schools on the hills of India for the education of the children of Anglo-Indians belonging to those classes who cannot afford the expense of sending their children to England for their education, and also of Eurasians. At a very early period in his episcopate Cotton was struck by the insufficiency of the means of education for the children of these two classes, and by the danger of leaving large numbers of them uneducated while education was advancing among the natives with rapid strides. 'He saw that if there could be one thing fatal to the spread of christianity it was the sight of a generation of unchristian, uncared-for Englishmen springing up in the midst of a heathen population. He felt that if there could be one thing subversive of our Indian empire it was the spectacle of a generation of natives, highly educated and trained in missionary and government schools, side by side with an increasing population of ignorant and degraded Europeans' (*Macmillan's Magazine*, December 1866). The scheme by which Cotton sought to avert this danger was the immediate establishment on the hills of a school or schools imparting an education physically and intellectually vigorous, suited to the requirements of commercial life or the army or the Calcutta University, with religious teaching in conformity with the church of England, modified by a conscience clause for dissenters, and the eventual establishment in the great towns in the plains of cheaper schools on the plan of day schools for those whose means did not admit of their sending their children to boarding schools on the hills. Cotton's proposals were warmly supported by the governor-general, Lord Canning, who, discerning their importance from a political point of view, gave liberal aid to the scheme from the public funds. The schools, called by Bishop Cotton's name at Simla, Bangalore, and other places, are monuments of this part of his work.

While thus striving to meet the educational requirements of his poorer countrymen and of the Eurasians, and while devoting much attention to the duty of placing the government establishment of chaplains upon an efficient footing and supplementing it by additional clergymen, maintained partly by private contributions and partly by grants from the state, Cotton did not neglect missionary work. In the course of his extensive visitation tours, ranging from Peshawur, Cashmere, and Assam to Cape Comorin, and including Burma and Ceylon, he visited a considerable number of mission stations, examining the schools and conferring with the missionaries on matters connected with their duties. He also carried on a regular correspondence with the heads of the missionary societies in England. On the subject of native education he came to the conclusion, before he had been many years in India, that the object to be aimed at was the gradual abolition of the government colleges and a great enlargement of the grant-in-aid system, 'instead of the impracticable scheme of introducing the Bible into all the existing government schools.'

Although thoroughly liberal in his views on ecclesiastical questions, Cotton could hardly be called a broad churchman in the ordinary acceptation of that term. He never forgot that he was a bishop of the church of England, and that it was his duty not 'to lose sight of the chief peculiarities and distinctive merits of the English church in pursuit of an unpractical pretence at unity.' Thus, while he was ready to meet the dissenters on common ground and to surrender all exclusive and offensive church privileges, such as the sole validity of marriages by episcopal clergy, and to meet them as far as possible in concessions such as the loan of the English churches to Scotch regiments in cases of absolute necessity, he was not prepared to make churches or burial-grounds common; and when it was proposed that the English church at Simla should be made available for a Scotch service for the few presbyterians at the station, he resisted the proposal as being uncalled for and certain to disgust the English clergy and the high-church laity, remarking that in all such matters every concession comes from the church side and none from the dissenters, and that if he became more and more of a high churchman he should be made one by captious and perverse agitations.

The great extent of the Calcutta diocese and the need of additional bishops for the Punjab and Burma—a need which has been since supplied—was much felt by Cotton. Another ecclesiastical reform which, though originating from Madras, received his cordial support, and was in fact developed at his instance on one point of considerable importance—the limitation of the period of service of the government chaplains to twenty-five years—was an increase of the pensions of the chaplains who were thus compelled and enabled to retire before being incapacitated for duty.

In the midst of his useful and varied labours Cotton lost his life by an accident. On 6 Oct. 1866, when returning in the dusk on board a steamer from which he had landed to consecrate a cemetery at Kushtiâ on the Ganges, his foot slipped on a platform of rough planks which he was crossing; he fell into the river and, being carried away

by the strong undercurrent, was never seen again.

On receiving the intelligence of the bishop's death the government of India published the following order in council: 'The right honourable the governor-general in council has learnt with the deepest sorrow the death, through a calamitous accident, of the Right Reverend George Edward Lynch Cotton, lord bishop of Calcutta. There is scarcely a member of the entire christian community throughout India who will not feel the premature loss of this prelate as a personal affliction. It has rarely been given to any body of christians in any country to witness such depth of learning and variety of accomplishments combined with piety so earnest and energy so untiring. His excellency in council does not hesitate to add the expression of his belief that large numbers, even among those of her majesty's subjects in India who did not share the faith of the Bishop of Calcutta, had learned to appreciate his great knowledge, his sincerity, and his charity, and will join in lamenting his death.'

Cotton married in 1845 his cousin, Sophia Anne, eldest daughter of the late Rev. Henry Tomkinson of Reaseheath in Cheshire. His widow wrote his life. He left one son, now Captain Edward T. D. Cotton, M.P., and one daughter.

[Memoir of George Edward Lynch Cotton, D.D., bishop of Calcutta and metropolitan, with selections from his journals and correspondence, edited by Mrs. Cotton, London, 1871; Ann. Reg. 1866.] A. J. A.

COTTON, HENRY (1789–1879), divine, was a native of Buckinghamshire. He was born in 1789, and, having been for four years at Westminster School (into which he was admitted in 1803), entered Christ Church, Oxford, where he obtained in 1810 a first class in classics, and became Greek reader. There he graduated B.A. in the following year, and M.A. in 1813. While at Christ Church he attracted the notice of the dean, Cyril Jackson, to whose memory his work on the various editions of the Bible is dedicated, and it was probably through the dean's influence that he was appointed in 1814 sub-librarian of the Bodleian. This post he resigned in 1822, having two years before received from his university the degree of D.C.L., and having been admitted into holy orders. He was likewise a student of Christ Church. In 1823 he removed to Ireland as domestic chaplain to the learned Dr. Laurence, shortly before promoted to the archbishopric of Cashel, who was also an Oxford man, and father-in-law of Cotton. In June 1824 the archdeaconry of Cashel was conferred upon him; in 1828 the union of Thurles; he was appointed likewise in 1832 to the treasurership of Christ Church Cathedral, Dublin; and in 1834, the temporalities of the deanery of Lismore having been transferred to the ecclesiastical commissioners for Ireland, under the provisions of the act 4 and 5 William IV, c. 90, the cathedral chapter elected him to the honourable, but unremunerative, dignity of dean of Lismore. Failing eyesight induced him to retire from the active duties of the ministry, and he gave up the deanery of Lismore in 1849. In 1872 he became almost totally blind, and then felt bound to resign all his other ecclesiastical preferments, having held an exemplary position as a scholar, an author, and a minister of religion. He died at his residence in Lismore 3 Dec. 1879, and was buried in the graveyard of Lismore Cathedral.

Cotton's works (not including occasional sermons and articles in periodicals) are: 1. 'Dr. Wotton's Thoughts on a proper Method of studying Divinity, with Notes,' &c., Oxford, 1818. 2. 'A List of Editions of the Bible in English from 1505 to 1820, with Specimens of Translations,' &c., Oxford, 1821 (second edition, corrected and enlarged, 1852). 3. 'A Typographical Gazetteer attempted,' Oxford, 1824 (second edition, corrected and enlarged, 1831; and a second series, especially rich in details of the foundation of newspapers in the United States, and of missionary publications in our colonies, Oxford, 1866). 4. 'Memoir of a French New Testament, with Bishop Kidder's Reflections on the same,' London, 1827 (second edition 1863). 5. 'A Short Explanation of Obsolete Words in our Version of the Bible,' Oxford, 1832. 6. 'Five Books of Maccabees in English, with Notes and Illustrations,' Oxford, 1832. 7. 'Cui Bono? A Letter to the Right Hon. E. G. Stanley,' Dublin, 1833. 8. 'Fiat Justitia, a Letter to Sir H. Hardinge on the Present State of the Church in Ireland,' Dublin, 1835. 9. 'Fasti Ecclesiæ Hibernicæ,' 6 vols., Dublin, 1851–78. 10. 'Rhemes and Doway: an Attempt to show what has been done by Roman Catholics for the diffusion of the Holy Scriptures in English,' Oxford, 1855. 11. 'The Four Gospels and the Acts of the Apostles, with short Notes for the use of schools and young persons,' Oxford, 1857. On the death of Archbishop Laurence in 1838 Cotton superintended the publication of Laurence's reproduction of the first 'Visitation of the Saxon Reformed Church in 1527 and 1528,' and he likewise reissued the privately printed poetical pieces of Archbishop Laurence and his brother, French Laurence, the friend of

Fox and Burke; but the volume, 'through the unfortunate blindness of the editor,' was very incorrectly printed. In the prefaces to his varied publications he feelingly refers to his residence in remote country parts of the south of Ireland. All his writings, however, are highly creditable to his scholarship, while his 'Fasti Ecclesiæ Hibernicæ' (6 vols. 1851–1878) is a standing monument of the most patient industry. It has done for the Irish church what Hardy's 'Le Neve' has done for the English; in fact, it excels its English rival in supplying skeleton biographies of all the bishops and the more distinguished members of the cathedral bodies.

[Cotton's Fasti Ecclesiæ Hibernicæ; Men of the Time (ed. 1865), p. 207; Annual Register (1879), p. 233; Academy, 13 Dec. 1879; Irish Ecclesiastical Gazette, 3 Jan. 1880.] B. H. B.

COTTON, JOHN (12th cent.?), is the author of a valuable treatise on music, first printed by Gerbert in 1784. Of this work there are two manuscripts at Vienna, and one each at Leipzig, Paris, Rome, and Antwerp. A sixth, from which Gerbert printed his edition, was destroyed in the fire at St. Blasien in 1768. The Vatican copy is said by Fétis to contain much the best text. The exact date of the treatise is unknown. The Vienna and St. Blasien copies entitle it merely 'Joannis Musica,' while the Paris and Antwerp copies have the name of Cotton or Cottonius. The anonymous monk of Melk who wrote the work (*De Script. Eccles.*) quoted by Gerbert, says that there was a learned English musician known as Joannes, and the English origin of the work is rendered more probable by the author's dedicating it 'Domino et patri suo venerabili Anglorum antistiti Fulgentio,' though the latter, like Cotton, cannot be identified. One theory attributes the work to Pope John XXII (1410–1417), but this rests on the very slight foundation that the author styles himself 'Joannes servus servorum Dei.' Gerbert has pointed out that this title was not solely used by popes, besides which it is improbable that a supreme pontiff would address Fulgentius in the deferential manner adopted by the author. The work is also clearly of earlier date, for it speaks of neums being in ordinary use at the time of writing. Another theory ascribes it to a certain Joannes Scolasticus, a monk of the monastery of St. Matthias at Trèves, all that is known of whom is that he was living about 1047, and that he wrote much music, but there seems to be no reason why the work should not have been written by the unknown Englishman, John Cotton. From internal evidence its date appears to be the latter part of the eleventh or beginning of the twelfth century. On the system of harmony of the period the whole work throws much light.

[Gerbert's Scriptores Ecclesiastici de Musica Sacra, 1784, tom. ii.; A. de la Fage's Essais de Diptérographie Musicale, 1864; Coussemaker's Histoire de l'Harmonie au Moyen Age, 1852; Fétis's Biographie des Musiciens, vol. ii.; Ambros's Geschichte der Musik, ii. 192.] W. B. S.

COTTON, SIR JOHN HYNDE (*d.* 1752), Jacobite politician, was the only surviving son of Sir John Cotton of Lanwade and Madingley Hall, Cambridgeshire, whose grandfather (John) was created a baronet 14 July 1641. His mother, who married Sir John at Westminster Abbey, on 14 Jan. 1679, was Elizabeth, daughter and coheiress of Sir Joseph Sheldon, lord mayor of London in 1676, and nephew and heir of Archbishop Sheldon. He was entered as a fellow-commoner at Emmanuel College, Cambridge, on 29 Sept. 1701, was created M.A. in 1705, and became fourth baronet on his father's death in 1712. At every election from 1708 to 1734 he was returned for the borough of Cambridge; but during the parliament of 1722–7 he chose to serve for the county of Cambridge, which had also returned him as its representative. Cole says that Cotton was accused of stinginess by the corporation of Cambridge; and if, as is asserted, his election in 1727 cost him 8,000*l.*, his subsequent expenditure may of necessity have subjected him to this charge. At all events, his parliamentary connection with his native county closed in 1741, when he was returned for the borough of Marlborough, and continued to sit for it until his death. Cotton was always a tory, and after the death of Queen Anne was one of the leaders of the Jacobite party. For two years (July 1712 to September 1714) he was member of the council of trade; but his tenure of office ceased with the queen's death, and his principles forbade his accepting any position under the new government until the fall of Sir Robert Walpole. On that event the Duke of Argyll, one of the most influential in opposition to Walpole, received an assurance that Cotton should be included in the board of admiralty. But the appointment was absolutely vetoed by George II, with the declaration that he was determined to stand by those who had secured the throne of England for his family; and, to the indignation of the tories, Cotton's name did not appear in the list of the board's members. The king was at last forced to yield, and, although he disliked the Jacobite leader personally as well as politically, was compelled to accept him in 1744 in the post of treasurer

of the chamber, an office which conferred upon its holder rooms adjoining the palace, and the supervision of the accounts of the king's tradesmen. Cotton was very tall and very stout, and the caricatures of the day represented the ministers thrusting him down the king's throat. The office of treasurer he held until 1746, during which period he never voted with the court. In 1746 he was dismissed, and shortly afterwards led the remnant of his Jacobite friends to the standard of the Prince of Wales, in opposition to the ministry of the day. He died, at Park Place, St. James's, London, on 4 Jan. 1752, and was buried at Lanwade, in a vault made by himself, between his two wives. The first of these was Lettice, second daughter of Sir Ambrose Crowley, who brought him 10,000*l.* She died in August 1718, leaving one son, Sir John Hynde, father of Sir Charles Cotton [q.v.], and one daughter. His second wife was Margaret, daughter of James Craggs the elder [q. v.], and widow of Samuel Trefusis of Trefusis in Cornwall, and through her Cotton obtained a third of the property of her father and brother. She died on 23 Aug. 1734, having had issue one daughter, who died very young. Cotton possessed great 'wit, and the faithful attendant of wit, ill-nature,' and was famed for his knowledge of the arts of the House of Commons; but his speeches were usually marked by brevity, as he was subject to 'great hesitation and stammering in his speech,' defects which, like many other stammerers, he knew how to turn to his advantage. Triennial parliaments and some other measures afterwards identified with radicalism were advocated by him; but his support of these views arose from the fact that they were disliked by the whigs rather than from a belief in their justice. He took pleasure in antiquarianism, numbering Gough and Zachary Grey among his correspondents; and when Carte went to Cambridge to collect materials for his history, he dwelt at Madingley, and made great use of the family collection of pamphlets published between 1640 and 1660. Good living was also among his pleasures. It was an age of hard drinking; but Cotton was credited with the power of consuming as much wine as any man in England.

[Lord Stanhope's History of England, 1713–1783, iii. 114, 187, 330; Walpole's Last Ten Years of George II, i. 28–9, 185; Coxe's Pelham Administration, ii. 50; Sir C. H. Williams's Works (1822), ii. 98, 115, 178; Betham's Baronetage, i. 404–5; Cooper's Annals of Camb. iv. 83–4, 109, 126, 168–9, 195; Gent. Mag. (1752), p. 92; Chester's Registers of Westminster Abbey, p. 16; Nichols's Illustr. of Lit. iv. 717, v. 153, 159, 161; Nichols's Lit. Anecd. ii. 479, 481, 534; Cole's MSS., Addit. MS., Brit. Mus. 5841, pp. 335–43; Le Neve's Knights (Harl. Soc. 1873), 208, 495.] W. P. C.

COTTON, JOSEPH (1745–1825), mariner and merchant, the second surviving son of Dr. Nathaniel Cotton [q. v.], was born at St. Albans on 7 March 1745–6, and entered the royal navy in 1760. After passing the examination for lieutenant he left the navy and was appointed fourth mate in the marine service of the East India Company. After two voyages in command of the Queen Charlotte, East Indiaman, he retired on the fortune thus acquired, and lived for the rest of his life at Leyton in Essex. In 1788 Captain Joseph Cotton was elected an elder brother of the Trinity, and in 1803 deputy-master, which office he held for about twenty years. In 1803 the Trinity House raised a corps of volunteer artillery 1,200 strong, of which Pitt (as master) was colonel and Captain Cotton lieutenant-colonel, to safeguard the mouth of the Thames against a foreign fleet. A picture of the naval review held on this occasion is preserved at the Trinity House, and has been engraved. Captain Cotton compiled a 'Memoir on the Origin and Incorporation of the Trinity House of Deptford Strond' (1818), published without his name on the title-page, though it is appended to the dedication to Lord Liverpool. Shortly before this time the administration of the Trinity House had been the subject of parliamentary inquiry, and the special object of this work is to explain the public duties of the corporation and to defend the management of its large revenues. Incidentally the book gives much curious information about the lighting of the English coast at that time and formerly. Captain Cotton was a director of the East India Company from 1795 to 1823; he was also a director of the East India Docks Company (chairman in 1803), and a governor of the London Assurance Corporation. In 1814 the Society for the Encouragement of Arts and Manufactures awarded to him a silver medal for the introduction into the country of rhea, or China grass, an Eastern fibre of extraordinary strength and fineness, which to this day has not been profitably utilised in manufacture. He was a fellow of the Royal Society. Portraits of him and his wife were painted by Sir Thomas Lawrence, and engraved in mezzotint by C. Turner. The pictures are now in the possession of his grandson, Lord-justice Cotton. A marble bust of him by Chantrey is preserved at the Trinity House. He died at Leyton on 26 Jan. 1825, and is buried, with his wife and many others

of his family, in a vault in the churchyard of the parish church. His son William is separately noticed

[Personal information; Gent. Mag. 1825, i. 189.] J. S. C.

COTTON, NATHANIEL (1705–1788), poet and physician, was born in London in 1705, the youngest son of Samuel Cotton, a Levant merchant. His biographer in the 'Gentleman's Magazine' (from which all other accounts are taken) describes him as ἀγενεαλογητός. He never put his name to his own published writings; his tombstone gives neither date nor description; and his son, when editing his collected works, gives no life of the author. There is reason to believe that the family came from Northamptonshire, where Cotton or Coton is a not uncommon place name. A Nathaniel Cotton was rector of Everdon in that county from 1646 to 1683. Of the poet himself we only know that he studied medicine under Boerhaave at Leyden, where his name appears in Peacock's 'List of English Students at Leyden' under the date 23 Sept. 1729. He settled at St. Albans as a physician about the year 1740, and remained there until his death. Besides his general practice he kept a private madhouse, which he dignified with the title of 'Collegium Insanorum.' It was at this madhouse that the poet Cowper was confined during his first period of insanity, from December 1763 to June 1765; and perhaps, now that his own poems are forgotten, this association with a greater poet is Dr. Cotton's chief claim to distinction. For Cowper thus writes of him: 'I was not only treated with kindness by him while I was ill, and attended with the utmost diligence; but when my reason was restored to me, and I had so much need of a religious friend to converse with, to whom I could open my mind upon the subject without reserve, I could hardly have found a fitter person for the purpose. The doctor was as ready to administer relief to me in this article likewise, and as well qualified to do it, as in that which was more immediately his province.' And again: 'He is truly a philosopher, according to my judgment of his character, every tittle of his knowledge in natural subjects being connected in his mind with the firm belief of an omnipotent agent.' Dr. Cotton was also the friend of another poet, Dr. Edward Young, whom he attended in his last illness, and of whose deathbed he has left an interesting account.

In his own day Dr. Cotton was himself a popular poet. He contributed to Dodsley's 'Collection.' His best known volume of poems, 'Visions in Verse, for the Entertainment and Instruction of Younger Minds,' was published anonymously in 1751; and a seventh edition, revised and enlarged, appeared in 1767. After his death his eldest surviving son, the Rev. Nathaniel Cotton, rector of Thurnby in Northamptonshire, brought out a collected edition of his works in two volumes, entitled 'Various Pieces in Prose and Verse, many of which were never before published' (1791). This book is dedicated to the Dowager Countess Spencer, 'the author being well known to her ladyship for many years.' For some time afterwards Dr. Cotton's poems were included in most collections of English poets; and two of his shorter pieces, 'The Fireside' and 'To a Child of Five Years Old,' may yet be found in anthologies. It must be confessed that Dr. Cotton was emphatically a poet of his century—cultivated, didactic, and pious. His 'Visions in Verse' are an attempt, both in metre and subject, to moralise for children the fables of Gay. His 'Fables' are less overweighted with allegory, and some of his occasional verses still preserve their power to please. The second volume of the collected works consists entirely of prose. They comprise five sermons in regular form, besides several essays on the duties of life, scarcely to be distinguished from sermons, some allegorical stories, and sixty pages of extracts from letters. These last show the writer in an agreeable light, as the adviser and consoler of his correspondents, and by no means without cheerfulness and humour.

Dr. Cotton was twice married, and left a numerous family, including Joseph Cotton, who is separately noticed. He died at St. Albans on 2 Aug. 1788, and he lies buried in the churchyard of St. Peter's, beneath an altar tombstone which bears the plain inscription, 'Here are deposited the remains of Anne, Hannah, and Nathaniel Cotton.' He is credited with one publication on a professional subject, 'Observations on a particular kind of Scarlet Fever that lately prevailed in and about St. Albans' (1749).

[Gent. Mag. lviii. 756, lxxvii. 500–1; personal information.] J. S. C.

COTTON, RICHARD LYNCH, D.D. (1794–1880), provost of Worcester College, Oxford, third son of Henry Calveley Cotton, was born 14 Aug. 1794, at Woodcote in Oxfordshire. He was educated at Charterhouse and at Worcester College, where he graduated B.A. 1815, M.A. 1818, and D.D. 1839. In 1823 he received the small college living (which he held for sixteen years) of Denchworth, near Wantage, and in 1839 he was appointed provost of Worcester College. From

1852 to 1856 he was vice-chancellor of the university, and it was during his term of office that the first university commission—whose inquiries he merely acknowledged but did not answer—substantially changed the old Oxford into the new. Cotton published in 1837 'The Way of Salvation plainly and practically traced,' and in 1849 'Lectures on the Holy Sacrament.' He also printed some funeral sermons. He married (1839) Charlotte Bouverie, a sister of Dr. Pusey, and left one daughter. All who knew him loved and respected him, for his kindness was unfailing and his piety sincere. He died 8 Dec. 1880. His ten brothers [see COTTON, SIR SYDNEY JOHN] gained high distinction in the army, the navy, and the church.

[Obituary notice by J. W. B[urgon] in the Guardian, 29 Dec. 1880.] A. H. B.

COTTON, ROBERT (*fl.* 1300), Franciscan. [See COWTON.]

COTTON, SIR ROBERT BRUCE (1571–1631), antiquary, was eldest son of Thomas Cotton of Connington, Huntingdonshire (M.P. for Huntingdonshire in 1557), by his first wife, Elizabeth, daughter of Francis Shirley of Staunton-Harold, Leicestershire. Thomas Cotton was a rich country gentleman, descended from a family of well-ascertained antiquity, originally settled in Cheshire. In the fourteenth century William, son of Edmund Cotton or de Cotun, acquired by marriage the extensive Ridware estates in Staffordshire, which descended to the eldest branch. In the fifteenth century a younger son of this branch, William, was slain at the second battle of St. Albans in 1461, and lies buried in St. Margaret's Church, Westminster. He married a wealthy heiress, Mary, daughter of Robert de Wesenham, and from this marriage the antiquary was directly descended. Mary de Wesenham was granddaughter and ultimate heiress of Sir John de Bruis or Bruce, who claimed descent from the Scottish kings and owned the manors of Connington, Huntingdonshire, and Exton, Rutlandshire. Sir Robert always insisted with pride on his ancestral connection with the royal line of Scotland, and added his second name of Bruce to keep it in memory. Mary de Wesenham married a second and a third husband, Sir Thomas Billing [q. v.] and Thomas Lacy, and died in 1499, but was buried at St. Margaret's with her first husband, and bequeathed the estates of Connington, Huntingdonshire, and Exton, Rutlandshire, to Thomas Cotton, her eldest son by him. In 1500, 1513, and in 1547, the antiquary's immediate ancestors, all named Thomas Cotton, were high sheriffs of Huntingdonshire and Cambridgeshire.

Sir Robert was born at Denton, three miles from the family seat at Connington, on 22 Jan. 1570–1, and was baptised five days later. Soon after their marriage his parents had removed to a small house at Denton, which was pulled down early in this century, in order 'to be more at liberty from the incommodiousness of their own seat arising from a great accession of new domestics' (COLLINS, *Baronetage*, 1720, p. 187; *Notes and Queries*, 3rd ser. vi. 449–51). A younger son, Thomas, born a year later, was always on most affectionate terms with the antiquary. His sisters were named Lucy, Dorothy, and Johanna. The mother died while her children were young, and the father married as his second wife Dorothy, daughter of John Tamworth, of Hawsted, Leicestershire, by whom he had six other children—three sons, Henry (*d.* 1614), Ferdinand, and John; and three daughters, Catherine, Frances, and Rebecca.

Robert, the eldest child, was sent at an early age to Westminster school, where William Camden [q. v.] was second master, and under his influence Cotton doubtless first acquired his antiquarian tastes. On 22 Nov. 1581 he matriculated at Jesus College, Cambridge, and proceeded B.A. in 1585. Former accounts represent Cotton to have taken his degree at Trinity College, Cambridge, in 1575, when his age could not have exceeded four years! A student named Robert Cotton undoubtedly graduated at Trinity in that year, but it is obvious that the entry in Jesus College register can alone refer to the antiquary (R. SINKER in *Notes and Queries*, 6th ser. vi. 533). Subsequently Cotton settled in a house in Westminster, near Old Palace Yard, with a garden leading to the river. Part of the House of Lords now occupies its site (J. T. SMITH, *Antiquities of Westminster*). Cotton's passion as a collector of manuscripts, coins, and all other kinds of antiquities, soon manifested itself here. With conspicuous success he engaged in this pursuit throughout his life, and the library of Cotton House became the meeting-place of all the scholars of the country. When about twenty-two years old he married Elizabeth, daughter and coheiress of William Brocas of Thedingworth, Leicestershire. His eldest child, Thomas, was born in 1594.

Cotton was M.P. for Newtown in 1601, but took small part in public affairs. He joined about 1590 the Antiquarian Society (founded 1572), which met for learned discussion. There he renewed his intimacy with Camden, and made the acquaintance of Sel-

den, Sir John Davies, Speed, Richard Carew of Antony, and other men of learning. The meetings of the society were held at Cotton's house at the end of Elizabeth's reign, and many proofs are extant of his liberal treatment of his antiquarian guests. Dr. Dee enjoyed good cheer there in 1596; Sir John Davies, who writes to him as 'Sweet Robin,' sent him a present of sweetmeats in 1602, and arranged for a joint visit to Cambridge (Wright, *Queen Elizabeth*, ii. 493). In June 1601 Sir Thomas Bodley received a contribution of manuscripts 'to furnish the university library' at Oxford. Before the Antiquarian Society, which ceased to meet regularly after 1604, Cotton read many papers. Eight of them have been published, and treat of the antiquity in England of castles, towns, heraldry, the offices of high steward and constable, the ceremonies of lawful combat, and the introduction of christianity. All show much heterogeneous learning, chiefly derived from manuscript sources. Other readers of papers are profuse in their acknowledgment of indebtedness to Cotton's library, and they spread his fame as a master of precedents so far that in 1600 the queen's advisers referred to him a question of precedency which had arisen between Sir Henry Neville, an English ambassador, and an ambassador from Spain, who were together at Calais discussing the terms of an Anglo-Spanish treaty. Cotton in an elaborate paper decided in favour of his own countryman. On 25 Nov. 1602 Henry Howard, lord Northampton, invited him to supply a list of precedents respecting the office of earl marshal. In 1600 Cotton accompanied Camden on an antiquarian tour to Carlisle, and brought back many Pictish and Roman monuments and inscriptions, some of which a descendant deposited at Trinity College, Cambridge, in 1753 (Stukeley, *Memoirs*, i. 52). Camden was benefiting at the time by Cotton's assistance in preparing a fifth edition of his 'Britannia,' which was duly acknowledged in print. No account of Cotton's travels to the continent is preserved, but he speaks in one of his early tracts of having visited Italy, and it seems probable that he undertook a foreign tour before the close of the sixteenth century.

At the time of James I's accession Cotton was intimate with most of the leading statesmen as well as the leading writers. Bacon and Ben Jonson were often in his library. The former entered in his notebook in 1608 the advisability of making himself better acquainted with its contents, and in 1604 sought a private interview to learn Cotton's opinion about the union of Scotland and England. When the king arrived in England the antiquary was at his country house at Connington, and Ben Jonson and Camden were his guests (Drummond and Jonson, *Conversation Shakspeare Soc.* p. 20). He had just completed the rebuilding of Connington House; had purchased the whole room in which Mary Stuart had been beheaded in Fotheringay Castle, and had fitted it up in his mansion. On presenting himself at court he was knighted (11 May 1603), and was complimented by the king, who called him 'cousin,' on his descent from the Bruces. Henceforward Cotton signed himself 'Robert Cotton Bruceus,' and designated himself Robert Bruce Cotton.

James's tastes lay somewhat in the same direction as Cotton's. The antiquary was taken immediately into the royal favour, and became very friendly with the favourite Somerset. On 18 Feb. 1603-4 he re-entered parliamentary life as M.P. for Huntingdon. On 26 March following he drew up a pedigree of James from the Saxon kings, and a few years later wrote for Prince Henry, at the king's request, a history of Henry III, and 'An Answer to such motives as were offered by certain military men to Prince Henry to incite him to affect arms more than peace.' In 1608 he was appointed to inquire into abuses in the administration of the navy. His report was approved by the king, and although it was not adopted he was invited to attend the privy council when it was under discussion. In 1613 his influence led to a renewal of the investigation, but with little result. In 1611 James seems to have discussed with Cotton the question of increasing the royal revenues, and the antiquary wrote a tract on the various means adopted by former kings in raising money (*Cottoni Posth.* 163–200). He at the same time strongly supported, if he did not originate, the proposal to create the new rank of baronets. He argued in vain that baronets should have precedence of barons' sons, but was one of the second batch upon whom the honour was conferred (29 June 1611), and his was the thirty-sixth baronetcy created. In 1612 he carried a 'bannerol' at Prince Henry's funeral.

Meanwhile Cotton was giving very much assistance to two of his friends, John Speed and Camden, both of whom were engaged on elaborate historical treatises. Speed's 'History of England,' which was published in 1611, was revised in the proof-sheets by Cotton in 1609, and Cotton supplied for it the lists of the revenues of the abbeys and full notes on Henry VIII's reign, besides lending innumerable manuscripts and the many valuable coins which are engraved in the volume. His association with Camden's 'History of Elizabeth' involves matters of

controversy. In 1610 he showed a manuscript copy of it to Bacon, who regarded it as Cotton's compilation, and suggested some additional sentences respecting his father, Sir Nicholas Bacon. Early in 1612 a similar copy, forwarded by order of James I to De Thou, was described as the joint work of Camden and Cotton. When the first part, bringing the reign down to 1588, appeared in 1615, Camden did not acknowledge any assistance from Cotton beyond the loan of autograph letters, but it was still freely quoted as Cotton's compilation. Late in James I's reign, and after Camden's death, Conway (25 June 1624) ordered the Stationers' Company to abstain from reissuing the first part or publishing the second, which was then in the press, until the whole had been revised by Cotton with the king's assistance. Camden's first drafts of the book are now in the Cottonian Library, and show little signs of revision; but it is probable that the story of Mary queen of Scots, about which James was chiefly anxious, was largely inspired by Cotton, and that, although Cotton's share in the undertaking was exaggerated by his contemporaries, Camden worked immediately under his direction. Cotton, who, as Chamberlain wrote (13 July 1615), 'hath ever some old precedents in store,' often discussed antiquarian topics with the king, and a special order was issued to enable him to collect autographs in 1618. James I implored him to write a history of the church of England down to the reformation, but Cotton does not seem to have seriously begun it, and, when Archbishop Ussher took up the subject, freely lent him books and manuscripts. In 1622 Cotton was in treaty for the purchase of the Barocci Library at Venice, but it was unfortunately sold ultimately to a London bookseller and dispersed. After Raleigh was committed to the Tower in 1605 he applied to Cotton for a loan of manuscripts. Bacon worked up his materials for the 'Life of Henry VII' in Cotton's library, although admission was denied him by order of the government after his disgrace in 1621. In 1623 Camden died and bequeathed to Cotton a valuable collection of papers.

A feeling was taking shape in James I's reign that there was danger to the state in the absorption into private hands of so large a collection of official documents as Cotton was acquiring. In 1614 another intimate friend, Arthur Agard [q. v.], keeper of the public records, died, leaving his private collection of manuscripts to Cotton. Strong representations were made against allowing Cotton to exercise any influence in filling up the vacant post. The Record Office was injured, it was argued in many quarters, by Cotton's 'having such things as he hath cunningly scraped together.' In the following year damning proof was given of the evil uses to which Cotton's palæographical knowledge could be put. His intimacy with Somerset was disastrous to him. In 1615 he was induced by Somerset to seek a private interview with Sarmiento, the Spanish ambassador, for the purpose of informing the envoy that the favourite was resolved, contrary to the policy of other advisers of the king, on an alliance with Spain. On another occasion Cotton told Sarmiento that he was a catholic at heart, a phrase to which we are less ready than Mr. S. R. Gardiner to attach any serious importance. Meanwhile Somerset's enemies were closing round him, and in anticipation of the worst he prevailed on Cotton to draw up a general pardon that should be both prospective and retrospective. Cotton modelled the document on one that Henry VIII had given to Wolsey, but Ellesmere, the lord chancellor, positively declined to seal it (20 July 1615), an action which Somerset attributed to Cotton's want of tact. In September Somerset and his wife were in the Tower on the charge of murdering Overbury, and Cotton tried to protect his patron. He obtained a number of incriminating letters in Somerset's handwriting from the Earl of Northampton and handed them to Somerset, who promptly burned them. Other of Somerset's letters were forwarded to Cotton, who set to work to change the dates, so as to substantiate Somerset's plea of innocence. In October Cotton was himself arrested, and many of his books and papers were carried to Whitehall. When examined before the council he confessed all—his negotiation with Sarmiento as well as his manipulation of Somerset's correspondence. After nearly eight months' imprisonment he was freed from custody without trial (13 June 1616), and a pardon was granted him in July. James I showed no resentment, and employed him in 1621 to search Sir Edward Coke's papers; but signs were soon apparent that Cotton had lost his sympathy with the court.

His friendship with Gondomar, Sarmiento's successor, was notorious, but it is erroneous to ascribe his change of political attitude to that connection. A pamphleteer states that Gondomar obtained 10,000*l.* from Cotton and his friends (Scott, *Vox Populi*, 1620), but it is not possible to attach much political significance to this rumour. Cotton had little liking or aptitude for diplomacy, but Gondomar had literary tastes, and, like Casaubon (*Ephemerides*, p. 1036) and other learned foreigners, was doubtless a welcome guest at Cotton House mainly on that account. Of Gondo-

mar's knowledge of the contents of Cotton's library the same pamphleteer has much to say, and represents Gondomar as suggesting that 'an especial eye should be had upon the library of Sir R. C. (an ingrosser of antiquities), that whensoever it came to be broken up (eyther before his death or after), the most choice and singular pieces might be gleaned and gathered up by a catholique hand.' That no real sympathy with the Roman catholics inspired Cotton's political action is proved by a paper which he compiled about 1616, regarding the treatment which popish priests ought to receive. Although he argues for and against the punishment of death, he adopts most of the current calumnies. As a matter of fact, Cotton was interesting himself solely in domestic politics, and was studying the records of the past in order to arrive at definite conclusions respecting those powers of parliament which the king was already disputing. His studies inclined him towards the parliamentary opposition. About 1620 he became friendly with Sir John Eliot, and he soon found that their political opinions coincided at nearly all points. In 1621 he wrote a tract to show that kings must consult their council and parliament 'of marriage, peace, and warre' (*Cott. Posth.*)

Cotton appeared in the House of Commons for the third time as member for Old Sarum in James I's last parliament (2 March 1623–1624), and he was returned to the first parliament of Charles I's reign as M.P. for Thetford (May 1625). Here he first made open profession of his new political faith. On 10 Aug. the discussion on supply was proceeding, and Eliot's friends made a determined stand against the government, then practically in the hands of Buckingham. Neither Eliot nor Cotton spoke in the debate, but the latter handed to Eliot an elaborate series of notes on the working of the constitution. The paper was circulated in the house in manuscript, and was worked up by Eliot into an eloquent essay. Mr. Forster believed that this was delivered as a speech (*Life of Eliot*, i. 244–6), but Mr. Gardiner shows conclusively that Eliot never intervened in the debate (*Hist. of England*, v. 425–6). Cotton's notes came to Buckingham's knowledge, and he took a curious revenge. In the following February it was arranged that the king, on proceeding by water from Whitehall to Westminster for coronation, should land at the steps leading to Cotton's garden. The garden was for a long period before and after these events a favourite promenade for members of parliament (cf. CLARENDON, *Hist.* i. 477). The Earl of Arundel, earl marshal, Cotton's intimate friend, helped him to make elaborate preparations for the king's reception, and early in the morning Cotton and a few friends awaited the arrival of the royal barge. He held in his hand 'a book of Athelstan's, being the fower Evangelists in Latin, that king's Saxon epistle prefix'd [now MS. Cott. tit. A. II.], upon which for divers hundred years together the kinges of England had solemnlie taken their coronation oath.' (It is not apparent by what right Cotton had obtained possession of the volume, and he was summoned to deliver it shortly afterwards to a king's messenger, but it subsequently returned to his library.) The royal barge, however, to Cotton's dismay, 'bawked' his garden; the king landed elsewhere, and the insult was rightly ascribed to the circulation of the obnoxious notes (Symond D'Ewes to Sir Martin Stuteville, in ELLIS, *Orig. Lett.*, 1st ser. iii. 215; D'EWES, *Autob.* i. 291–2). To the second parliament of the reign Cotton was not returned. In September 1626 he protested, in behalf of the London merchants, against the proposed debasement of the coinage, and his arguments, which he wrote out in 'A Discourse touching Alteration of Coyne,' chiefly led to the abandonment of the vicious scheme. In December he was appointed anew a commissioner to inquire into abuses in the navy. But the court was not reconciled to him, and when it was reported that he was printing his 'History of Henry III,' in which he freely criticised the policy of one of Charles I's predecessors, a prosecution of the printers was threatened. The book, however, duly appeared (13 Feb. 1626–7). In May 1627 he drew up an elaborate account of the law offices existing in Elizabeth's reign. Early next year the council invited his opinion on the question of summoning a new parliament, and he strongly recommended that course. In 1628 he published a review of the political situation under the title of 'The Dangers wherein the Kingdom now standeth, and the Remedye,' where he drew attention to the dangers threatened by the growing power of the emperor, and to the sacred obligation of the king to put his trust in parliaments. He was returned to Charles I's third parliament as M.P. for Castle Rising, Norfolk. Before the house met (March 1627–8), the opposition leaders, Eliot, Wentworth, Pym, Selden, and Sir E. Coke, met at Cotton's house to formulate their policy. In parliament Cotton was appointed chairman of the committee on disputed elections, and throughout the two sessions was in repeated correspondence with Eliot.

After the dissolution Cotton was treated by the court as an avowed enemy, and an

opportunity of crushing him was soon found. In November 1629 there fell into the hands of Wentworth, who had just changed sides, a manuscript tract entitled 'A Proposition for his Majesty's Service to bridle the Impertinency of Parliaments' (printed in RUSHWORTH). Its authorship was unknown at the time, and although it proved to have been written seriously it was treated by the king's friends as ironical, and a parody of recent statements of their own policy. A copy was shown to Cotton by the Earl of Clare, father of his friend Denzil Holles. He declared that he knew nothing about it; regarded it as a royalist manifesto; and prepared notes by way of answer. The council, where Laud was 'a sore enemy,' took the matter up, and placed Cotton, St. John, and the Earls of Bedford, Somerset, and Clare, all of whom were known to have read the pamphlet, under arrest. St. John was examined, and stated that the original was in Cotton's house. Orders to seal up Cotton's library were issued; a search was made there and the obnoxious document found (20 Nov. 1629). Cotton denied all knowledge of it, and the case was referred to the Star-chamber. On investigation it proved that the original manuscript in Cotton's library was the work of Sir Robert Dudley, titular earl of Northumberland [q. v.]; that it had been sent by Dudley as early as 1614 to Sir David Foulis, in order to restore the author to the favour of James I; that Cotton's librarian, Richard James [q. v.], who was also arrested, had allowed the parliamentary lawyer, Oliver St. John, to read it and to copy it; that St. John had lent his transcript to the Earl of Bedford, who passed it on to the Earls of Somerset and Clare; and that Flood, a young man living in Cotton's house, and reputed to be his natural son, finding the tract likely to be popular, had sold copies of his own making at high prices. On the day fixed for hearing (29 May 1630) an heir to the throne (Charles II) was born, and Charles I announced that proceedings would be stayed and the prisoners released in commemoration of the event. But Cotton's library was not restored to him. An order had been previously made that he might visit it in the presence of a clerk of the council; a commission was now issued to search the library for records to which the king had a right (12 July), and a catalogue was begun but never completed. On 2 Oct. a further instruction to the commission ordered them to note especially everything in the library which concerned state affairs. Cotton was thus practically dispossessed of his most cherished property, and his health began to fail. Twice in May 1631 he pathetically petitioned the king for pardon and for restitution of his books. In the second petition, in which he was joined with his son Thomas, he stated that the documents were perishing from lack of airing, and that no one was allowed to consult them. But before these petitions were answered the antiquary was dead. Anguish and grief, according to his friend Sir Symond D'Ewes, had changed his 'ruddy and well-coloured' countenance into 'a grim blackish paleness, near to the resemblance and hue of a dead visage.' He died on 6 May 1631, and was buried at Connington. A funeral sermon was preached by one Hughes. Sir John Eliot wrote from the Tower to the author on receipt of a copy: 'He [i.e. Cotton] that was a father to his countrymen, chariot and horseman to his country, all that and more to me, could not but be sorrowed in his death, his life being so much to be honoured and beloved.' Richard James wrote an elegy on his death.

To the last Cotton was adding to his library and helping scholars. In 1627 Sir James Ware sent him a manuscript register of St. Mary's Abbey, Dublin; in 1628 Ussher gave him a Samaritan Pentateuch. In 1629 Augustine Baker requested him to help in furnishing the library of the Cambray convent (ELLIS, *Orig. Lett.* 1st ser. iii. 256). Sir Robert's liberality in lending books did his library some inevitable injury. D'Ewes, whose gossip usually bears traces of malice, states that Richard James, the librarian, was 'a wretched, mercenary fellow,' who disposed of many of his master's books. Sir John Cotton, Sir Robert's grandson, a better authority, asserts that many works lent to Selden were never returned (AUBREY, i. 23). Cotton himself was at times unwilling to give up books that had been lent him, and Laud complained bitterly of his retention of a volume which he had borrowed from St. John's College. His antiquarian zeal is attested by the story that when he heard, after Dr. Dee's death in 1608, that the astrologer had buried many manuscripts in a field, he straightway purchased the land and began excavations, which were not without success (AUBREY, ii. 311). Colomiès states that he discovered by accident in a London tailor's shop an original copy of the 'Magna Carta' (DISRAELI, *Curiosities*). Cotton interested himself in all manner of learning. He owned the skeleton of an unknown fish which he dug up at Connington, and many years later (1658) Sir Thomas Browne begged Dugdale to procure him the loan of it. His collection of coins and medals was one of the earliest. Very many languages were represented in his library. His rich collection of Saxon charters proved the

foundation of the scholarly study of pre-Norman-English history, and his Hebrew and Greek manuscripts greatly advanced biblical criticism. Original authorities for every period of English history were in his possession. His reputation was European. De Thou was one of his warmest admirers, and Gruterus, in his edition of Cicero, describes him as one of the most learned men of the age. Duchesne, Bourdelet, Puteanus all acknowledged obligations to him. Bishop Montague calls him 'the magazine of history,' and among his own countrymen, besides Camden, Speed, Selden, and Raleigh, whom we have already mentioned, Spelman, Dugdale, Sir Henry Savile, Knolles, Gale, Burnet, Strype, and Rymer, the compiler of the 'Fœdera,' all drew largely on his collections.

Cotton wrote nothing that adequately represented his learning, and it is to be regretted that he did not concentrate his attention on some great historical work. His English style is readable, although not distinctive, and his power of research was inexhaustible. Only two works, both very short, were printed in his lifetime, 'The Raigne of Henry III,' 1627, and 'The Dangers wherein the Kingdom now standeth,' 1628. But numerous other pamphlets were widely circulated in manuscript.

Many of his tracts were issued as parliamentary pamphlets at the beginning of the civil wars, among them the following: 1. 'Serious Considerations for repressing the Increase of Jesuits,' 1641; 'An Abstract out of the Records of the Tower touching the King's Revenue,' 1642; 'The Troublesome Life. . . .of Henry III,' 1641, and twice in 1642, once separately and once with Hayward's 'Henry IV;' 'The Form of the Government of the Kingdom of England,' 1642; and 'The Dangers wherein the Kingdom now standeth,' 1643. In 1657 James Howell collected fourteen of Cotton's tracts, under the title of 'Cottoni Posthuma,' dedicated to Sir Robert Pye. This included the 'History of Henry III,' the arguments on the revenue and diplomatic precedents, and the notes for Eliot's speech of 1625. In editions of 1672 and 1679 the 'History of Henry III' was omitted. The tract on peace written for Prince Henry was reissued separately in 1655, and together with the reign of Henry III, by Sir John Cotton, third baronet, in 1675. The tract on the king's duty to consult parliament, written in 1621, was reissued (from the 'Cottoni Posthuma') separately in 1680, under the title of 'The Antiquity and Dignity of Parliaments,' and appeared in the Harleian Miscellany (1744 and 1808). 'A Discourse of Foreign War' was twice printed alone, in 1657 and 1690. Eight papers read by Cotton before the Antiquarian Society are printed in Hearne's 'Curious Discourses' (1771). Manuscripts of all these works abound in public and private libraries—in the Cottonian, Lansdowne, and Harleian collections, at the British Museum, and in very many of the libraries whose manuscript contents are calendared in the reports of the Historical MSS. Commission. In 1657 William Prynne printed a catalogue of the records in the Tower from 12 Edward II to 1 Richard III, 'collected (as is generally voiced and believed) by that most industrious collector. . . Sir Robert Cotton' (*pref.*) A better claimant to the authorship of the volume is, however, William Bowyer, and Robert Bowyer also helped in its compilation.

A new edition of Scott's 'Vox Populi,' issued in 1659 under the title of 'A choice Narrative of Count Gondomar's Transactions . . . in England, by that renowned antiquary, Sir Robert Cotton,' is not to be reckoned among Cotton's authentic works. It is reprinted in Smeeton's 'Tracts' (1820), vol. i.

It is impossible to describe very definitely Cotton's personal character. While numerous letters addressed to him by his friends are extant in his library, few of his own letters are known to be in existence. Two, dated 1624, in the Public Record Office, addressed to his brother Thomas, in which he calls himself David and his correspondent Jonathan, give an attractive picture of his domestic virtues. A little of his correspondence with Sir John Eliot is still at St. Germans, and proves him to have been an admirable friend. A few other of his letters are in the British Museum.

Engraved portraits of Cotton are prefixed to Smith's Catalogue (from a painting by C. Johnson, dated 1629) and to the 1655 edition of his treatise on peace (by T. Cross). The best portrait is that engraved by George Vertue from a picture by Paul Van Somer, in the Society of Antiquaries' 'Vetusta Monumenta,' i. plate lxvi. A painting by an unknown artist, presented to the British Museum in 1792, is now in the National Portrait Gallery. A bust by Roubiliac was placed in Trinity College Library, Cambridge, in 1750.

Sir Thomas Cotton, the second baronet (1594–1662), Sir Robert's only surviving child, made great efforts for the restitution of his father's library. D'Ewes states that he showed no sorrow for his father's death. On 23 July 1631 the council ordered the catalogue to be continued; but in September Sir Thomas announced that it had been again interrupted, and begged to be allowed to retain possession of the books. This request was ultimately granted, although the date

is uncertain. Sir Thomas was the intimate friend and correspondent of Sir John Eliot, and was entrusted by his influence with the representation of St. Germans (Eliot's native place) in the third of Charles I's parliaments. He was M.P. for Huntingdon in the short parliament of 1640, but took no active part in politics. Like his father, Sir Thomas gave scholars free access to his library. Dugdale from an early age was very often there, and obtained there much of his material for his 'Monasticon.' In 1640 Sir Thomas lent his father's collection of coins to Sir Symond D'Ewes, a loan which the recipient hardly deserved after having written in his autobiography (ii. 43) 'that Sir Thomas was wholly addicted to the tenacious increasing of his worldly wealth, and altogether unworthy to be master of so inestimable a library.' Sir Thomas seems to have taken no part in the civil wars, but, knowing the suspicions which his library excited in all political parties, he removed the greater part in 1650 to a villa at Stratton which belonged to his son's wife (STUKELEY, *Itin. Curiosum*, v. 78; LYSONS, *Magna Brit.* i. 87). His house at Westminster was left at the disposal of the parliament, and Charles I slept there during his trial. He died at Connington on 13 May 1662, and was buried with his father. He married, first, Margaret, daughter of William, lord Howard, of Naworth Castle, Cumberland, by whom he had one son, John; second, Alice, daughter and heiress of Sir John Constable of Dromanby, Yorkshire, widow of Edmund Anderson of Stratton and Eyworth, Bedfordshire, by whom he had four sons. (The second son, Robert, was M.P. for Cambridgeshire, was knighted, was commissioner of the post office, and friendly with Evelyn.)

Sir JOHN COTTON (1621–1701), the eldest son of Sir Thomas by his first wife, showed himself more of a scholar than his father. His letters (1680–90) to his friend, Dr. Thomas Smith, who first catalogued Sir Robert's library, indicate a real love of learning and wide reading. They are interspersed with Latin and Greek quotations, original Latin verses, and criticisms of ancient and modern writers, besides exhibiting deep reverence for his grandfather's memory. In one letter he states that he was engaged on his autobiography (AUBREY, *Letters*, i. 20–6). Sir John, who edited two of his grandfather's tracts, added to the library, and allowed Dugdale, who introduced Thomas Blount to his notice, to make whatever use he pleased of it. Evelyn knew him well, and Pepys slightly; the former describes him as 'a pretended great Grecian, but had by no means the parts or genius of his grandfather' (*Diary*, 2 July 1666, ii. 197). By his first wife he became possessor of a villa at Stratton, Bedfordshire, where he lived in his later years. In 1700 Sir John made known his intention of practically giving the Cottonian Library to the nation, but died 12 Sept. 1702, aged 81, before any final arrangements for the public use of the library were made. His portrait was painted by Sir Godfrey Kneller, and has been engraved. Sir John married, first, Dorothy, daughter and heiress of Edmund Anderson of Stratton and Eyworth, Bedfordshire, his stepmother's daughter; and, second, Elizabeth (*d.* 3 April 1702), daughter of Sir Thomas Honywood of Mark's Hall, Essex. By his first wife he had an only son, John, who died before him in 1681, and by his second wife another son, Robert.

The third baronet's immediate successor was his grandson (son of his elder son), JOHN (1679–1731). He was elected M.P. for Huntingdon in 1705, was unseated on petition, and was M.P. for Huntingdonshire Dec. 1710 to 1713. In 1708 he married Elizabeth (*d.* 11 Feb. 1721–2), daughter of James Herbert of Kingsey, Oxfordshire, granddaughter of the Duke of Leeds, and died 5 Feb. 1730–1, being buried in Lamb's Conduit Fields. He carried out his grandfather's wishes respecting the library. His uncle ROBERT (1669–1749) became fifth baronet. He was educated at Trinity College, Cambridge, was twice married, and died 12 July 1749. His son, Sir JOHN, sixth baronet, died without issue on 27 March 1752, and the title became extinct. The sixth baronet was a friend of Dr. Stukeley (STUKELEY, *Memoirs*, i. 216–20). Connington House was pulled down in 1753.

Meanwhile the Cottonian Library had passed entirely out of the hands of the family. In 1700, in accordance with the wishes of the third baronet, who died in 1702, an act of parliament (12 and 13 Will. III, cap. 7) was passed declaring that 'Sir John Cotton, in pursuance of the desire and intention of his father and grandfather, is content and willing that his mansion house and library should continue in his family and name, and that it be kept and preserved by the name of the Cottonian Library for public use and advantage.' In April 1706 Sir Christopher Wren was directed to fit up the library for public use, and reported that Cotton House had fallen into complete decay. William Hanbury, the fourth baronet's brother-in-law, was appointed keeper (June 1706), but soon afterwards Dr. Bentley, the royal librarian, and his deputy, David Casley, claimed full control. In 1707 an act of parliament (6 Anne, cap. 30) recited that, to increase the public utility of the library, Cotton House, with the library and

garden, should be purchased of Sir John Cotton for 4,500*l.*, and vested in the queen and her successors for ever, and a new building should be built for the library. The new building was never erected, and the ruinous condition of Cotton House necessitated the removal of the library to Essex House in the Strand in 1712. It remained there till 1730, when Ashburnham House in Little Dean's Yard, Westminster, was purchased to receive it, together with the royal library. On 23 Oct. 1731 the Cottonian library was partially destroyed by fire (*Gent. Mag.* 1731, p. 451). Exaggerated reports of the damage done were circulated, and Hearne speaks of the irreparable loss in the preface to his 'Benedictus Abbas' (p. xiv). The House of Commons ordered a committee to examine the remains of the library in the next year, and their valuable report, published in 1732, states that out of a total of 958 volumes of manuscripts, 746 were unharmed, 114 totally destroyed or injured, and 98 partially injured. Some measures were taken to repair the injured volumes, which were deposited with the rest of the library in a new building intended to be a dormitory for Westminster School, but nothing very effectual was done. In 1753, on the foundation of the British Museum, the library was removed to its present home in Bloomsbury. In 1824 a new attempt was made to restore the burnt fragments, but it was not till 1842 that a successful method of repairing them was applied. Under Sir Frederick Madden's care 100 volumes on vellum and 97 on paper were renovated, and among them the valuable fourth-century manuscript of Genesis, and the chronicle of Roger of Wendover, both of which were assumed to have been destroyed.

The first catalogue of the library drawn up by Dr. Thomas Smith was published in 1696. It does not fully describe the contents of all the volumes, and the 170 volumes of state papers and small tracts are practically overlooked. A history of the library is added, and some notices of it are given from learned works. An unprinted class catalogue of about the same date is in MS. Harl. 694, No. 21. A more satisfactory catalogue than either of these was issued with the parliamentary report of 1732. But the one now in use was compiled by Joseph Planta, librarian of the British Museum, in 1802. The books were arranged in the original library in fourteen presses, each of which was surmounted by a bust. The busts included the twelve Roman emperors, together with Cleopatra and Faustina, and each press was named after one of these personages. This nomenclature is still retained. Humphrey Mosley drew up several papers of rules for the guidance of students, which are extant in the Lansdowne MSS. (814, No. 56; 846, Nos. 65, 70; 841, No. 28).

[Cotton's life has never been fully written. Dr. Thomas Smith prefixed a memoir to his catalogue of 1696, and he received some assistance from Sir Robert's grandson, but although interesting, it is not complete. The notices in the Biog. Brit. (Kippis) and in Hearne's Curious Discourses are not more satisfactory. The contemporary authorities are Sir Symond D'Ewes's Autobiography (ed. Halliwell, 1845, 2 vols.); the Calendars of State Papers, 1591–1631; the Parliamentary Journals; Nichols's Progresses of James I; the letters addressed to Cotton on antiquarian topics, many of which are printed in Letters of Eminent Lit. Men (Camd. Soc.), and the official lists of members of parliament. Valuable notices appear in Gardiner's Hist.; in Forster's Life of Sir John Eliot; in Spedding's Bacon; and in Nichols's Leicestershire, ii. 835–8. Mr. Sims gives a general account of the library in his Handbook of Brit. Mus.; the catalogues mentioned and the Calendars of Treasury Papers, 1702–19, supply details. Nichols's Anecdotes and Illustrations give some facts. Collins's Baronetage, i. 128–41, Luttrell's Relation, Aubrey's Letters, and Dugdale's Autobiography, are useful for the lives of Sir Robert's descendants.] S. L.

COTTON, ROGER (*fl.* 1596), poet, was the fifth son of Ralph Cotton, esq., of Alkington, in the parish of Whitchurch, Shropshire, by Jane, daughter and heiress of John Smith, alias Tarbock, of Newcastle-under-Lyme, Staffordshire. He had five brothers, most of whom were patrons of literature; and Allen, the youngest, became lord mayor of London and received the honour of knighthood. Roger was born at Whitchurch and probably educated in the newly founded free school there. He settled in London and carried on the business of a draper in Canning Street, having been admitted a member of the Drapers' Company. His mind became deeply imbued with the religious sentiment in consequence of his friendship with the celebrated Hugh Broughton [q. v.] He proved to be 'a true scholar of such a master, and so constantly plied the Scriptures, according to the admonitions he had received from him, that he read over the Bible twelve times in one year' (Lightfoot, *Life of Broughton*). The Cotton family esteemed Broughton so highly that when he was abroad they sent him frequently large tokens of their love—occasionally 100*l.* at a time. The date of Roger Cotton's death is not recorded, but by his will he bequeathed 50*s.* to be annually paid by the Drapers' Company for the use of the poor of Whitchurch. He married Katherine [Jenkes] of Drayton, Shropshire, and left two sons, Samuel and Alexander.

He was author of the following rare works:

1. 'A Direction to the waters of lyfe. Come and beholde, how Christ shineth before the Law, in the Law, and in the Prophetes: and withall the iudgements of God upon all Nations for the neglect of his holy worde, wherein they myght haue seene the same,' London, 1590, 1592, 4to. This prose discourse is dedicated to Hugh Broughton. A third edition appeared with the title: 'A Direct Way, whereby the plainest man may be guided to the Waters of Life,' London, 1610, 8vo. 2. 'An Armor of Proofe, brought from the Tower of Dauid, to fight against Spannyardes, and all enimies of the trueth,' London, 1596, 4to, dedicated to Gilbert Talbot, earl of Shrewsbury. A poetical tract, in six-line stanzas. 3. 'A Spirituall Song: conteining an Historicall Discourse from the infancie of the world, untill this present time: Setting downe the treacherous practises of the wicked, against the children of God: Describing also the markes and overthrow of Antichrist, with a thankesgiuing to God for the preseruation of her Maiestie, and of His Church. Drawen out of the holy Scriptures,' London, 1596, 4to, dedicated to Sir Francis Drake. In five-line stanzas.

Some of Ireland's forged manuscript remarks, purporting to be by Shakespeare, were made in copies of Cotton's two poetical works.

[Corser's Collectanea, ii. 484–97; Bibl. Anglo-Poetica, pp. 54, 55; Ritson's Bibl. Poet. p. 174; Brydges's Restituta, iii. 138–44; Addit. MS. 24487, f. 107; Addit. Charter, 5979; Lowndes's Bibl. Brit. (Bohn), p. 535.] T. C.

COTTON, Sir ST. VINCENT (1801–1863), gambler and driver of the Brighton coach, eldest son of Admiral Sir Charles Cotton, baronet [q. v.], was born at Madingley Hall on 6 Oct. 1801, and succeeded his father as the sixth baronet in 1812. He was educated at Westminster and Christ Church, Oxford, but it is not on record that he took any degree. He obtained a lieutenancy in the 10th light dragoons on 13 Dec. 1827, and served with his regiment in Portugal. During his residence abroad he kept up a correspondence with the driver of the 'Cambridge Times' coach, in which he did not give a very favourable opinion of the Portuguese. After his return to England he retired from the army on 19 Nov. 1830. He very soon distinguished himself in the hunting, shooting, racing, cricketing, and pugilistic world. He hunted at Melton and was umpire for Captain Ross in the Clinker and Radical match. From 1830 to 1835 he was a constant player in the Marylebone matches, and the love of cricket clung to him to the last. He was familiarly known either as Vinny Cotton or as Sir Vincent Twist. He lived among a roystering set who were great patrons of the prize-ring, and with Lord Waterford, Lord Waldegrave, and others he was a constant visitor to Jem Burn's parlour, whence they made midnight sallies on area bells, door-scrapers, knockers, &c. His favourite maxim with respect to the procedure to be adopted in a row was, 'Pitch into the big rosy men, but if you see a little lemon-faced nine-stone man, have nothing to do with him.' He was also, with his friends, frequently to be found at Tom Spring's levées in Castle Street, Holborn. His insatiable passion for hazard was, however, his ruin, and Crockford is reported to have said of Cotton that he never knew his equal in fondness for play or a more dangerous player. Having entirely dissipated the Madingley property, he was obliged to look out for some means of obtaining a living, and taking advantage of his skill as a coachman, and aware of the profits to be made on the Brighton road by a well-appointed coach, he bought the goodwill of the 'Age' from Jack Willaw, and for years drove it from Brighton to London and back. Coach-travelling had never been brought to such a pitch of perfection as it then reached under Cotton's auspices. The passengers were convinced that no team could get away from him, while his anecdotes and jokes caused the time to pass most pleasantly, and many a half-sovereign was the reward he received from his customers. The 'Age,' however, could not ultimately compete with the railway, and he had reluctantly to give up his coach. Nearly a quarter of a century before he died he was described as prematurely wrinkled and toothless, and for the last few years of his life he was so completely paralysed that he had to be carried to his carriage and strapped to the seat. He died at his residence, 5 Hyde Park Terrace, Kensington Road, London, on 25 Jan. 1863.

[Morning Post, 28 Jan. and 4 Feb. 1863; Sporting Mag. February 1863, p. 87; Gent. Mag. March 1863, pp. 393, 402; Lillywhite's Cricket Scores, ii. 140 (1862).] G. C. B.

COTTON, Sir STAPLETON (1773–1865), sixth baronet, first Viscount Combermere, field-marshal, colonel 1st life guards, and constable of the Tower of London, was second son and fifth child of Sir Robert Salusbury Cotton, fifth baronet of Combermere Abbey, Whitchurch, Shropshire, by his wife Frances, daughter and coheiress of Colonel James Russell Stapleton of Boddrhyddon, Denbighshire, and was born at the old seat of the Stapletons, Llewenny Hall, Denbighshire, where his father resided until he succeeded

to the baronetcy, on 14 Nov. 1773. His father, who sat in parliament for Cheshire for forty years, was ardently devoted to country pursuits, and kept up an open-handed hospitality, which eventually caused him to sell the Stapleton estates for 200,000*l*. At the age of eight Stapleton Cotton was sent to a grammar school at Audlem, a few miles from his father's park gates, where Vernon Harcourt, afterwards archbishop of York, was one of his schoolfellows, and where his education was greatly neglected. A quick, lively boy, he was known by his family as 'Young Rapid,' and was continually in scrapes. Afterwards, he was four years at Westminster School (entered 28 Jan. 1785), his father at that time having a town house in Berkeley Square. Next he went to a private military academy at Norwood House, Bayswater, kept by Major Reynolds of the Shropshire militia, where he learned little more than cleaning his firelock and accoutrements. On 26 Feb. 1790 he obtained a second lieutenancy without purchase in the 23rd royal Welsh fusiliers, and joined that corps in Dublin the year after. He became first lieutenant 16 March 1791, and did duty with the regiment until 28 Feb. 1793, when he was promoted to a troop in the 6th carabiniers. That fine regiment—the old 3rd Irish horse—was then notoriously Irish in tone, and the hard-drinking and duelling proclivities of his brother officers gave 'Little Cotton's' friends some concern, but his temperate habits and good temper kept him out of trouble. He embarked with his regiment in August 1793, and joined the Duke of York's army just after the siege of Dunkirk, and made the campaigns of that year and the following spring, when he was present at Prémont and the cavalry battle at Cateau in 1794. A few days after the latter Cotton was promoted to a majority in the 59th foot, and on 9 March 1794, at the age of twenty-one, became lieutenant-colonel of the newly raised 25th light dragoons, then known as Gwyn's hussars. He commanded the regiment at several stations in the south of England, including Weymouth, where he was a good deal noticed by George III and the royal family, and in 1796 embarked with it for the Cape and India. The regiment arrived at the Cape about July 1796, and, in view of an expected attack by the French and Dutch fleets on the colony, was at once mounted on Boer horses, in readiness for field service. Cotton commanded the advance guard of the force sent from Cape Town to Saldanha Bay, which witnessed the surrender, on 18 Aug. 1795, of the Dutch ships which had escaped when the colony was taken by the British in September 1795. The 25th dragoons then went on to Madras, and served through the campaign against Tippoo Sahib in 1799, including the battle of Malavelly and the siege of Seringapatam, during which Cotton appears to have made acquaintance with Colonel Arthur Wellesley. Cotton's elder brother, Robert, having died, his father, anxious for the return of his surviving son, procured for him an exchange home. Accordingly, he left the 25th (re-numbered a year or two later as the 22nd) light dragoons at Madras early in 1800, and joined the 16th light dragoons on the Kentish coast. There he met and, after a three months' courtship, married his first wife, Lady Anna Maria Clinton, a beautiful girl of nineteen, then staying at Margate with her mother, who was the widow of the third Duke of Newcastle, and afterwards married to General Catline Crauford. Cotton was next stationed with his regiment at Brighton for some time, and then proceeded with it to Ireland, and was stationed at Gort, where his eldest son was born, and afterwards in Dublin, where the 16th were quartered during Emmett's insurrection. Cotton, who attained the rank of colonel on 1 Jan. 1800, became a major-general 30 Oct. 1805, and for a time had command of a cavalry brigade at Weymouth under the Duke of Cumberland. In 1806 he was returned for Newark and sat for that borough until his elevation to the peerage. His wife, to whom he was tenderly attached, died in 1807, of a rapid decline, and for some time after Cotton remained in retirement with his family. In August 1808 he was despatched to Vigo with a brigade composed of the 14th and 16th light dragoons, the destination of which was changed to Lisbon. The brigade was employed on the Portuguese frontier during Moore's campaign in Spain, and afterwards served in the north of Portugal in 1809, including the operations against Oporto. Until the arrival of Lieutenant-general Payne, Cotton was in command of the whole of the allied cavalry. At Talavera he commanded a brigade and did signal service, unrecorded in the despatches (see *Comb. Corresp.* i. 121–2). News reached him of his father's death at the end of the year, and in January 1810 he went home. A baronet with a goodly estate, which, through his father's unbusiness-like habits, was sorely in need of supervision, a man of fashion and well received in society, Cotton had many inducements to remain at home; but he preferred to pursue a military career, his qualifications for which, owing, perhaps, to his very youthful appearance at the time, and his modest reticence in regard of his services, were not always fully recognised. He is described at the time as of moderate stature,

sparely built, very active, and an excellent horseman. He possessed a special aptitude for inspecting troops of all arms, particularly his own, having an intimate knowledge of details, and never allowing 'smartness' to serve as a cloak for deficiencies. Splendid in dress—his uniform and horse trappings were declared to be worth 500 guineas ransom—and ever foremost in danger, he was known as the 'Lion d'Or,' but not in any case was betrayed into exposing his men or fatiguing his horses unnecessarily; and Wellington, who recognised the imperative need of husbanding his inadequate force of cavalry, was wont to declare that in entrusting an order to Cotton he knew it would be carried out with discretion as well as zeal. On rejoining the army in the summer of 1810 Cotton was appointed to the command of the 1st division, and afterwards to that of the whole of the allied cavalry, with the local rank of lieutenant-general. He attained the same rank in the British army 1 Jan. 1812. Among his more important services at the head of the cavalry —which constituted a separate division after May 1811, the divisional cavalry and other duties being detached therefrom as needed—may be mentioned the covering of the long retreat from Almeida to Torres Vedras, lasting from July to September 1810, in which not a single baggage-wagon was left behind; the brilliant affair at Llerena, on 11 April 1812, during a cavalry demonstration towards Seville, when, by judicious measures concerted amid all the difficulties of a night march, he attacked and overthrew a superior force of Soult's rearguard; his foresight at Castrejon, near Salamanca, on 18 July 1812, when with Anson's brigade of cavalry and the 4th and light divisions he held Marmont's entire army at bay and baffled plans that would have jeopardised the whole British army; and his services at the battle of Salamanca, where he was second in command under Lord Wellington, and led the famous charge of Le Marchant's and Anson's heavy brigades. A chance volley from a Portuguese picket after the battle severely wounded Cotton in the right arm, and it was feared would have necessitated amputation. His arm was saved, and he went home, Lord Wellington writing to Colonel Torrens, the military secretary: 'Sir Stapleton Cotton is gone home. He commands our cavalry very well—indeed much better than some that might be sent to us and might be supposed cleverer than he is.' Wellington appears to have objected to Lord Bathurst's idea of conferring a peerage on Cotton, for fear of giving umbrage to Marshal Beresford, who was Cotton's senior in the army (*Suppl. Desp.* vii. 484). While at home Cotton became engaged to his second wife, Caroline, second daughter of Captain W. Fulke Greville, royal navy. A passage out of twenty-eight days made him three days late for the battle of Vittoria, but he commanded the allied cavalry throughout the ensuing campaigns in Spain and the south of France up to the peace, including the actions in the Pyrenees, at Orthez, and at Toulouse. On his return home Cotton, who had already received the red ribbon of the Bath, was raised to the peerage as Baron Combermere of Combermere Abbey, with a pension of 2,000*l.* a year for his own and two succeeding lives. His second marriage (18 June 1814) took place at Lambeth Palace, at eleven o'clock on the night of the grand entertainment to the allied sovereigns at the Guildhall, where the new peer was one of the guests. The lady was twenty years his junior, but the marriage promised to be in all respects a happy one. Among other points in common were their musical tastes, Combermere having some vocal and musical pretensions and his wife being an accomplished musician. Napoleon's return from Elba brought Combermere to the front again, but to the Duke of Wellington's annoyance the command of the cavalry in Belgium was given to Lord Uxbridge, afterwards Marquis of Anglesey. The appointment was known to have been made at the instance of the Prince Regent, and Combermere's biographers assume that the latter credited Combermere with a share in some gossip set afloat in Brighton years before concerning the prince's relations with Mrs. Fitzherbert. On the very day after Waterloo the duke wrote: 'We must have Lord Combermere, if he will come.' He came at his old leader's call, arriving in Paris on 18 July 1815, and commanded the whole of the allied cavalry in France until the following year, when the reduction of the army of occupation deprived him of his post. In 1817 he was appointed governor of Barbadoes and commander-in-chief in the Leeward Islands, which he held until June 1820. During his West Indian command Combermere's tact and sound sense did good service on several occasions, notably in restoring friendly relations with the French West India islands, which had been disturbed by a supposed discourtesy to the French flag on the part of an English man-of-war. A grievous shock befell him soon after his return in the death of his eldest son, who died, quite unexpectedly, of a neglected cold and sore throat in 1821. From 1822 to 1825 Combermere was commander-in-chief in Ireland. A successor to Sir Edward Paget, as commander-in-chief in India, being then needed, and an expedition against the fortress

of Bhurtpore being not unlikely, Combermere was selected by the court of directors of the East India Company as the fittest man for the post, it is said, on the advice of the Duke of Wellington (see *Comb. Corresp.* ii. 29–30). Combermere, who attained the rank of general on 27 May 1825, had by that time started for India, leaving Lady Combermere at home. The expedition against Bhurtpore was successfully carried out; the great Jât fortress, which had been a standing menace to British rule ever since Lord Lake failed against it twenty years before, was taken with comparatively little loss and razed to the ground. Combermere was made a viscount in 1827, and on 16 Sept. 1829 colonel of the 1st life guards, having already been colonel of the 20th light dragoons 1813–18 and of the 3rd light dragoons 1821–29. He remained in India for the customary period of five years, during nine months of which he acted as governor-general while Lord Amherst was away on the hills, and returned home in 1830. On his return Combermere parted from his second wife. On her deathbed, at Dover, in January 1837, Lady Combermere 'absolved him of all blame and unkindness throughout their union, and regretted the years of happiness lost to both by the misunderstanding' (*ib.* ii. 243). In 1838 Combermere married his third wife, Mary Woolley Gibbings, only child of Mr. Gibbings of Gibbings Grove, co. Cork, and grandniece of an old Minden officer of the same name, who was in command of the royal Welsh fusiliers when Combermere served in that corps in Dublin forty-eight years before. The last thirty years of his long life were passed in the unostentatious performance of his parliamentary and social duties. An old-fashioned conservative, he was opposed to catholic emancipation, and voted against the reform bill, the repeal of the corn laws, army short service, and other innovations, but his modest, kindly nature made no political foes. He was governor of Sheerness from 1821 until 1852. On the death of the Duke of Wellington he was made constable of the Tower of London, and in 1855 a field-marshal. His last public duty was in April 1863, at the marriage of the Prince of Wales, when, in the ninetieth year of his age and the seventy-third of his military service, he attended as gold stick in brigade waiting. His death was accelerated by a severe cold. He died peacefully on 21 Feb. 1865. He was buried in the family vault in the parish church of Wrenbury, Shropshire, where is a monument to his memory. His third wife and three children by his second wife, a son and two daughters, survived him. At the time of his death Lord Combermere held the military appointments before recounted, was a grand cross of the Bath (1815) having been K.B. from 1812; was knight of the Hanoverian Guelphic order (1817), and of the Portuguese order of the Tower and Sword; was knight of Star of India (1861) and of St. Ferdinand and of Charles III in Spain; and was lord-lieutenant of the Tower Hamlets. For forty-five years he had been provincial grand master of the Freemasons in the county of Cheshire. A small cabinet portrait of him, about the time he was commander-in-chief in Ireland, taken in the now obsolete uniform of a general of British hussars—the gold-barred jacket and pelisse and scarlet overalls, which were his favourite battle garb in the Peninsula—is in the National Portrait Gallery. Two others, in possession of the family—one representing him as a youthful lieutenant-colonel of twenty-one, in the French-grey uniform of the 25th dragoons, the other as a field-marshal of ninety—are engraved in the 'Combermere Correspondence.' A memorial, in the shape of an equestrian statue, by Marochetti, for which the field-marshal sat repeatedly a year or two before his death, has been erected at Chester Castle, the cost of which, amounting to 5,000*l.*, was defrayed by public subscription in the county.

[An excellent biography of Lord Combermere was prepared some years back, from original materials, by his widow, Mary, Viscountess Combermere, assisted by Captain (now Colonel) W.W. Knollys, and published under the title of the Combermere Correspondence, 2 vols. 8vo (London, 1866). It should be collated with the notices of Lord Combermere in the Wellington Despatches and Supplementary Despatches and Correspondence, and with the personal narratives, English and German (for the latter see the works of North Ludlow Beamish), of those present in the campaigns wherein he was engaged.]

H. M. C.

COTTON, Sir SYDNEY JOHN (1792–1874), lieutenant-general, governor of Chelsea Hospital, was one of the twelve children of Henry Calveley Cotton of Woodcote, Oxfordshire, uncle of the first Viscount Combermere, by his wife, the daughter and heiress of John Lockwood of Dewshall, Essex. Among his brothers were the present General Sir Arthur Cotton, K.C.S.I., the late Admiral Francis Vere Cotton, royal navy, General Frederic Cotton, royal engineers, and Richard Lynch Cotton [q. v.], provost of Worcester College, Oxford. Sydney Cotton, the second son, was born 2 Dec. 1792, and on 19 April 1810 was appointed cornet without purchase in the late 22nd light dragoons in India, in which regiment he became lieutenant 13 Feb. 1812. When the 22nd dragoons was disbanded,

Cotton was placed on half-pay, but continued in India, where he was serving as aide-de-camp to Major-general Hare at Bangalore. In 1822 he purchased a company—his only purchased step—in the 3rd Buffs, then in New South Wales, and after its removal to India served as aide-de-camp, and for a time as military secretary, to his kinsman, Lord Combermere, commander-in-chief in India. In 1828 he was appointed to a majority in the 41st in Burmah, and subsequently exchanged to the 28th in New South Wales. He became a brevet lieutenant-colonel 23 Nov. 1841, and about the same time was despatched from headquarters, Paramatta, in charge of five hundred male and female convicts, to re-form an old station at Moreton Bay, on the east coast. The district was declared open to settlement soon afterwards, and is now the colony of Queensland. Cotton accompanied the 28th to Bombay, whither it was sent on the news of the disasters in the Khyber Pass, but the virulence with which cholera attacked the regiment on arrival and clung to it prevented its taking the field, although it was so employed for a while under Sir Charles Napier in Scinde, when the ameer threatened a renewal of hostilities a year later. Cotton became regimental lieutenant-colonel 8 June 1843, and when the 28th was ordered home in 1848 effected an exchange with Colonel, afterwards Sir John, Pennefather to the 22nd foot, with which he remained in India. He commanded a combined force of the three arms sent as a reinforcement to the north-west frontier in 1853, during the agitation consequent on the murder of the British commissioner, Colonel Mackesay, at Peshawur, and proceeded with it to the Kohat Pass, where he brought the refractory tribes into submission. The same year he commanded the 22nd with a force under Brigadier Boileau, employed against the Boree Afredees, and in 1854 was despatched with a force of 4,500 men to punish the Momund tribes at Shah Mooseh Khef. He became brevet-colonel 20 June 1854, and when the 22nd foot went home he exchanged to the 10th foot in Bengal. At the outbreak of the Sepoy mutiny Cotton was commanding in the Peshawur valley as first-class brigadier. Of moderate stature and spare active form, his forty-seven years of military service sat lightly on him, and he was known to be one of the best regimental officers in the service. His previous Indian experience may be summed up in his own words: He served in the Madras presidency many years, and in Burmah for a time; in the Bombay presidency many years, and in Scinde for a time; in the Bengal presidency, at two periods of his life, for a vast number of years; and at almost every station in the three presidencies where European troops were located. He served in a light cavalry regiment in the Carnatic and Mysore for over ten years, and in command of a squadron in the ceded districts during the Pindarree war of 1816–17; on the staff of a general officer at Bangalore for two years; in command of a station near Madras; as deputy adjutant-general and deputy quartermaster-general of the royal forces in Madras; as aide-de-camp to the commander-in-chief in India, and military secretary. He served under Sir Charles Napier in Scinde, and commanded a field-brigade at Deesa in the Bombay presidency, and brigades at Umballa, Rawul Pindi, and Peshawur in the Bengal command (Cotton, *Nine Years on the N.-W. Frontier*, preface). The outbreak of the mutiny furnished the opportunity for testing his fitness for higher military command which had hitherto been wanting, and the annals of the north-west frontier during that most anxious time bear record that he was equal to the occasion (Kaye, *Hist. Sepoy Mutiny*, ii. 453 et seq.) He was, as Lord Lawrence pronounced him to be, the right man for the place (*Life of Lawrence*, i. 463). When the worst was over, Cotton was despatched to Sittana, in command of an expeditionary force, with the late Sir Herbert Edwardes as political agent, to root out a colony of Hindustani fanatics and rebel sepoys, who had established themselves over the Eusofzie border, a service performed with great judgment and success, the offenders being punished without rousing the hostility of the adjacent tribes. For his frontier services Cotton was made K.C.B. He became major-general 26 Oct. 1858, and was appointed colonel of his old regiment, the 10th foot, on 5 Feb. 1863. For some years he commanded the north-western district with headquarters at Manchester. He became lieutenant-general 20 April 1866; was appointed honorary colonel of the 1st Cheshire Rifle Volunteers in 1869; was made governor of Chelsea Hospital, in succession to Sir John Pennefather, 10 May 1872; and G.C.B. 24 May 1873. He died 20 Feb. 1874.

Cotton married Marianne, daughter of Captain Halkett, late 22nd dragoons, and by that lady, who died in 1854, was father of Colonel Lynch Stapleton Cotton.

Cotton was author of the following works: 1. 'Remarks on Drill, with rough sketches of Field-days and Diagrams' (Calcutta, 1857). 2. 'The Central Asian Question; a prophecy fulfilled' (pamphlet, 16 pp. Dublin, 1869). 3. 'Nine Years on the North-West Frontier, from 1854 to 1863' (London, 1868, 8vo). In the latter, together with a narrative of events preceding and during the mutiny, the writer

has given his views on various Indian military questions, which, as embodying the experience of a queen's officer whose knowledge of India was exceptionally great, and who possessed in a remarkable degree the confidence of his soldiers, are of lasting value, although they give but an imperfect idea of the assiduity with which for years the writer persevered in the too often thankless task of pointing out abuses and in endeavouring in every possible way to ameliorate the condition of the British soldier in India.

[Foster's Peerage, under 'Combermere;' Army Lists; Colonel F. Brodigan's Hist. Rec. 28th Foot (London, 1884), pp. 94–9; Kaye's Hist. Sepoy Mutiny, ii.; R. Bosworth Smith's Life of Lord Lawrence, two last chapters of vol. i. and first eight chapters of vol. ii.; Lady Edwardes's Memorials of the Life and Letters of Sir Herbert Edwardes (London, 1886); Cotton's Nine Years on the North-West Frontier (London, 1868), passim; Ann. Reg. 1874, p. 135.] H. M. C.

COTTON, WILLIAM (*d.* 1621), bishop of Exeter, was the eldest son of John Cotton, a citizen of London, but descended from an ancient family of Staffordshire, by Pery, daughter of Mr. Cheyne. Though he was born in London, 'his infancy,' says Fuller, 'was much conversant about Finchley in Middlesex.' He went to Queens' College, Cambridge, in 1572, and became M.A. in 1575. Almost as soon as he had taken orders in the English church, its honours were showered upon him. The prebendal stall of Sneating in St. Paul's Cathedral was held by him from 1577 to 1598, and the archdeaconry of Lewes from 1578 to 1598. On 12 Nov. in the latter year he was consecrated bishop of Exeter, and in 1600 he obtained a dispensation to hold with this see the rich rectory of Silverton. He also held the office of precentor of the cathedral, with a canonry annexed, from 1599 to 1606, when he resigned this piece of preferment to his son, but quickly consoled himself (1 April 1608) with a prebendal stall in his cathedral. Cotton was notorious for the preferments which he bestowed upon his family, and for the fierceness of his opposition to any doctrines or practices savouring of puritanism. A clergyman called Snape (according to Fuller) came from Jersey and sowed the seeds of nonconformity in the diocese of Exeter, but the bishop plucked them up soon. In his old age he was apoplectic, and for some days before his death was deprived of speech; all that he could say was 'Amen, amen, often reiterated,' which made 'some scandalous tongues' exclaim that he lived like a bishop, but died like a clerk. He died of stone at Silverton, where he usually resided, on Sunday, 26 Aug. 1621, and on 31 Aug. was buried on the south side of the choir, a monument to his memory, 'containing his portraicture, at large in his robes, cut in alabaster, curiously carved and painted,' with a long set of Latin verses, being placed in a different part of the cathedral. His widow, Mary, daughter of Thomas Hulme, of the county of Chester, and relict of William Cutler, citizen of London, was buried near the bishop in Exeter Cathedral on 29 Dec. 1629. A full genealogical table of the children and descendants of the bishop is in Maclean's 'Trigg Minor,' i. 642–53.

[Oliver's Bishops of Exeter, pp. 143–4, 272; Fuller's Worthies, London (Nichols's ed. 1811), ii. 66; Fuller's Church History (Brewer's ed.), bk. x. v. 501; Prince's Worthies (ed. 1701), pp. 222–3; Le Neve's Fasti (Hardy), i. 263, 379–380, 412, 422; Addit. MS. Brit. Museum 5866 f. 202.] W. P. C.

COTTON, WILLIAM (1786–1866), merchant and philanthropist, was the third son of Joseph Cotton [q. v.] He was born at Leyton on 12 Sept. 1786, and was educated at the Chigwell grammar school. Despite an inclination (which recurred more than once during his life) to take holy orders, he entered the counting-house of his father's friend, Charles H. Turner, at the early age of fifteen; and henceforth all his education was self-acquired in the intervals of business. In 1807 he was admitted a partner in the firm of Huddart & Co. at Limehouse, which had been founded a few years earlier by Sir R. Wigram, Captain J. Woolmore, and C. H. Turner, in order to carry out on a large scale Captain Joseph Huddart's ingenious inventions for the manufacture of cordage. Of this business he was soon entrusted with the general management; and as surviving partner he disposed of Huddart's beautiful machinery to the government in 1838. In that year he wrote a memoir of Huddart, with an account of his inventions, which obtained from the Institution of Civil Engineers a Telford medal, and was privately printed in 1855. In 1821 he was first elected a director of the Bank of England, an office that he continued to hold until a few months before his death, having been for many years 'father of the bank.' From 1843 to 1845 he was governor, the usual term of two years being extended to three years, in consideration of his services in connection with the renewal of the charter, which was then being managed by Sir Robert Peel. A permanent memorial of his governorship is preserved in the automatic weighing machine for sovereigns, invented by him, which is still in use,

and bears the name of 'the governor,' having been first introduced in 1844. This machine weighs sovereigns at the rate of twenty-three per minute, and is capable of discriminating to the ten-thousandth part of a grain, discharging the full-weight and the under-weight coins into two different compartments. A prize medal was awarded to Cotton for this machine by the commissioners of the exhibition of 1851.

But though Cotton prospered in business, his chief title to fame is derived from his lifelong devotion to the cause of philanthropy, especially in connection with the church of England in the east of London. Though never a very rich man, the total of his charitable donations would amount to a large sum, for from the first he set apart a tithe of his income for this purpose. But the time, the personal care, and the organising faculty that he bestowed were of far more value than the mere money, and won for him from Bishop Blomfield the honourable title of his 'lay archdeacon.' His earliest philanthropic efforts, as was natural, were on behalf of the men employed by his firm at Limehouse. Here he was the first to break down the vicious practice of paying wages on Saturday evening by orders on a public-house. This practice, it is curious to find, was supported by the difficulty of getting small change during the French war. He took the greatest interest in St. Anne's schools, Limehouse; he was chairman of the committee in 1814 that placed the administration of the London Hospital on its present successful basis; and he was active in building the church of St. Peter's, Stepney, the first example of parochial subdivision by private effort in the east of London.

Henceforth the building of churches became little short of a passion with him. A letter of his to John Bowdler [q. v.], dated 1813, may be regarded as the earliest suggestion of the Incorporated Church Building Society, which dates its actual commencement from a meeting held at the London Tavern in 1818, where his father, Captain Joseph Cotton, was in the chair. Somewhat later he was Bishop Blomfield's most enthusiastic helper in the organisation of the Metropolis Churches Fund, which afterwards developed into the London Diocesan Church Building Society. His own special work in connection with this society was the erection of no less than ten churches in Bethnal Green, the last of which (St. Thomas's) he built and endowed out of his own purse as a memorial of a son he had lost. Yet another church—that of St. Paul's, Stepney, on Bow Common—he built himself, to carry out his principle that ground landlords should thus perform their duty to those who live in their houses. To this church Bishop Blomfield gave on his deathbed the gold communion plate that had been made for Queen Adelaide; and the first incumbent was William Cotton's youngest son.

But his charitable energies were by no means limited to the building of churches. When quite a young man (1811) he was one of the founders of the National Society, formed for establishing schools in which the principles of the church of England should be taught. He was on the original council of King's College, and a governor of Christ's Hospital from 1821. For fifty years he was a member, and for a large portion of that time the treasurer, of the Society for Promoting Christian Knowledge. He was also an active supporter of the Society for the Propagation of the Gospel, the Colonial Bishoprics Fund, the Additional Curates Society, &c. With his friend, Sir H. Dukinfield, the vicar of St. Martin's, he was originator of the system of public baths and washhouses, and he was concerned in the establishment of the first model lodging-houses.

In 1812, William Cotton married Sarah, the only daughter of Thomas Lane. By her he had seven children, one of whom is the present Sir Henry Cotton, lord justice in the court of appeal. From 1819 until his death he lived at Walwood House, Leytonstone. Besides being J.P. and D.L. for the county of Essex, he served the office of sheriff in 1837, and was for many years chairman of quarter sessions at Chelmsford. The university of Oxford conferred upon him the honorary degree of D.C.L. at the commemoration of 1846, and he was also a fellow of the Royal Society. He died on 1 Dec. 1866, and lies buried in the churchyard of St. John the Baptist, Leytonstone, a church which he had himself been largely instrumental in building. A painted window to his memory was placed, by public subscription, in St. Paul's Cathedral.

[Gent. Mag. January 1867, p. 111; Church Builder, January 1867; Guardian, 27 Dec. 1866; personal information.] J. S. C.

COTTON, Sir WILLOUGHBY (1783–1860), general, colonel 32nd light infantry, only son of Admiral Rowland Cotton, a cousin of the first Viscount Combermere, by his wife, daughter of Sir Willoughby Aston, bart., was born in 1783, educated at Rugby School, where he was the leader of a rebellion in November 1797, when the boys burned the head-master's desk and books in the close. On 31 Oct. 1798 he was appointed an en-

sign in the 3rd foot guards, in which he became lieutenant and captain 25 Nov. 1799. He served with his regiment in Hanover in 1805, and as deputy assistant adjutant-general of the reserve, commanded by Sir Arthur Wellesley, in the Copenhagen expedition of 1807, when he was present in the action at Kioge, and was attached in the same capacity to the light division of the Peninsular army under General Crauford in the retreat to Torres Vedras and in the operations on the Coa. Upon his promotion to the rank of captain and lieutenant-colonel, 12 June 1811, he returned home, but rejoined the first battalion of his regiment in 1813, and was present at the battle of Vittoria, commanded the light companies at the passage of the Adour, and the pickets of the second brigade of guards in the repulse of the French sortie from Bayonne. He received the Peninsular medal, with clasps for Busaco, Vittoria, and the Nive. On 17 May 1821 Cotton, then senior captain and lieutenant-colonel 3rd foot guards, and one of the dandies of the brigade, obtained a lieutenant-colonelcy in the 47th foot in India, and on 25 July the same year became brevet-colonel. The 47th followed Sir Archibald Campbell's expedition to Rangoon at the end of 1824, and at the head of a brigade of the army, with the local rank of brigadier-general, Cotton bore a prominent part in the Burmese campaigns of 1825-6, in an unsuccessful attack, made in accordance with orders, on Donabew, at Simbike, and elsewhere, up to the ratification of peace in February 1826, when the British force was within four miles of Ummerapoora. In Burmah Cotton made the acquaintance of the future General Havelock, who became his aide-de-camp, and who in after years dedicated to Cotton his 'Narrative of the War in Afghanistan in 1838-9,' in 'grateful remembrance of his numerous acts of kindness since 1825, when Captain Havelock first served in the same army with him.' In 1828 Cotton exchanged to the 14th foot in Bengal, and was promoted to the rank of major-general 22 July 1830. The same year he was made K.C.H. From 1829 to 1834 he commanded the troops in Jamaica, during which period the island was under martial law from December 1831 to February 1832. In 1838 Cotton, then on the Bengal staff, was appointed to command the Bengal division of the army of the Indus commanded by Sir Henry Fane, and afterwards by Sir John Keane, which entered Afghanistan and captured Ghuznee 23 July 1839, on which occasion he commanded the reserve, which entered the city after the stormers had established themselves therein. In October of the same year he relinquished the command of the Bengal troops, then in camp near Cabul, for a command in the presidency. The same year he was appointed colonel of the 98th foot. In 1838 he was made K.C.B., and in 1840 G.C.B. On 23 Nov. 1841 he became lieutenant-general. From 1847 to 1850 he was commander-in-chief and second member of council in the Bombay presidency. At the outbreak of the Russian war, Cotton, despite his advancing years and unwieldy figure, sought active employment, but without success. On 20 June 1854 he became a general. He was appointed to the colonelcy of the 32nd foot April 1854. In 1806, soon after his return from Hanover, Cotton married Lady Augusta Maria Coventry, eldest daughter of the seventh earl of Coventry; she survived him until 1865 with two children, General Corbet Cotton, and Augusta, widow of Colonel Henry Vaughan Brooke, C.B. Cotton died at his residence in Lowndes Square on 4 May 1860.

COTTRELL. [See COTTERELL.]

COUCH, JONATHAN (1789-1870), naturalist, only child of Richard and Philippa Couch, belonging to a family long resident at Polperro, a small fishing village between Looe and Fowey, on the south coast of Cornwall, was born on 15 March 1789. After receiving a sound classical education in Cornish schools, and some years' pupilage with two local medical men, he entered the united hospitals of Guy's and St. Thomas's in 1808, and in 1809 or early in 1810 returned to Polperro, which he but rarely afterwards quitted, dying on 13 April 1870, aged 81. For sixty years he was the doctor and trusted adviser of the village and neighbourhood, and used with remarkable shrewdness and perseverance the great opportunities afforded to a naturalist at Polperro. He trained in succession a large number of fishermen to aid him in his pursuits, and the observations made at and near Polperro during his lifetime and since his death have not been equalled in value at any British station. He was in correspondence with many of the foremost naturalists, and especially rendered aid to Thomas Bewick and to William Yarrell. Among his local fellow-workers and coadjutors, each of them notable, were C. W. Peach [q. v.], Matthias Dunn, and William Loughrin.

Couch's principal work was done in ichthyo-

logy. In 1835 he obtained a prize offered by Mr. J. Buller of Morval for the best natural history of the pilchard, printed in the third report of the Royal Cornwall Polytechnic Society, and also separately. He had before this given much assistance to Bewick in his 'British Quadrupeds,' as well as in relation to his projected 'Natural History of British Fishes,' and Yarrell was still more indebted to him in his 'British Fishes,' to all three editions of which (1836, 1841, and 1859) Couch was a copious contributor.

His 'Cornish Fauna,' part i. 1838, part ii. 1841, completed by his son Richard Quiller Couch [q. v.] in 1844, was another valuable piece of work. But his magnum opus was 'A History of the Fishes of the British Islands,' with coloured illustrations from his own drawings, 4 vols., London, 1860–5. This is a storehouse of information, carefully collected and sifted, as to the habits of fishes, and in many cases the illustrations give unique representations of the vivid natural colours of fishes while yet alive or immediately after death. A multitude of shorter papers and notes on natural history were contributed by Couch to the 'Imperial Magazine,' edited by his friend Samuel Drew, from 1819 to 1830, the 'Transactions and Proceedings of the Linnean Society,' the 'Magazine of Natural History,' the 'Reports of the Royal Cornwall Polytechnic Society,' the 'Journal of the Royal Institution of Cornwall,' the 'Reports of the British Association,' 'Annals of Natural History,' the 'Transactions of the Penzance Natural History and Antiquarian Society,' the 'Zoologist,' the 'Intellectual Observer,' &c., which are recorded in Boase and Courtney's 'Bibliotheca Cornubiensis,' i. 89–92, and iii. 1138, and in the 'History of Polperro' (a less complete list). He also contributed to 'Land and Water,' under the signature 'Video.'

Couch was an excellent local antiquary, as to words, customs, and remains. The 'History of Polperro,' 1871, issued after his death by his son, T. Q. Couch, is his chief work in this department. His 'Illustrations of Instinct, deduced from the Habits of British Animals,' 1847, is a very interesting book. He translated Pliny's 'Natural History,' with notes, and vols. i. and ii. and parts i. to v. of vol. iii. were published by the Wernerian Club, 1847–50. He left behind him in manuscript 'Notes and Extracts on Subjects of Natural History, and bearing on the ancient condition of the Science,' now in the library of the Royal Institution of Cornwall; 'A Treatise on Dreams;' 'Historical Biographies of Animals known to the Ancients;' 'Materials for a History of the British Cetacea;' 'A Journal of Natural History, being the result of my own observations or derived from living testimony,' 1805–70, 12 vols.; figures of Cornish shells, coloured; 'A Natural History of Cornish Fishes,' with pen-and-ink and coloured figures, 1836, in the library of the Linnean Society. This is the volume employed by Yarrell in his 'British Fishes,' and quoted by him as 'Couch's MSS.' Dr. F. Day published a series of most interesting extracts from Couch's manuscript journals in 'Land and Water' from 11 Aug. 1883 to 29 March 1884.

Couch was a methodist of the Free church. His sincere religious views tinctured much of his writing and influenced his social conduct. The welfare of the fishermen and the prosperity of the fisheries were equally his care. As a local naturalist whose conscientious and loving observation of nature has made a lasting impression on science, he deserves to rank beside Gilbert White.

Couch left three sons by his second wife: Richard Quiller, Thomas Quiller, and John Quiller, who all became surgeons. Thomas practised successfully at Bodmin, and died on 23 Oct. 1884, aged 58. He was a constant contributor to 'Notes and Queries,' two series of his articles, 'The Folklore of a Cornish Village,' 1855 and 1857, being incorporated in the 'History of Polperro,' to which he contributed a sketch of his father's life. He also published lists of local words in the 'Journal of the Royal Institution of Cornwall,' 1864 and 1870, afterwards expanded and included in a 'Glossary of Words in use in Cornwall,' issued by the English Dialect Society in 1880. He did some useful preparatory work in Cornish bibliography, afterwards incorporated in the 'Bibliotheca Cornubiensis' (*Academy*, 1 Nov. 1884, p. 289).

[History of Polperro, 1871; Boase and Courtney's Bibliotheca Cornubiensis, i. 89–92, iii. 1138; Western Morning News, 18 April 1870.]

G. T. B.

COUCH, RICHARD QUILLER (1816–1863), naturalist, eldest son of Jonathan Couch [q. v.], was born at Polperro on 14 March 1816. After receiving a medical education under his father and at Guy's Hospital, London, where he gained several honours and prizes and obtained the ordinary medical qualifications, he returned to Polperro to assist his father, and employed his leisure in careful zoological study. In 1845 he settled in Penzance as a medical practitioner, and in a few years became recognised as an able zoological observer. Within a few weeks of his arrival at Penzance he was elected one of the secretaries

and curators of the Penzance Natural History and Antiquarian Society, and he was for many years its president. His interesting annual addresses and many other papers on zoology by him are published in the 'Transactions' of that society, vols. i. and ii. He contributed the third part (on the zoophytes) to the 'Cornish Fauna,' written by his father; and an account of the natural history of West Cornwall to J. S. Courtney's 'Guide to Penzance,' 1845. Other interesting papers on zoophytes, crustacea, and fishes were contributed by him to the 'Journal of the Royal Institution of Cornwall,' the 'Reports of the Royal Cornwall Polytechnic Society,' the 'Zoologist,' 'Annals of Natural History,' &c., all of which are recorded in Boase and Courtney's 'Bibliotheca Cornubiensis,' i. 92–4, iii. 1138. Among these may be mentioned observations on the zoophytes of Cornwall, on the development of the frog, on the metamorphosis of the decapod crustaceans, and the natural history of the mackerel in the 'Polytechnic Reports' for 1842 and 1844; and on the nest of the fifteen-spined stickleback in the 'Penzance Natural History Transactions,' ii. 79–83. He contributed to Ralfs's 'British Desmidieæ,' 1848, and to Thomas Bell's 'British Stalk-eyed Crustacea,' 1853. Couch was also interested in Cornish geology, and did useful work in developing the difficult subject of Cornish fossil remains. From 1848 onwards he was curator of the Royal Geological Society of Cornwall, and contributed to its 'Transactions' several valuable papers, as well as annual reports. The diseases of the Cornish miners were a subject of his careful investigation, and his papers on the mortality of miners in the 'Polytechnic Reports' (1857–60) are, as far as they go, of permanent value; they were translated into French.

Couch died, in the full vigour of his powers, on 8 May 1863, aged 47, leaving a widow and four children.

[Obit. notices, Cornish Telegraph, 13 May 1863; Western Morning News, 12 May 1863 (by G. Bettany); Gent. Mag. 3rd ser. xv. (1863) 106–8; Hist. of Polperro, 1871, pp. 25–7; Boase and Courtney's Bibl. Cornub. i. 92–4, iii. 1138.] G. T. B.

COUCHE, WILLIAM (1732–1753), scholastic of the Society of Jesus, eldest son of William Couche of Tolfrey, near Fowey, Cornwall, by Anne, daughter of Peter Hoskins of Ibberton, Dorsetshire, was born at Tolfrey on 5 Feb. 1732 (Boase and Courtney, *Bibl. Cornubiensis*, i. 95). He made his humanity studies at St. Omer, and entered the Society of Jesus in 1749, but was prematurely cut off by small-pox at Liège on 23 Feb. 1753 (Oliver, *Jesuit Collections*, 77; Foley, *Records*, vi. 696, vii. 177). He was a promising member of the jesuit order, and died in the odour of sanctity. His life was written by his cousin, Father Ralph Hoskins, under the title of 'De vita, virtutibus et morte Gulielmi Couche,' and is preserved in manuscript at Stonyhurst College (Oliver, *Catholic Religion in Cornwall*, 277: *Notes and Queries*, 4th ser. vi. 112, 145; *Hist. MSS. Comm.* 3rd Rep. 340). Its principal contents have been printed by Brother Foley.

[Authorities cited above.] T. C.

COULSON, WALTER (1794?–1860), lawyer and man of letters, the second son of Thomas Coulson, master painter for many years in the royal dockyard at Devonport (who died in 1845), by Catherine, second daughter of Walter Borlase, surgeon of Penzance, was born at Torpoint in Cornwall, as it is believed, in 1794. His rise is succinctly set forth in the following extract from Jeremy Bentham's life (*Works*, x. 573): 'My brother made acquaintance with the father of the ——s [Coulsons], a man of cleverness and experience, and a head on his shoulders. He got an appointment in one of the dockyards. He had two sons, W—— [Walter] and T—— [Thomas]. I took W—— first, who was with me two or three years. He was forward but cold, yet I once drew tears from his eyes. He became reporter to the "Chronicle," which was his making. T—— was a good boy, who died young' [1813, when aged 22]. Coulson acted as amanuensis to Bentham, and it was no doubt through Bentham's influence that he obtained a place as parliamentary reporter on the staff of the 'Morning Chronicle.' James Mill and Francis Place, the famous Westminster reformer, were among his earliest friends, and the first writings of John Stuart Mill appeared in the 'Traveller' in 1822, then the 'property of the well-known political economist, Colonel Torrens, and under the editorship of an able man, Walter Coulson.' That paper was united with the 'Globe' in 1823, and Coulson was appointed the editor of the dual organ, with the salary of 800*l.* a year and a share of the profits, continuing for some time as the reporter of the 'Chronicle.' When the new venture became successful, he retired from reporting and confined himself to editorship, which he prosecuted with such zeal and ability as to raise his paper to a high pitch of prosperity. He now determined upon studying for the bar, and was duly called at Gray's Inn on 26 Nov. 1828, becoming a Q.C. in July 1851, and a bencher of his inn in November 1851. Con-

veyancing and chancery bar business was the branch to which he wisely, for he was no orator, confined his attention, and in this division of the law he quickly attained to a leading position. By these labours he gained a competency as well as reputation, and was thus enabled, when differences of opinion arose between him and the proprietors of the 'Globe,' to resign the editorship. He was long the parliamentary draughtsman or counsel for the home department, when his labours, though not generally known, were warmly appreciated by the leading politicians of the age. The act for the sale of encumbered estates in Ireland was draughted by him and Lord Romilly, and it is styled by Lord Russell (*Recollections*, pp. 195–6) an admirable tribute to their 'constructive skill.' When the great change in the administration of Indian affairs was effected, the duty of collecting information on its laws and of drawing up a legal code was offered to Coulson, but he loved the social life of London, and preferred to stop at home, even though he acquired wealth less rapidly. He died at North Bank, St. John's Wood, London, on 21 Nov. 1860, and was buried at Kensal Green. His will was proved 14 Dec. 1860, most of his landed property and personalty being left to his brother William [q. v.], the surgeon, for his life, and afterwards to his two nephews. Coulson lived in early life on intimate terms with the chief men of letters in London. At Charles Lamb's evening parties he was a frequent guest, and he enjoyed the reputation, according to Crabb Robinson (*Diary*, i. 488, 506), of being 'a prodigy of knowledge.' Cowden Clarke confirms this opinion, stating that the wits used to tease him with the nickname of 'the giant Cormoran,' in allusion to his Cornish descent, but to dub him also 'the walking Encyclopædia,' as almost boundless in his varied extent of knowledge (*Recollections*, p. 26). He was godfather to Hazlitt's first child, and was an occasional guest at the critic's house in York Street, Westminster (W. C. Hazlitt, *Life of Hazlitt*, p. 26). Leigh Hunt was another of Coulson's friends, and through Hunt he was introduced to Procter. Hunt calls him 'the admirable Coulson.' Procter says that although ordinarily grave Coulson was good in 'comic imitations,' but that the 'vis comica left him for the most part in later life' (Procter, *Autobiog.* 136, 196). Barham, of the 'Ingoldsby Legends,' and Thomas Love Peacock wrote in his paper through their friendship with him, and he was one of James Mill's associates in his Sunday walks. Coulson is said to have contributed to the 'Edinburgh Review' a review of Mill's 'History of India,' and when the 'Parliamentary History and Review' was started about 1825 with the object of publishing the debates in a classified form he wrote an article 'of great merit.' In June 1821 he was elected a member of the Political Economy Club, and from 1823 to 1858 brought forward at its meetings numerous questions for discussion, and he was placed on the royal commission for the exhibition of 1851, when he took an active part in its proceedings. It was in a cottage on Coulson's Kentish estate near Maidstone that John Black, the editor of the 'Morning Chronicle,' lived from 1843 to 1855.

W. P. C.

COULSON, WILLIAM (1802–1877), surgeon, younger son of Thomas Coulson, master painter in Devonport dockyard, was born at Penzance in 1802. Walter Coulson [q. v.] was an elder brother. His father was an intimate friend of Sir Humphry Davy; his mother was Catherine Borlase. After receiving some classical education at the local grammar school, Coulson spent two years in Brittany (1816–18), and became proficient in the French language and literature. Having first been apprenticed to a Penzance surgeon, he entered as a pupil at Grainger's School of Anatomy in the Borough, and attended St. Thomas's Hospital, where he became dresser to Tyrrell. Here, about the time when the 'Lancet' was first published in 1823, Coulson attracted Mr. Wakley's attention, and was at once accepted as a contributor, and afterwards regularly engaged on the staff of the 'Lancet.' From 1824 to 1826 he studied in Berlin, supplying the 'Edinburgh Medical and Surgical Journal' with foreign correspondence, and making the friendship of the poet Campbell under circumstances highly honourable to both (see *Campbell's Life* by Beattie, ii. 448). After some months' stay in Paris, Coulson returned to London and became a member of the Royal College of Surgeons on 26 Sept. 1826. He at once joined in the establishment of the Aldersgate Street School of Medicine with Tyrrell, Lawrence, and others, and acted for three years as demonstrator of anatomy. At the same time he superintended the foreign department of the 'Lancet,' and made many translations from foreign works. In 1828 he was elected surgeon to the Aldersgate Street Dispensary,

and in 1830 consulting surgeon to the City of London Lying-in Hospital. His investigations on puerperal affections of the joints in connection with the latter did much to improve the knowledge of their nature and pathology. They were published in the second edition of his work on 'Diseases of the Hip Joint.' In 1832 he, with his colleagues, resigned his connection with the Aldersgate Dispensary in consequence of the committee maintaining the practice of 'virtually putting up for sale all the most efficient offices of the charity' (CLUTTERBUCK, *Memoir of G. Birkbeck, M.D.*, 1842, p. 9; *Lancet*, ii. 1832–3, 477, 790, 821). In the same year he joined the medical board of the Royal Sea-bathing Infirmary at Margate, of which he long continued an active member. In 1833 he failed to secure election to an assistant-surgeoncy at the London Hospital, being beaten by Mr. T. B. Curling. Coulson's practice rapidly increased with his various publications, which, commencing in 1827 with a translation and notes to Milne-Edwards's 'Surgical Anatomy,' and a second edition of Lawrence's translation of Blumenbach's 'Comparative Anatomy,' became more and more original in their character, and culminated in those on the bladder and lithotrity. He was also a valued contributor and adviser in connection with the cyclopædia and other publications of the Useful Knowledge Society (see C. KNIGHT, *Passages of a Working Life*, cited below). He removed from his early residence in Charterhouse Square to a house in Frederick's Place, Old Jewry, where he commanded for many years perhaps the largest city practice. He was elected among the first batch of fellows of the College of Surgeons in 1843, became a member of the council in 1851, and in 1861 delivered the Hunterian oration. When St. Mary's Hospital, Paddington, was established, Coulson was elected senior surgeon. Besides being a specialist and successful operator in diseases of the bladder, Coulson undertook a large proportion of more strictly medical cases. Combining successful practice with good finance, and the inheritance of his brother Walter's fortune, he accumulated one of the largest fortunes ever made in practice, viz. a quarter of a million. He married in 1840 Miss Maria Bartram, notable for her skill in painting as well as her attractive manners and great intelligence. She died on 4 Jan. 1876, and was followed by her husband on 5 May 1877.

Coulson was noteworthy for more than his surgical skill. A liberal, a disciple of Carlyle, Maurice, and Stuart Mill; a friend of Barham, Francis Newman, and other leading literary men; of sufficient individuality among such men to leave a distinct impress, he had large subjective powers, and ruled in the circle in which he moved. Possessing an inflexible will and indomitable perseverance, he was occasionally rigid, stern, and intolerant. His active sympathy was easily aroused, and his efforts to relieve the oppressed never abated. Rest to him was little more than a myth' (*Lancet*, 19 May 1877). He was marked by a strong belief in individuality, in duty, and in the fulfilment of promises. He was tall and vigorous-looking, his face late in life showing deep furrows along the sides of the mouth and around the chin.

Coulson's principal works are: 1. 'On Deformities of the Chest,' 1836; 2nd edit. 1837, enlarged, with numerous plates. 2. 'On Diseases of the Hip Joint,' 4to, 1837; 2nd edit. 8vo, 1841. 3. 'On Diseases of the Bladder and Prostate Gland,' 8vo, 1838; 2nd edit. enlarged, with plates, 1840; 6th edit. 1865. 4. 'On Lithotrity and Lithotomy,' 8vo, 1853. 5. 'Lectures on Diseases of the Joints,' 8vo, 1854. Coulson also contributed the articles 'Lithotomy' and 'Lithotrity' to Cooper's 'Practical Surgery,' edited by Lane (1861–1872), and wrote for W. B. Costello's 'Cyclopædia of Practical Surgery,' 1841–3.

H. Barham, 1870, ii. 205–6, 220; Beattie's Life of T. Campbell, 1849, ii. 448–52; Charles Knight's Passages of a Working Life, 1873, ii. 129.] G. T. B.

COULTON, DAVID TREVENA (1810–1857), journalist and miscellaneous writer, a grandson of the Rev. J. Coulton, was born at Devizes, Wiltshire, in 1810. His father died during his early childhood. Owing to delicate health he was educated under a private tutor. At an early age he began to contribute both poetry and prose to the periodicals, and in 1839 he founded the 'Britannia' newspaper, the aim of which was to extend and popularise the principles of conservatism, and to uphold national protestantism as embodied in the institutions of the realm. As a journalist, while a close reasoner, he possessed considerable skill in the popular exposition of complex questions. In 1847 he withdrew from active journalism, and having in 1850 sold the 'Britannia' he settled at Goudhurst, Kent, where he took to farming, occasionally contributing to the 'Quarterly Review.' He published an 'Inquiry into the Authorship of the Letters of Junius,' and in 1853 a novel entitled 'Fortune, a story of London Life.' Yielding to the solicitation

of friends, he undertook in 1854 to edit the 'Press.' His recreation was mechanics, and he planned an atmospheric railway. He died of bronchitis at Brighton 8 May 1857.

COUPER. [See also COOPER and COWPER.]

COUPER, ROBERT, M.D. (1750–1818), Scottish poet, son of a farmer at Balsier, parish of Sorbie, Wigtonshire, was born 22 Sept. 1750. He entered the university of Glasgow in 1769 with the view of studying for the ministry of the church of Scotland, but, his parents having died before he had completed his studies, he accepted the office of tutor in a family in Virginia, America. On the outbreak of the American revolution in 1776 he returned to Scotland, and after studying medicine at the university of Glasgow began practice at Newton Stewart, Wigtonshire. In 1788 he settled in Fochabers, Banffshire, as physician to the Duke of Gordon. In 1804 he published at Inverary, in two volumes, 'Poetry chiefly in the Scottish Language,' dedicated to the Duke of Gordon, the first volume mainly consisting of poems on the seasons, and the second of odes and songs. Among the best known of his songs are 'Red gleams the Sun,' tune 'Neil Gow,' inserted in his own works under the title 'Kinrara;' and 'The Ewebughts, Marion.' He left Fochabers in 1806, and died at Wigton, 18 Jan. 1818.

COUPERIE, ALBERT ÉTIENNE JEAN BAPTISTE TERRIEN DE LA (*d.* 1894), orientalist. [See TERRIEN.]

COURAYER, PIERRE FRANÇOIS LE (1681–1776), French divine, was born at Rouen on 17 Nov. 1681. His father was president of the court of justice of that city. Having been educated at Vernon and Beauvais, he joined the fraternity of St. Genevieve. In 1706 he was made presbyter of the congregation, and in 1711 librarian. He had published several small works on literary subjects when, in 1714, he became one of the appellants against the bull 'Unigenitus,' which condemned the Jansenists. He took this step simply from love of justice, as he himself in no way favoured the Jansenist opinions. These appellants obtained the name of anti-constitutionaries, or the opposers of the papal constitution. The famous Cardinal de Noailles at one time belonged to them, as did all the most prominent doctors of the Sorbonne. The strife between them and the constitutionist party was long and bitter. It was in the course of this strife that friendly relations were established between Wake, archbishop of Canterbury, and the Sorbonne doctors, Du Pin and Girardin. Negotiations were set on foot as to a possible union between the Anglican and Gallican churches. Courayer thus came to know somewhat of the real position of the Anglican church, and formed a friendship with Archbishop Wake which was of lifelong duration. With the archbishop's help he studied the question of the validity of Anglican orders; but he had not determined to write anything on the subject until circumstances seemed to compel him. The Abbé Renaudot, famous for his oriental learning, had published a memoir on Anglican orders, in a book set forth by the Abbé Gould in 1720, entitled 'The True Faith of the Catholic Church.' This memoir was full of misstatements, and it excited Courayer to give to the world a truer account of the subject. 'The thing in question,' he says, 'is no less than to know whether the church of England, formerly so illustrious, and even now so respectable for the enlightenment of her prelates and the condition of her clergy, is without a succession, without a hierarchy, and without a ministry.' Courayer does not altogether accept the position of the Anglican church, but he defends the validity of its orders in a most masterly manner. By the valuable help of Archbishop Wake he was able to avoid the mistakes as to the English church into which foreign divines were so apt to fall. The jesuit party, knowing of the composition and character of the work, used every effort to prevent its publication. To diminish Courayer's responsibility, his friends stole the manuscript from him, and it appeared in 1723 with the name of a Brussels publisher, but without the author's name. This, however, was soon known, and then Courayer was subjected to the most violent attacks, both from jesuits and Jansenists. The most remarkable assault was that made by the Abbé Hardouin—that erratic genius who wrote to prove that almost all the classical writings were forgeries. A more formidable antagonist was the Dominican, Le Quien. Another was a French-Irishman, one Fennel, whose book, as Courayer complains, was written in 'French-Irish.' Against these manifold antagonists Courayer wrote his 'Defence,' which appeared in 1726, published by the same Brussels publisher. It was a larger work than the first, being printed in three volumes. Replies were at once forth-

coming, and these Courayer answered in his 'Historical Relation,' published in 1729. Before this last work appeared Courayer had been obliged to fly from France and take refuge in England. At an assembly of twenty bishops, with the Cardinal de Bissy at their head, held at the abbey of St. Germain near Paris, Courayer's works were formally condemned, and soon after were suppressed by authority. He was threatened with excommunication if he did not retract; but his great desire was to answer the misstatements made against him. This he could not do in France, and he began to meditate flight. At this moment Bishop Atterbury, then living in exile in Paris, strongly encouraged him to fly to England, and gave him valuable assistance in arranging for his journey. Atterbury had long been Courayer's warm admirer. His picture ornamented Atterbury's rooms, and the bishop had been able to procure for him from Oxford the honour of a D.D. *honoris causâ* (1727). The timid scholar and recluse would probably never have found his way to our shores had not the bishop furnished him with a capable English attendant. As it was, he reached Greenwich in safety in January 1728. The greatest interest had been excited about him in England. Lord Percival sent his coach and six to convey him to his house, which he desired Courayer to regard as his own, and made him a handsome present. Archbishop Wake received him the next day at Lambeth with the utmost cordiality, and also made him a present. He was followed in this by Bishops Hare, Sherlock, and others. Lord Blandford sent him 50*l.* Courayer became the lion of the day. Sometimes he stayed with his aristocratic friends for six months at a time. His manners were charming, his vivacity unflagging. He never pretended to be converted to the Anglican church, though he occasionally attended its services. He obtained a pension of 100*l.* a year from the government. At Oxford he delivered a Latin oration in the theatre with unbounded applause. Queen Caroline made him a favoured member of her learned coterie. Courayer now (1736) published a French translation of Father Paul's 'History of the Council of Trent,' with valuable notes. The previous French translation of this great work was very unsatisfactory. Courayer's was altogether an admirable work, and its sale was very rapid. He purchased with the profits made by the sale an annuity of 100*l.*, which, together with his pension, made him a rich man, his wants being of the simplest description. He remitted money to his nun-sisters in France, and, it is said, gave as much as 50*l.* or 60*l.* annually to the poor prisoners. He was in the habit of spending one evening weekly at court with the queen and princesses, when the king would often make one of the party. Lady Mary Wortley Montagu has given a humorous description of him in his lodgings over a toyshop in Holborn, attired in a flowered dressing-gown and a cap with a gold band. In 1744 he published at Amsterdam an 'Examination of the Defects of Theology,' &c., in which he began to show the rationalising spirit which is apparent in his later writings. At the age of eighty-two he published a translation of Sleidan's 'History of the Reformation,' a copy of which he presented to the university of Oxford, together with his picture which had belonged to Atterbury, but which, at the bishop's death, had come into his hands. The picture, still to be seen at Oxford, bears the motto, 'Quocunque duxit veritas ausus sequi,' which well represents the spirit of Courayer's writings. Two treatises which he left at his death to the Princess Amelia, but which were afterwards published ('Declarations as to my latest Opinions,' 1787; 'A Treatise on the Divinity of Jesus Christ,' 1810), have brought on him the charge of Socinianism, and his life has been written by a Socinian biographer. There is no reason, however, to suppose that Courayer departed from the orthodox faith, though his speculations are very bold. According to Milner's 'Life of Bishop Challoner' (1798, p. 28), Courayer to the last maintained that 'he was in the bosom of the catholic church, and that he had been guilty of no crime whatever, and therefore was accustomed to present himself in the catholic chapels which he frequented, at the altar, in order to receive the holy communion; but our zealous prelate was inflexible in requiring a retractation of his errors as public as his profession of them had been, and likewise his return to religious obedience, before he would admit him to the participation of the sacraments, and by his orders Father Courayer was always publicly passed over by the officiating priest when he presented himself among others at the altar rail.' He died at his lodgings in Spring Gardens on 17 Oct. 1776, at the age of ninety-five, and was buried in the cloisters of Westminster Abbey, where a Latin inscription, from the pen of Mr. Kynaston of Brasenose, records the chief facts of his life and the virtues of his character. In his will he declares himself to die a true member of the catholic church, but without approving many of the superstitions which have been introduced into it. The fact of his never having adopted the Anglican position gives an additional value to his great work on Anglican orders, as coming from an impartial outsider; and

Courayer's services to the church of England must be ranked very high. His statements have been severely tested, but have been found extremely accurate. The book on Anglican orders was badly translated by Daniel Williams, a nonjuring clergyman living in France, but has been excellently edited by an Oxford divine (1844). Williams also translated the 'Defence' in 1728.

[Courayer's Dissertation on the Validity of the Ordinations of the English, with Account of the Writer, Oxford, 1844; Works of Archbishop Bramhall, vol. iii. Oxford, 1842; Histoire du Concile de Trente, trad. par Courayer, 3 vols. 4to. Amsterdam, 1751; Letters of Lady M. Wortley Montagu, 3 vols. 8vo. London, 1837.]

G. G. P.

COURCI, JOHN DE (*d.* 1219?), conqueror of Ulster, was a soldier of fortune, whose parentage is a problem as yet, it would seem, unsolved. He was certainly one of the well-known house of that name established in Oxfordshire and Somersetshire, for he appears with a Jordan de Courci (probably his brother) as a witness to a grant by William de Courci (a royal dapifer) to St. Andrew of Stoke (*Hist. MSS. Comm.* 9th Rep. app. i. p. 353 *b*), which foundation the De Courcis had bestowed on the abbey of Lonlay in Normandy. On this abbey he subsequently bestowed his own foundation of St. Andrew of Ardes, a further proof of the connection, as is also his association with Guarine FitzGerald (see below). It has been pretended by Lodge (*Peerage of Ireland*) and those who have followed him that John was the son and heir of this William de Courci (who died 1176). But as Alice, daughter of William (and wife of Guarine FitzGerald), is known to have been his heiress, this is impossible. He may have been a natural son of William, or a nephew, or merely a kinsman.

Whatever his origin, the facts of his life have been lost in a maze of legend, and it is now a matter of difficulty to sift the true from the false. His first appearance in history is in the Norman-French poem assigned (but in error) to Mathew Regan, where he is represented (lines 2733–6) as receiving in Ireland from Henry II (1172) a license to conquer Ulster; this, however, is scarcely consistent with the version given by Giraldus (*Expugnatio Hiberniæ*). According to this, John de Courci was one of three leaders, with ten knights apiece, who were despatched to Ireland by Henry on hearing of Strongbow's death, as an escort to William FitzAldelm, whom he entrusted with plenary powers (cap. xv.) The expedition sailed in December 1176, and within a month of his landing De Courci, with twenty-two knights and some three hundred followers, had set out from Dublin on his daring raid to conquer the kingdom of Ulster (cap. xvii.) Giraldus implies that John and his comrades acted in this on their own impulse, chafing at their enforced inaction under William FitzAldelm's rule. In the 'Gesta Regis Henrici,' indeed, he is stated to have forbidden the attempt (BEN. ABBAS, i. 137). It was the depth of winter when they sallied forth, but by a forced march they traversed the distance (some hundred miles) so rapidly as to burst upon Down on the fourth day, and to seize it by a *coup-de-main*. Down (now Downpatrick) was the capital of the land, and had the additional advantage of resting on the sea, so that the Normans had secured a maritime base. The Irish, stunned by the suddenness of the blow, had fled, carrying their king with them, and the adventurers were at length revelling in plunder. The cardinal Vivian now appeared upon the scene, and endeavoured, but in vain, to restore peace. The men of Ulster, thirsting for revenge, soon rallied, and headed by their king made a desperate effort to recover their stronghold. John sallied forth to meet them in the open, and swept them before him in headlong rout. He distinguished himself among his fellows by deeds of Homeric valour: 'nunc caput ab humeris, nunc arma a corpore, nunc brachia separabat' (cap. xvii.) Giraldus presents us with an animated sketch of the young and victorious adventurer: 'Tunc impletum est illud Celidonii [Merlin]: "Miles albus albo residens equo aves in clipeo gerens Ultoniam hostili invasione primus intrabit." Erat enim Johannes plus quam flavus, et in albedinem vergens, album forte tunc equum equitans, et pictas in clipeo aquilas præferens . . . miles animosus audacter ingreditur. . . . Erat itaque Johannes vir albus et procerus membris nervosis et ossosis, staturæ grandis, et corpore prævalido; viribus immensis, audacia singulari; vir fortis et bellator ab adolescentiâ; semper in acie primus, semper gravioris periculi pondus arripiens. Adeo belli cupidus et ardens ut, militi dux præfectus, ducali plerumque desertâ constantiâ, ducem exuens et militem induens, inter primos impetuosus et præceps, turma vacillante suorum, nimiâ vincendi cupidine victoriam amisisse videretur, et quanquam in armis immoderatus et plus militis quam ducis habens, inermis tamen modestus ac sobrius et ecclesiæ Christi debitam reverentiam præstans; divino cultui per omnia deditus, gratiæque supernæ, quoties ei successerat, cum gratiarum actione totum ascribens Deoque dans gloriam quoties aliquid fecerit gloriosum.' He tells us, moreover, that this 'white warrior,

seated upon a white horse,' carried about with him on his conquering progress certain prophecies of Columba, in which he claimed it was foretold.

After his victory at Down, De Courci pushed his conquests with varying success for some years, fighting no fewer than five battles, the fifth of them 'apud pontem Iuori' (identified by O'Donovan with Newry Bridge) 'in reditu ab Angliâ.' Eventually he obtained a substantial hold on Ulster (*Ulidia*), or, more correctly, on the province of Uladh, the district bounded by the Newry and the Bann, and now comprising Down and Antrim. In accordance with the unvarying Norman practice he secured his hold upon the land by building castles as he advanced, and in these he placed his followers and his kinsmen, who, as his 'barones' or feudal tenants, became known as 'the barons of Ulster.' In their midst he kept at Down his own feudal court. His marriage (about 1180) with a daughter of Godred, king of Man (*Chronicle of Man*), brought him within the circle of the reigning houses, and he is accordingly spoken of by Roger of Hoveden (iv. 25) as 'prince of the kingdom of Ulster,' and similarly by his panegyrist, Jocelin the monk, as 'Joannes de Cursi, Ulidiæ Princeps' (*Prologus Jocelini in vitam S. Patricii*). It was while he thus reigned at Down that he replaced the secular canons of its abbey by monks from St. Werburgh's, Chester, and placed it under the patronage of St. Patrick (in the place of the Holy Trinity), for whom he professed a fervent adoration.

On the failure of John's expedition to Ireland (1185) recourse was had to John de Courci, and the island placed in his charge. He accordingly witnesses three charters as 'justiciar' (*Cartulary of St. Mary's Abbey, Dublin*, i. 125, ii. 4, 21). It is always stated that on the accession of Richard he was displaced in favour of Hugh de Lacy; but this is not so, for one of these documents is demonstrably of Richard's reign. By his expression elsewhere, 'dum eallirus fui domini mei comitis' (*ib.* ii. 12), he appears to imply that in this reign he acted as deputy for John (Count of Mortain). So obscure is Irish history for these years that for a while he is almost lost to view. We gather, however, that like his fellows he took part in the terrible struggles for the succession between the sons of Roderic O'Connor, and was on one occasion signally defeated by the allied forces of the Irish chieftains while attempting to invade Connaught. In 1193 his wife, Affreca, founded the beautiful 'Grey Abbey' for Cistercian monks on Strangford Lough, and four years later (1197) his brother Jordan was slain by a native retainer, his death being furiously avenged by John himself upon the natives (Roc. Hov. iv. 25).

Though the records available for the following reign enable us closely to follow his career, it is difficult to explain their opening allusion (4 Sept. 1199) to his having in some way acted with W. De Lacy 'ad terram nostram Hiberniæ destruendam' (*Obl.* 1 John, m. 16 *dors.*) It would seem that, whatever their offence had been, William de Lacy made his peace, and thenceforth proved his loyalty to the crown by becoming the enemy of John de Courci, who refused to 'come in' and defied its power. We accordingly find that the following year (1200) he succeeded with his brother, by a treacherous invitation, in making John his prisoner (Roc. Hov. iv. 176). But this attempt (which probably suggested the legendary tale of his capture at Downpatrick in 1203) was foiled by the loyalty of his adherents, who at once rose and rescued him. Meanwhile his small estate in England (the only hold which the crown had on him) was forfeited (*Rot. Canc.* 3 John). Our next glimpse of the struggle is in 1203, when Hugh de Lacy (who had charge of Meath during his brother's absence in England) raided into Ulster, attacked John, beat him out of Down, and 'banished' him from the province (*Annals of Four Masters, Clonmacnois*, and *Loch Cé*). He failed, however, in his main object, that of securing John's person. The royal offer (21 Sept.) of a safe-conduct (*Pat.* 5 John, m. 6) failed to lure him from his retreat, and on the return of the invading force he was soon back in Down.

But in the spring (1204) Hugh de Lacy returned to the attack, and this time with complete success. The forces of Ulster were utterly defeated and John himself taken prisoner (*Annals of Loch Cé*, i. 135; *Chronicle of Man*). It is to this battle that reference is made in the grant of Ulster to Hugh de Lacy (29 May 1205), 'as John de Curcy held it on the day when Hugh conquered and took him prisoner in the field' (*Cart.* 7 John, m. 12). So erroneous are the histories of this warfare that Mr. Gilbert represents this battle as a victory for John de Courci (*Viceroys*, p. 61). Meanwhile John had secured his release (*Chronicle of Man*), whether, as implied by the 'Annals of Loch Cé' (but the passage is obscure), by submitting to take the cross, or, as distinctly asserted in the records, by swearing to submit to the crown, and giving hostages as a pledge for his doing so ('sic se venturum [in servitium nostrum] juravit et unâ obsides suos dedit'). A list of these hostages is preserved in the Patent Rolls (*Pat.* 1 John, m. 6 *dors.*), and, though assigned in both the official calendars to 1205, is not later

than 15 July 1204. This further confirms the date of the decisive battle. On 31 Aug. (1204) the justiciar (Meiller FitzHenry) and Walter de Lacy, his assessor, were ordered to insist on his promised surrender under pain of total forfeiture (*Pat.* 6 John, m. 9), and the next day 'the barons of Ulster' were ordered to produce their lord as they valued their sons (his hostages) and their lands (*ib.*) It may be gathered, however, from the 'Irish Annals' (*Four Masters*; *Clonmacnois*) that John sought refuge with the Cenel-Eoghain in Tyrone, and that the safe-conduct offered him (*Pat.* 6 John, m. 7) in the autumn (21 Oct. 1204) failed to procure his surrender, for the De Lacys were duly assigned (13 Nov.) their share of his forfeited lands, and his hostages were still detained.

After lurking, however, for a while in Tyrone he appears to have changed his mind and accepted a safe-conduct (12 Feb. 1205) to the king (*ib.* m. 4), his submission being rewarded by the restoration of his small English estate (*Claus.* 7 John, m. 26). But his rival, Hugh de Lacy, followed him to court (March 1205), and obtaining a grant of the whole of Ulster (2 May), together with the title of earl (29 May), returned to Ireland in triumph (*ib.* mm. 22, 24). John at once flew to arms, and his English estate was again (22 May) seized and delivered to Warine FitzGerald (*ib.* m. 26). By the help of his brother-in-law, Ragnvald, king of Man (whom he had himself assisted some years before), he was soon at the head of a pirate fleet, recruited from the Norsemen of the isles. Landing at Strangford the allied chieftains feebly besieged the castle of 'Rath,' ravaging and plundering the country round till Walter de Lacy, arriving with his forces, scattered their host in utter rout, and John, after intriguing with the native tribes, fled finally from the scene of his triumphs (*Annals of Loch Cé*; *Chronicle of Man*). There would seem to be in the English records a solitary and incidental allusion to this attempt (*Fin.* 9 John, m. 12).

It is not till the close of 1207 that John reappears to view. He was then apparently with his native allies, for he received (14 Nov. 1207) a license (*Pat.* 9 John, m. 4) to come to England and stay with his friends ('moretur cum amicis'), the king engaging not to expel him without forty days' notice. After this glimpse of him he again disappears till 1210, when he is found not only in favour with John, but even a pensioned courtier. The 'Prestita and Liberate Rolls' now frequently record his name, and he even accompanies John to Ireland (June 1210), where he is employed by him on several matters, and is despatched from Carrickfergus to Galloway to bring back with him the family of William de Braose (*Liber Niger*, p. 382). John's pension of 100*l.* a year enables us to trace his name in the records for some time longer, and on 30 Aug. 1213 the justiciar of Ireland is ordered to provide his wife Affreca with some land 'unde possit sustentari' (*Claus.* 15 John, pars 2, m. 7). Of himself we have a glimpse in letters of commendation for 'John de Courci' and his comrades, 20 June 1216 (*Pat.* 18 John, m. 7), and again in a writ to the sheriff of Yorks and Lincoln, to give him seisin of his lands, in November 1217 (*Claus.* 2 Hen. III, m. 15 *dors.*) It would seem that this is the last occasion on which he is referred to as alive; but there is in later years an incidental allusion (*ib.* 35 Hen. III, m. 1) to his having been 'ever faithful' to Henry and to his father, which probably implies that in the struggle with the barons he had embraced the royalist side. We may infer that he died shortly before 22 Sept. 1219, for on that day the justiciar of Ireland was ordered to provide his widow with her lawful dower (*ib.* 3 Hen. III, pars 2, m. 2). She was buried (*Chronicle of Man*) in her own Grey Abbey (dedicated to St. Mary 'de Jugo Dei'), where 'the remains of her effigy, carved in stone, with hands clasped in prayer, were in the last century to be seen in an arch of the wall on the gospel side of the high altar' (*Viceroys*, p. 63). The conqueror of Ulster was bountiful to the church. In addition to his Benedictine priory at Ardes, and his benefactions to Down Abbey, he founded the priories of Neddrum and Toberglory, both in Ulster, the former as a cell to St. Bees, the latter to St. Mary of Carlisle, also Innis Abbey on the isle of Innis Courcy (*Mon. Angl.*)

John de Courci is usually stated to have died in 1210; this, which is taken from his legendary history, is but one of the strange misstatements which disfigure his received history. Another of these is the assertion that he was created earl of Ulster. This is repeated, it would seem, by all, even by the best, authorities, including Mr. Bagwell (*Encyc. Brit.*), Mr. Gilbert (*Viceroys of Ireland*), Mr. Walpole (*History of Ireland*), Mr. O'Connor (*History of the Irish People*), the 'Liber Munerum,' &c. &c., Mr. Lynch adding (*Feudal Dignities of Ireland*) that 'the grant made on that occasion does not seem to have been enrolled' (p. 145). It is, however, certain that this title was the invention of a late chronicler, and that it first appears in the 'Book of Howth,' where we read of 'Sir John Courcey, earl and president [*sic*] of Ulster.'

So also with John's issue. We have the positive statement of Giraldus himself that

he had no legitimate issue. Yet Munch holds that the 'Affreca' who laid claim to Man in 1293 was 'no doubt' his granddaughter (*Chronicle of Man*, p. 136), and peerage-writers, following Lodge, have assigned him a son Miles, from whom, by a grossly fictitious pedigree, they have derived the Lords Kinsale.

The well-known tale of his great exploit, as given in Fuller's 'Worthies,' and reproduced in Burke's 'Peerage,' is that by which he is best known; but it first appears in the 'Book of Howth' and in the Laud MS. (15th cent.) of the 'Annals of Ireland' (*Cartulary of St. Mary's*, ii. cxx), and is certainly a sheer fiction. It is pretended that the privilege of remaining covered before the sovereign was conferred upon John and his heirs in memory of this exploit; but this is an even later addition to the legend, and one of the earliest allusions to 'the offensive hat' is found in a letter of George Montagu, who so describes it to Horace Walpole in 1762 (*Hist. MSS. Comm.* 8th Rep. App. ii. 115 *a*).

[For fuller details see the papers by the writer on 'John de Courci' (Antiquarian Magazine and Bibliographer, vols. iii–iv.), and on the Book of Howth (Antiquary, vols. vii–viii.) O'Donovan); Regan's Anglo-Norman Poem on the Conquest of Ireland (ed. Michel); Dugdale's Monasticon Anglicanum; and Hearne's Liber Niger. The other authorities referred to are the Reports of the Historical MSS. Commission; the Ulster Journal of Archæology; Gilbert's Viceroys of Ireland; and Lynch's View of the Feudal Dignities of Ireland.] J. H. R.

COURTEN or **CURTEENE**, SIR WILLIAM (1572–1636), merchant, was the son of William Courten, by his wife Margaret Casiere, and was born in London in 1572. A younger brother, born in 1581, was named Peter. Their father was son of a tailor of Menin and a protestant. After enduring much persecution at the hands of the Spaniards, he escaped to England in 1568; his wife, a daughter Margaret, and her husband Michael Boudean accompanied him. The refugees at first set up a manufactory of French hoods in Abchurch Lane, London, but afterwards removed to Pudding Lane, where they traded in silk and linen. The son-in-law, Boudean, soon died, leaving a son Peter, and the daughter married a second husband, John Moncy, an English merchant. The father and mother apparently lived till the close of Elizabeth's reign.

At an early age Courten was sent to Haerlem, as factor to his father's firm, and the younger brother, Peter, went to Cologne. At Haerlem, William married the deaf and dumb daughter of Peter Cromling, a Dutch merchant there, who brought him 60,000*l.* About 1600 William returned to London, and Peter remained as his agent in Holland, but paid his brother frequent visits. In 1606 the two brothers entered into partnership with their brother-in-law Moncy to continue and extend the elder Courten's silk and linen business. William contributed half the capital. In 1619 proceedings were taken in the Star-chamber against Courten, Burlamacchi, and other foreign merchants settled in England, for exporting gold, and a fine of 20,000*l.* was levied on Courten. The firm (Courten & Moncy) prospered, and it was estimated in 1631 that the capital amounted to 150,000*l.* The prominence of the brothers in the city secured each of them the honour of knighthood. William was knighted 31 May 1622, and Peter 22 Feb. 1622–3. William's operations were not confined to his London business: he built ships and traded to Guinea, Portugal, Spain, and the West Indies. His fleet at one time numbered twenty vessels, with nearly five thousand sailors on board. About 1624 one of his ships discovered an uninhabited island, to which Courten gave the name of Barbadoes. It seems that his agents in Zealand had suggested to him the expedition. With a view to profiting to the fullest extent by his discovery, he petitioned in 1625 for the grant of all unknown land in the south part of the world, which he called 'Terra Australis Incognita.' In the same year he sent out a few colonists to the islands, and on 25 Feb. 1627–8 received letters-patent formally legalising the colonisation (*Sloane MS.* 2441; LIGON, *Hist. of Barbadoes*). The grant was addressed to 'the Earl of Pembroke in trust for Sir William Courten.' Courten, in accordance with the deed, began colonisation on a large scale. He sent two ships with 1850 persons on board to Barbadoes, under Captain Powel, who, on his arrival, was nominated governor by Courten and the Earl of Pembroke; but the speculation proved disastrous. Three years later James Hay, earl of Carlisle, disputed this grant, claiming, under deeds dated 2 July 1627 and 7 April 1628, to be owner of all the Caribbee islands lying

between ten and twenty degrees of latitude. In 1629 Carlisle sent two ships, with Colonel Roydon and Captain Hawley as his commissioners, to take possession of the island. On their arrival they imprisoned Captain Powel, and established Lord Carlisle's authority. The islands remained in Carlisle's hands till 1646, when the lease of them was transferred to Lord Willoughby of Parham. Courten claimed to have lost 44,000*l.* by these transactions, and left his descendants to claim compensation. In many of his speculations Sir Paul Pindar was associated with Courten, and they lent money freely to James I and Charles I. Their joint loans ultimately amounted to 200,000*l.* Failure to obtain any consideration for these heavy loans was the subject of much subsequent litigation.

Losses of ships and merchandise sustained at the hands of the Dutch in the East Indies, after the massacre at Amboyna (1624), combined with the injustice he suffered in the Barbadoes to injure Courten's credit at the opening of Charles I's reign. In 1631 the death of his brother Peter, his agent at Middelburg, increased his difficulties. Sir Peter died unmarried, and left his nephew Peter Boudean, who was then settled in Holland, a legacy of 10,000*l.* Boudean had quarrelled with his uncle William, and used every unscrupulous means to injure him. To satisfy his claim on the estate of Sir Peter, Boudean now seized the whole property of the firm of Courten & Moncy in Holland. The death of Moncy in 1632 further complicated matters. Courten was one of Moncy's executors, and Peter Boudean, his stepson, was the other. But the latter declined to administer the estate. Courten at once took action at law to recover his share of the estates of his brother and his partner; the proceedings dragged on long after his death. In spite, however, of these troubles, Courten was still enormously wealthy. In 1628 he paid Charles I 5,000*l.* and received lands in Whittlewood Forest, Northamptonshire. In 1633 he owned land in England, chiefly in Northamptonshire, which produced 6,500*l.* a year, besides possessing a capital of 128,000*l.* His love of maritime enterprise was still vigorous. In the last years of his life he again opened up trade with the East Indies, and sent two ships (the Dragon and Katherine) to trade with China. The ships never arrived at their destination, and the consequent loss was Courten's deathblow. He died at the end of May or beginning of June 1636, and was buried in the church of St. Andrew Hubbard. Two elegies on his death appear in 'MS. Lansd.,' xcviii. 23. He left many legacies to charitable institutions in his will; but his joint claims with Sir Paul Pindar on the crown, and his claims on his nephew and on Lord Carlisle, were unsettled at the time of his death.

Courten had a son, PETER, by his first wife, who was made a baronet by James I in 1622; married Jane, daughter of Sir John Stanhope, and died without issue early in 1625 (*Cal. State Papers*, 1623–5, p. 508). He is usually described as of Aldington, Northamptonshire. Courten's second wife was a daughter of Moses Tryon, and by her he had a son, William, and three daughters, Hester (wife of Sir Edward Littleton); Mary (wife of the Earl of Kent); Anna (wife (1) of Essex Devereux, esq., and (2) of Richard Knightly). WILLIAM, the younger, found his father's estate seriously embarrassed by the proceedings of his cousin Peter Boudean, who declined to surrender any of the Dutch property. Complicated litigation continued. Courten married Catharine Egerton, daughter of John, first earl of Bridgewater; and, resolving to carry on his father's business, chartered with his father-in-law's aid, two vessels (Bona Esperanza and Henry Bonaventura) for trade in the East Indies. In this enterprise nearly all his money was invested, and the ships with their cargoes were seized by the Dutch in 1641. The Earl of Bridgewater declined to assist Courten further; the disturbed state of the government rendered any help from that quarter out of the question; and in 1643 bankruptcy followed. Courten's landed estates were alienated to his brother-in-law, the Earl of Kent, and he himself retired to Italy. His wife endeavoured in vain to come to terms with Peter Boudean, and finally joined her husband, who died intestate at Florence in 1655. Two children, William [q. v.] and Katharine, survived him. The former endeavoured to recover some of his father's property, and in 1660 Charles II granted to George Carew, who had been associated in business with Sir William Courten, power to administer the estates of Sir William and his son. Proceedings were also begun in Holland against the Dutch East India Company for compensation for the ships lost in 1641; the English courts of law and parliament were constantly petitioned for redress until the end of the century, but the greater part of the enormous wealth of Sir William Courten never reached his descendants. In August 1660 the privy council heard evidence in support of the claims of Courten's grandson to the ownership of the Barbadoes, but did not deem the proof sufficient. In 1677 petitions to the council and parliament rehearsed the loans of Courten and Sir Paul Pindar to Charles I, but repayment was never ordered. George Carew is-

sued many tracts on the subject, but public interest was not excited.

[A very full account of Courten is given in the Biog. Brit. (Kippis), chiefly drawn from Sloane MSS. in the British Museum. The Calendars of State Papers (Domestic and Colonial) for the reigns of James I and Charles I supply a few additional details. Besides numerous petitions for redress to the English privy council and to the East India Company of the Netherlands, and accounts of Sir William Courten's commercial misfortunes, published in Charles II's reign, chiefly from the pen of George Carew, there appeared in 1681 a pamphlet entitled 'Hinc illæ Lacrymæ; or an Epitome of the Life and Death of Sir William Courten and Sir P. Pindar,' by Carew; and in 1683 'Vox Veritatis, or a brief Extract of the Case of Sir William Courten,' by Thomas Brown of Westminster. Other accounts of the litigation are to be found in Addit. MS. 28957, f. 116; and Egerton MS. 2395, f. 602.] S. L.

COURTEN, WILLIAM (1642–1702), naturalist, grandson of Sir William Courten [q. v.], and son of William Courten, who died insolvent at Florence in 1655, was born in London on 28 March 1642. His mother was Catharine Egerton, daughter of John, first earl of Bridgewater. Courten seems to have had a good education. He travelled to Montpelier and there fell in with Tournefort and Sloane. It was here that he began his botanic studies. In 1663 he left to attend to his private affairs at home, probably on his attaining his majority. He lived in England till 1670 with his aunt, Lady Knightly, at Fawsley Lodge, Northamptonshire. After this he went abroad again for fourteen years. Much doubt hangs over his movements, but he is supposed to have spent some of the time at Montpelier. He was a close friend of William Sherard, afterwards consul at Smyrna and benefactor to the chair of botany at Oxford, other friends being Dr. Tancred Robinson, Martin Lister, Plukenet, Ilwyd the antiquary, and Sloane. During many years he lived under the assumed name of Charleton, and in 1684 he opened a suite of rooms in the Temple containing his museum, estimated then to be worth 50,000*l*. Sloane succeeded to this splendid collection, which forms no small part of the original foundation of the British Museum treasures. His dried plants are now at the Natural History Museum in Cromwell Road. Courten died at Kensington on 29 March 1702, and was buried there, with an epitaph written by Sir Hans Sloane. His name is perpetuated in *Courtenia*, a genus founded by Robert Brown upon a plant from Java.

COURTENAY. [See also COURTNEY.]

COURTENAY, EDWARD, EARL OF DEVONSHIRE (1526?–1556), born about 1526, was only son of Henry Courtenay [q. v.], marquis of Exeter and earl of Devonshire, by his second wife, Gertrude. With his father and mother he was imprisoned in the Tower in November 1538, at the age of twelve; was attainted in 1539; was specially excepted from Edward VI's amnesty in 1547, and was not released till 3 Aug. 1553, after an incarceration of nearly fifteen years. The greater part of his imprisonment was spent in solitary confinement, his father having been executed soon after his arrest, and his mother released. Queen Mary showed him much favour on her accession. He was created Earl of Devonshire on 3 Sept. 1553, and knight of the Bath on 29 Sept. At the coronation he carried the sword of state, 1 Oct. 1553, and he was formally restored in blood on 10 Oct. He received the Spanish ambassadors on their arrival in London on 2 Jan. 1553–4, and acted as special commissioner for the trial of Sir Robert Dudley on 19 Jan. 1553–4. But Courtenay was encouraged to seek higher dignities. Although Queen Mary affected to treat him as a child, ordering him to accept no invitations to dinner without her permission, she regarded him with real affection, and Bishop Gardiner led him to hope for her hand in marriage. Elated with this prospect he maintained a princely household, and induced many courtiers to kneel in his presence. The projected match was popular with the people, but the offer of Philip II proved superior in Mary's eyes. Princess Elizabeth was, on the other hand, not blind to Courtenay's attractions, and he was urged to propose marriage to Elizabeth as soon as Mary showed herself indifferent to him. The national hatred of the Spaniard, it was openly suggested, would soon serve to place Elizabeth and Courtenay on the throne in Mary and Philip's place. At the end of 1553 a plot with this object was fully matured, and Devonshire and Cornwall were fully prepared to give Courtenay active support. Wyatt joined in the conspiracy, and undertook to raise Kent. In March 1553–4 Wyatt's rebellion was suppressed and its ramifications known. Courtenay was sent back to the Tower and in May removed to Fotheringay. At Easter 1555 he was released on parole and exiled. He travelled to Brussels, whence he begged permission to return home in November 1555 to pay his respects to his mother and the queen, but this request was refused. He then proceeded to Padua, where he died suddenly and was buried in September 1556.

Peter Vannes, the English resident at Venice, sent Queen Mary an interesting account of his death. At the time some discontented Englishmen in France were urging him to return and renew the struggle with Mary and Philip in England. His handsome face and figure were highly commended. Noailles, the French ambassador, styled him 'le plus beau et plus agréable gentilhomme d'Angleterre,' and Michel de Castelnau stated that 'il estoit l'un des plus beaux entre les jeunes seigneurs de son age' (*Mémoires*, p. 74). But his prison education had not endowed him with any marks of good breeding, and there can be no doubt that his release from his long confinement was followed by very dissolute conduct.

Courtenay employed some of his leisure in the Tower by translating into English from Italian a work entitled 'Trattato utilissimo del Beneficio di Giesu Christo, crocifisso, verso i Christiani,' written about 1543 by Antonio della Paglia, commonly called Aonio Paleario. It was deemed to be an apology for the reformed doctrines, and was proscribed in Italy. Courtenay translated it under the title of 'The Benefit of Christ's Death' in 1548, apparently with a view to conciliating Edward VI, and dedicated it to Anne Seymour, duchess of Somerset. The manuscript is now in the Cambridge University Library, to which it was presented in 1840, and contains two autographs of Edward VI. It was printed for the first time in 1856 by Mr. Churchill Babington in a volume which also contained reprints of the original Italian edition (1543) and of a French translation issued in 1551.

With Edward Courtenay the earldom of Devon or Devonshire in the family of Courtenay became dormant, but a collateral branch claimed the title in 1831, and the claim was allowed by the House of Lords. The title of Earl of Devon is now borne by William Reginald Courtenay of Powderham Castle, Exeter.

State Papers (Dom.), 1547–80; Wood's Letters of Illustrious Ladies, vol. iii.; Froude's Hist.; Lingard's Hist.] S. L.

COURTENAY, HENRY, Marquis of Exeter and Earl of Devonshire (1496?–1538), born about 1496, was son of Sir William Courtenay, by Princess Catharine, youngest daughter of Edward IV. His grandfather, Edward Courtenay, was on 26 Oct. 1485 created Earl of Devonshire by Henry VII; was granted at the same time very large estates in Devonshire; was made knight of the Garter in 1490; resisted Perkin Warbeck's attack on Exeter in 1497; and dying 1 March 1509, was buried at Tiverton. The earl was grandnephew of another Edward Courtenay, earl of Devonshire (1357–1419), earl marshal in 1385, but this earldom had been forfeited by Edward IV, in the person of Thomas Courtenay (great-grandson of the elder Edward Courtenay), who fought with the Lancastrians at Towton, and was slain at Tewkesbury (1461).

Henry Courtenay's father, Sir William Courtenay, was in high favour at the court of Henry VII in the lifetime of his wife's sister, Queen Elizabeth, and is praised for his bravery and manly bearing by Polydore Vergil. In 1487 he became knight of the Bath. There is a letter from him describing his father's and his own repulse of Warbeck at Exeter in Ellis's 'Original Letters,' 1st ser. i. 36. But on the queen's death in 1503, the king, fearing that Courtenay's near relationship to the throne might tempt him to conspiracy, committed him to the Tower on an obscure charge of corresponding with Edmund de la Pole, earl of Suffolk, the surviving chief of the Yorkist faction. Attainder followed. On Henry VIII's accession in 1509 he was released from prison, and carried the sword at his coronation. On 10 May 1511 he was allowed to succeed to his father's earldom; but the formalities for restoring him in blood were not completed before his death on 9 June 1511. He was buried in Blackfriars Church. His wife, the Princess Catharine, died 15 Nov. 1527, and was buried at Tiverton.

The boy Henry was treated kindly by his first cousin, Henry VIII; was allowed to succeed to his father's earldom in 1511, and the attainder was formally removed in the following year. He took part in the naval campaign with France in 1513, when about seventeen years old, as second captain of a man-of-war, and in 1520 was made both a privy councillor (May) and gentleman of the privy chamber (July). On 15 April 1521 he was created K.G. in the place of the Duke of Buckingham, who was tried and convicted of treason in May of the same year, and the lordship of Caliland, Cornwall, together with a mansion in St. Lawrence Pountney, formerly Buckingham's property, was conferred on him at the same time. Courtenay attended Henry VIII at Calais, at the Field of the Cloth of Gold, in 1521, and took part in the tournaments. The keepership of Birling manor, the stewardries of Winkeley, Gloucestershire, and of the duchies of Exeter, Somerset, and Cornwall

were granted him in 1522 and 1523. In April 1525 he became constable of Windsor Castle, and on 18 June following Marquis of Exeter. In August of the same year Courtenay went to France as the king's envoy to negotiate an alliance, and to secure the release of Francis I, taken prisoner by Spain at the battle of Pavia. On his return in September the king appointed him the privy councillor to be in immediate attendance on him, and on 17 May 1528 he was nominated lieutenant of the order of the Garter. Throughout the proceedings for the divorce of Queen Catherine of Aragon Courtenay actively aided the king; he subscribed the articles against Wolsey (1529), signed the letter to Clement VII demanding the divorce in 1531, and acted as commissioner for the deposition of Catherine in 1533. When the suppression of the monasteries was imminent in 1535, Exeter was made steward of very many abbeys and priories in the western counties, where he was also acting as commissioner of array (6 Oct. 1534). At the king's request he also acted as commissioner at the trial of Anne Boleyn two years later, and was sent to Yorkshire with the Duke of Norfolk in October 1536, in order to aid in the suppression of the Pilgrimage of Grace. But he hurriedly retired from the north to Devonshire. A rebellion under Lord Darcy broke out in Somersetshire in 1537, and Exeter was ordered to act as lord steward at Darcy's trial.

Courtenay's power in the west of England had now become supreme, and he assumed a very independent attitude to Henry's minister, Cromwell, whom he cordially disliked. As the grandson of Edward IV, he had a certain claim to the throne, and his wealth and intimacy with the Yorkist Poles and the Nevilles readily enabled Cromwell to point him out to the king as a danger to the succession. Of the character of his first wife, Elizabeth, daughter of John Grey, viscount Lisle, by whom he had no issue, nothing is known. But his second wife, GERTRUDE, daughter of William Blount, fourth lord Mountjoy [q. v.], by whom he had a son Edward [q. v.], was a devout catholic; had supported the agitation of Elizabeth Barton [q. v.], and had visited her shrine at Canterbury. In 1533, when Barton was executed, the marchioness had begged the king to pardon the intimacy (WOOD, *Letters*, ii. 96–101). She was godmother to the Princess Elizabeth in the same year, and carried Prince Edward at his christening in 1537; but her decided views in favour of the Roman catholic religion and her affection for Queen Catherine, with whom she corresponded after the divorce, gave additional ground for the suspicions with which her husband was regarded as soon as Cromwell had become his avowed enemy. Gradually information was collected in Devonshire and Cornwall to justify a prosecution for treason. At St. Keverne, Cornwall, a painted banner had been made which was to be carried round the villages, rousing the men to rebel against the crown in order to declare Courtenay heir-apparent to the throne, at any rate in the west of England. Reginald Pole, the cardinal, was found to be in repeated communication with Courtenay. Pole's brother, Sir Geoffrey, turned traitor, and came to London to announce that a conspiracy was hatching on the lines of the Pilgrimage of Grace. Early in November 1538 Courtenay, his wife, and son were committed to the Tower. On 3 Dec. Courtenay was tried by his peers in Westminster Hall. Evidence as to the marquis's treasonable conversation with Sir Geoffrey Pole was alone adduced; but he was condemned and beheaded on Tower Hill 9 Dec. 1538. A week later he was proclaimed a convicted traitor, and guilty of compassing the king's death. His wife and son were kept in prison, and were attainted in July 1539. The marchioness for a time had for her companion Margaret Pole, countess of Salisbury (mother of Cardinal Pole), who was beheaded 27 May 1541, and the distressed condition of these two ladies was made the subject of a petition from their gaoler to the king in 1540. Subsequently the king pardoned the marchioness, and she was released. The Princess Mary was always her friend: in 1543 Mary sent her a puncheon of wine, and other presents were interchanged between them for many years afterwards. On Mary's accession to the throne she became a lady-in-waiting; her attainder was removed, and she took part in the coronation and all court ceremonies. She died on 25 Sept. 1558, and was buried at Wimborne. Her extant letters to her son Edward [q. v.] show her in a very attractive light.

[Dugdale's Baronage; Burke's Extinct and Dormant Peerage; Wriothesley's Chronicle (Camd. Soc.); Herbert's Life of Henry VIII; Gairdner and Brewer's Letters and Papers of Henry VIII; Polydore Vergil's Hist. (Camd. Soc.); Doyle's Official Baronage; Froude's Hist.; Madden's Privy Purse Expenses of Princess Mary; Wood's Letters of Illustrious Ladies.] S. L.

COURTENAY, HENRY REGINALD (1741–1803), bishop of Exeter, was the eldest surviving son of Henry Reginald Courtenay, M.P., who married Catherine, daughter of Allen, first earl Bathurst. He was born in the parish of St. James, Piccadilly, 27 Dec.

1741, and admitted at Westminster School in 1755, proceeding thence in 1759 to Christ Church, Oxford, where he took the degrees of B.A. 1763, M.A. 1766, and D.C.L. 1774. Having taken orders in the English church, some valuable preferments speedily fell to his lot. The rectory of Lee in Kent and the second prebendal stall in Rochester Cathedral were conferred upon him in 1773. In the following year he was appointed to the valuable rectory of St. George, Hanover Square, when he vacated his stall at Rochester; but he was one of the prebendaries of Exeter from 1772 to 1794, and he retained the fourth prebend at Rochester from 1783 to 1797. Early in 1794 he was nominated to the poor bishopric of Bristol (his consecration taking place on 11 May), and after three years' occupancy of that preferment was translated to the more lucrative see of Exeter (March 1797), holding the archdeaconry of Exeter *in commendam* from that year until his death, and retaining as long as he lived his rich London rectory. He died in Lower Grosvenor Street, London, 9 June 1803, and was buried in the cemetery of Grosvenor Chapel. His wife, Elizabeth, eldest daughter of Thomas Howard, second earl of Effingham, whom he married in January 1774, lived till 31 Oct. 1815. They had two sons and four daughters. The elder son, William, sometime clerk-assistant of the parliament, became in 1835 the eleventh earl of Devon; the younger son, Thomas Peregrine, is separately noticed. A letter from the bishop to the Rev. Richard Polwhele is printed in the latter's 'Traditions and Recollections,' ii. 536-7. Courtenay was stiff and reserved in social intercourse, but his letters were frank and unreserved. Several of his sermons for charities and on state occasions were printed between 1795 and 1802. His charge to the clergy of Bristol diocese at his primary visitation was printed in 1796, and that delivered to the clergy of the diocese of Exeter on the corresponding occasion was published in 1799.

[Nichols's Literary Anecdotes, ix. 158, 184; Le Neve's Fasti (Hardy), i. 221, 383, 397, 430, 432, ii. 584, 586; Oliver's Bishops of Exeter, 165, 274; Gent. Mag. 1803, pt. i. 602; Burke's Peerage; Welch's Alumni Westmon. (1852), 362, 366, 372, 410.] W. P. C.

COURTENAY, JOHN (1741-1816), politician, son of William Courtenay, by Lady Jane Stuart, second daughter of the Earl of Bute, was born in Ireland in 1741. He entered political life under the auspices of Viscount Townshend, who, while lord-lieutenant of Ireland, 1767-1772, made him his private secretary. In this capacity he accompanied Townshend to the ordnance office in 1772. As Townshend's nominee he was returned to parliament in 1780 as member for Tamworth. In 1783 Townshend appointed him surveyor-general of the ordnance. This vacated his seat, but he was re-elected (23 April). In parliament he spoke much and with considerable effect. In a speech of elaborate irony he supported, while feigning to oppose, Fox's bill for the repeal of Lord Hardwicke's Marriage Act in 1781; he advocated the renunciation of the right of legislation on Irish matters in 1782; and spoke in favour of Fox's India Bill in 1783. He retained his seat for Tamworth at the election of May 1784. In a debate on navy bills in this year (6 Aug.) he somewhat startled the house by apostrophising Rose, the secretary to the treasury, who was conspicuous by his silence when he ought to have been defending the government, in the lines:—

> Quid lates dudum, Rosa? Delicatum
> Effer e terris caput, o tepentis
> Filia cœli.

Rose being ignorant of the Latin tongue did not reply. In 1785 a proposal to levy a tax on domestic servants furnished him with the occasion for a very humorous speech. He opposed Pitt's Irish commercial policy, averring that if carried out it would be equivalent to a re-enactment of Poynings's act. He supported the proceedings against Hastings in a speech which, according to Wraxall, stood 'alone in the annals of the House of Commons, exhibiting a violation of every form or principle which have always been held sacred within those halls. The insult offered to Lord Hood at its commencement (referring to his services as a spectator of Lord Rodney's glorious victory of 12 April 1782) became eclipsed in the studied indecorum of the allusions that followed, reflecting on the personal infirmities or the licentious productions of the member for Middlesex (Wilkes). His invectives against Hastings, however violent, might seem to derive some justification from the example held out by Burke, Sheridan, and Francis, but the insinuation levelled at the king (of having taken bribes from Hastings) with which Courtenay concluded, and the mention of the *bulse*, unquestionably demanded the interference of the chair' (*Post. Mem.* ii. 312). For the insult to Hood Courtenay afterwards apologised. Courtenay gave a steady support to Wilberforce in his efforts to arouse the public conscience to a sense of the iniquity of the slave trade, opposed the suspension of the habeas corpus in 1794, and gave an ironical support to the 'bill for the better observation of Sunday' (1795). He

lost his seat for Tamworth at the election of 1796, but was returned for Appleby. He voted with the minority in favour of the reform of the House of Commons in 1797, and opposed the renewal of the 'Habeas Corpus Suspension Act in 1798. In 1802 he ironically opposed the bill for putting down bull-baiting. In 1806 he was appointed commissioner of the treasury. Unseated in 1807, he was returned again for Appleby in 1812, but accepted the Chiltern Hundreds the same year. He died on 24 March 1816. In his speeches Courtenay, who appears to have been well read in both classical and modern literature, was fond of quoting Locke, Montesquieu, Rousseau, and other philosophers, as well as the poets. He expressed ardent sympathy with the French revolutionists. Of his various literary productions, none of which are of great merit, the following are the principal: 1. 'Select Essays from the Batchelor, or Speculations of Jeffry Wagstaffe, esq., Dublin,' 1772, 12mo. 2. 'The Rape of Pomona; an elegiac epistle,' 1773, 4to. 3. 'Poetical Review of the Literary and Moral Character of Dr. Samuel Johnson,' 1786, 4to. 4. 'Philosophical Reflections on the late Revolution in France,' 1790, 8vo (an ironical letter addressed to Dr. Priestley, which went through three editions). 5. 'Poetical and Philosophical Essay on the French Revolution addressed to Mr. Burke,' 1793, 8vo. 6. 'The Present State of the Manners, Arts, and Politics of France and Italy, in a series of Poetical Epistles from Paris, Rome, and Naples, in 1792 and 1793,' London, 1794, second edition revised and augmented same year. 7. An elegy on the death of his son prefixed to an edition of his poems, 1795, 8vo. 8. 'Characteristic Sketches of some of the most distinguished Speakers in the House of Commons since 1780,' 1808, 8vo. 9. 'Verses addressed to H.R.H. the Prince Regent,' 1811, 8vo. 10. 'Elegiac Verses to the memory of Lady E. Loftus,' 1811, 8vo.

J. M. R.

COURTENAY, PETER (*d.* 1492), bishop successively of Exeter and Winchester, was the third son of Sir Philip Courtenay of Powderham, and his wife Elizabeth, daughter of Walter, lord Hungerford. Sir Philip (*d.* 1463) was the heir of his uncle, Richard Courtenay, bishop of Norwich [q. v.], and, though representing a younger branch of his illustrious family, a man of considerable wealth (see the list of his manors in *Cal. Inquis. post mortem*, 3 Edw. IV, iv. 322). Peter prosecuted his studies at Oxford and in Italy, where it is said he became a doctor of both laws at Padua. At Oxford he became a member of the local foundation of Exeter College (Wood, *Colleges and Halls*, p. 109). In 1457, being then a student of civil law, he obtained a dispensation from the university, relieving him from some of the statutable residence and exercises required before admission to read 'in the institutes' (Anstey, *Munimenta Academica*, Rolls Ser., pp. 744–5). He had already resided three years in the faculty of arts, and the same time in that of civil law. On his admission as bachelor of laws he 'kept great entertainment for the academicians and burghers' (Wood, *Hist. and Antiq. of Oxford*, i. 66, ed. Gutch; cf. *Mun. Ac.* p. 745). He afterwards became a doctor. His rank secured him rapid preferment. In 1453 he was made rector of Moreton Hampstead and archdeacon of Exeter (Le Neve, i. 395). In 1463 he became prebendary of Lincoln (*ib.* ii. 124, 221). In 1464 he was also appointed archdeacon of Wiltshire (*ib.* ii. 630). He was master of St. Anthony's Hospital, London (Godwin, *De Præsulibus* (1743), p. 414). In 1476-7 he was made dean of Windsor, and in 1477 dean of Exeter. On 5 Sept. 1478 he was appointed by papal provision bishop of Exeter; on 3 Nov. his temporalities were restored (*Fœdera*, xii. 945), and on 8 Nov. he was consecrated, by license from the archbishop, by Bishop Kemp of London, at St. Stephen's Chapel, Westminster (Le Neve, i. 376). As bishop he showed a good deal of activity in building. He completed the north tower of his cathedral at his own cost, and put in it a great bell, still called Peter's bell, and a curious clock showing the state of the moon and the day of the month. He also built the tower of Honiton church, besides largely assisting in the erection of the church itself. Courtenay also took considerable part in politics. Of a Yorkist family and in the service of Edward IV, he even acquiesced in the revolution which made Richard III king, and was present at the house of the Duchess of York when Richard gave the great seal to John, bishop of Lincoln (*Fœdera*, xii. 189). He joined, however, the party of Buckingham, and in conjunction with his kinsmen, Edward Courtenay of Boconnock and Walter Courtenay of Exeter, and many others of the western gentry, endeavoured in vain to excite a rising in Devon-

shire and Cornwall (POLYDORE VERGIL, p. 551, ed. 1570, and HALL, p. 393, ed. 1809, erroneously call Edward the bishop's brother). On their failure they escaped to Brittany to share the exile of Henry of Richmond. Spared his life with Bishops Morton and Wydville out of consideration for their office, Courtenay was condemned in Richard III's parliament to lose his temporalities and estates (*Rot. Parl.* vi. 250). He returned to England with Henry VII, and received from that monarch great favours to compensate for his sufferings in his cause. Edward Courtenay was made Earl of Devon. Peter was put on the commission which was to perform the duties of seneschal at Henry's coronation (*Fœdera*, xii. 277); received the custody of the temporalities and the disposal of the preferment of the Yorkist bishop of Salisbury (CAMPBELL, i. 81), and on 8 Sept. was appointed keeper of the privy seal with a salary of twenty shillings a day (*ib.* i. 151). He was present at the first parliament of Henry VII, where the sentences of Richard's time against him and his confederates were reversed (*Rot. Parl.* vi. 273), and where he served as a trier of petitions of Gascony and other places beyond sea (*ib.* 268 *a*). In 1486 he was appointed a commissioner of the royal mines and placed with the Earl of Devon and others on a commission to inquire into the seizure of certain Hanse ships by the men of Fowey, contrary to the existing amity (CAMPBELL, i. 315, 316). On the death of William of Waynfleet he received the grant of the temporalities of Winchester (*Fœdera*, xii. 322), and on 29 Jan. 1487 was translated to that important see by papal bull (LE NEVE, iii. 15–16). He now ceased to be privy seal, but was still a good deal engaged on state affairs. In 1488 he was one of the commissioners appointed to muster archers in Hampshire for the expedition to Brittany (CAMPBELL, ii. 385), and in 1489 was put on a special commission of the peace for Surrey (*ib.* ii. 478). He received as a gift from the king 'a robe made of sanguine cloth in grain, furred with pure menever, gross menever, and byse' (*ib.* ii. 497). He was a witness to the creation of Arthur as prince of Wales in 1490 (*ib.* ii. 542), and was present at the ratification of the treaty with Spain in the same year (*Fœdera*, xii. 428). An unsuccessful attempt was made in 1487 to appoint him chancellor of Oxford, against John Russell, bishop of Lincoln (WOOD, *Fasti Oxonienses*, ed. Gutch, p. 65). He died on 23 Sept. 1492, and was probably buried at Winchester, though the exact spot is uncertain, and local writers have conjectured his tomb to be at Powderham.

T. F. T.

COURTENAY, RICHARD (*d.* 1415), bishop of Norwich, was the son of Sir Philip Courtenay of Powderham Castle, Devonshire, where, it is said, he was born. His mother was Anne, daughter of Sir Thomas Wake of Bisworth. He was the grandson, therefore, of Hugh Courtenay, second earl of Devon, and of Margaret Bohun, the granddaughter of Edward I, and connected by marriage with Henry of Lancaster, afterwards King Henry IV. His uncle was William Courtenay, archbishop of Canterbury [q.v.], who superintended his education, and speaks of him in his will as 'filius et alumnus meus.' On his death in 1397 the archbishop left Richard a hundred marks, a number of books in case he should become a clerk, and his best mitre if he should become a bishop (*Anglia Sacra*, i. 416). Though apparently the eldest son, such patronage may well have inclined him for a clerical career. He became a member of the new western foundation of Exeter College, Oxford, a doctor of civil and canon law, and, though mostly resident at Oxford, obtained a large number of ecclesiastical preferments elsewhere. In 1394 he received the prebend of Sneating in St. Paul's, and also a prebend in Lincoln. In 1400 he became precentor of Chichester (*ib.* i. 265). In 1401 he was made prebendary of Tame in the cathedral of Lincoln (*ib.* ii. 221). Between 1402 and 1404 he was dean of St. Asaph (*ib.* i. 82). In 1403 has was chosen prebendary of North Newbald in York Minster (*ib.* iii. 203). In 1410 he became archdeacon of Northampton, and in the same year dean of Wells (*ib.* i. 152, ii. 57; *Anglia Sacra*, i. 589). In 1406 he succeeded, on his father's death, to the family possessions (COLLINS, *Peerage*, vi. 254, ed. 1779, from Inq. post mortem 7 Henry IV). Courtenay soon obtained a great position at Oxford. But even when chancellor of that university—an office he first attained in 1407—he was employed elsewhere, also on very different business. He early won, and preserved till his death, the close confidence and friendship of Henry of Monmouth. In 1407 he accompanied the Prince of Wales in his

expedition against the Welsh insurgents. When the garrison of Aberystwith Castle, and the 'new town of Llanbadarn' which it protected, made a conditional submission, he administered to them an oath on the Eucharist that they would absolutely surrender if not relieved before 1 Nov. (RYMER, *Fœdera*, viii. 497, original ed. The royal letter, *ib.* 419, is put in the wrong year). If we may believe a late authority, Courtenay was present at the martyrdom of the Lollard Badby (1410), when the Prince of Wales played so deplorable a part (FABYAN, p. 574, ed. Ellis). Before December 1410 he became chancellor of Oxford for the second time (*Munimenta Academica*, pp. 248-9). In 1411 he, with the proctors Brent and Byrch, headed a strong opposition to Archbishop Arundel, who, in his zeal against Wycliffites, proposed to hold a metropolitical visitation of the university. Arundel had already made a similar attempt in 1397, but had been obliged to content himself with a barren victory in the law courts. In 1411 Courtenay again pleaded the bull which on the former occasion the university had obtained from Boniface IX exempting it from all episcopal jurdisdiction. The archbishop and his magnificent train were rudely repelled from the city, and violent disputes ensued. It was ultimately agreed by both parties to submit the question to the king's judgment. On 17 Sept. Henry IV decided at Lambeth in favour of Arundel, and renewed an ordinance of Richard II, which had already decided against the scholars. The university, however, was not yet beaten. The royal order that Courtenay should be replaced by the 'cancellarius natus,' the senior doctor of divinity, was sullenly complied with. But many masters ceased their lectures; and when the king, fearing that the university would empty, bade them choose a new chancellor and proctors, they, in direct violation of his orders, re-elected Courtenay, Brent, and Byrch. The parliament which met on 1 Nov. ratified and enrolled the royal ordinance at Arundel's petition (*Rot. Parl.* iii. 651-2). Arundel procured from John XXIII a bull reversing that of Boniface IX. At last the intervention of the Prince of Wales put an end to the struggle. But the university suffered a complete defeat. Courtenay, who never seems to have forfeited the royal favour, obtained from the king the gift of a great gilt cross to the university, in recompense for which an annual mass was directed to be said before the masters on the king's behalf, while a similar service was offered for the prince in return for his mediation. Arundel was convinced that the scholars were no longer favourers of heresy by the transmission to him of a decree of the university against 267 erroneous opinions of Wycliffe (*MS. Cotton*, Faustina C. vii. 138 *b*). Courtenay, the friend of the Prince of Wales, could never have been of doubtful orthodoxy.

A large number of entries in the 'books of the chancellor and proctors,' printed by Anstey, attest Courtenay's activity at the head of the university. His crowning achievement was completing the library which Bishop Cobham had given to the university, drawing up rules for its organisation and regulation, increasing its size, and appointing a librarian or chaplain. The university recognised his services by allowing him free access to the library, whenever it was daylight, for the rest of his life, a privilege only allowed in other cases to the actual chancellor (*Munim. Academ.* 261–9; WOOD, *Annals*, i. 547–50). Among those stirred up by Courtenay's energy to present books to the university library were the king, the archbishop, the Prince of Wales and his brothers, including Humphrey, who was afterwards to carry out the work of Cobham and Courtenay on so noble a scale. In 1412 Courtenay's name appears for the last time as chancellor. Affairs of state entirely occupied the remainder of his life. He became a member of the royal council, and was commissioned with others to treat with the Burgundian ambassadors for the projected marriage of the Prince of Wales and Anne, daughter of Duke John, which was to be the basis of a close alliance between the two states (*Fœdera*, viii. 721). He also conducted some researches among the archives with reference to Flanders and to the relations of the English and Scottish crowns (*Kalendars and Inventories of Exchequer*, ii. 82). On Henry V's accession he became treasurer of the royal household and custodian of the king's jewels. In September 1413 he was appointed, by papal provision, bishop of Norwich (*Fœdera*, ix. 50), and, immediately receiving the royal confirmation and the restitution of his temporalities, was consecrated by Archbishop Arundel at the royal chapel at Windsor, on 17 Sept. (STUBBS, *Registrum Sacrum Anglicanum*, p. 63). But affairs of state prevented him from ever seeing his diocese, where John Leicester, archbishop of Smyrna, who had already acted as suffragan for Bishops Spencer and Tottington, lived in his palace and performed all his ordinations and diocesan work (JESSOPP, *Diocesan Hist. of Norwich*, pp. 140, 235). On 31 May 1414 he was sent, with the bishop of Durham, at the head of a great embassy for treating with 'our adversary of France' (*Fœdera*, ix. 132). The embassy set out in great state, was lodged sumptuously at Paris, in the Temple, but

could not avert the war, as the French were not yet willing to accept the English terms (see for the embassy WAURIN, *Chroniques*, 1399–1422, p. 164). Courtenay was absent between 10 July and 3 Oct. (*Fœdera*, ix. 190). Later in the year the same ambassadors went on a second mission, and on 24 Jan. 1415 signed at Paris a prolongation of the truce (*ib.* ix. 199). On his way to France he got the hangman at Calais into great trouble by persuading him to cut the cord which suspended a dead felon sentenced to be hanged as long as the cord endured (*ib.* ix. 195). On his return his denunciation of some special French treachery excited Henry's anger and hastened the outbreak of the war (WALSINGHAM, ii. 301. His accounts and expenses as ambassador are in Add. MS. 24513, f. 68). During the next arduous months Courtenay was much occupied in raising money for the French expedition on the security of the royal jewels (see many instances in *Fœdera*, ix. and *Kal. and Inv. of Exchequer*, ii.) On 24 July Henry made his will at Southampton, and made Courtenay one of his executors (*Fœdera*, ix. 293). On 11 Aug. he left England with Henry for Harfleur, and continued in attendance on the king during the siege of that town until on 10 Sept. he was attacked by the dysentery that was already ravaging the English army. On Sunday, 15 Sept., he died in the king's presence. Henry, who was much affected at his loss, ordered the body to be conveyed to Westminster, where it found an honourable tomb in the Confessor's chapel, behind the high altar of the abbey.

The chaplain of Henry V, who commemorates his exploits, speaks of Courtenay as one of the dearest friends and most trusted counsellors of the king. He commends his noble birth, his lofty stature, his ability, his culture, and his eloquence (*Gesta Hen. V*, p. 27). The monk of Norwich repeats the same praises (*Anglia Sacra*, i. 416). Walsingham and Capgrave agree that he was fully worthy of the honours he obtained. His heir was his nephew, Sir Philip (*d.* 1463), the father of Peter Courtenay, bishop of Winchester [q. v.] (COLLINS, vi. 254).

Hardy; Cleaveland's Genealogical History of the Family of Courtenay (1735); Prince's Worthies of Devon, pp. 162–3, gives little additional.] T. F. T.

COURTENAY, THOMAS PEREGRINE (1782–1841), statesman and author, youngest son of the Right Rev. Henry Reginald Courtenay [q. v.], bishop of Exeter, by Lady Elizabeth Howard, daughter of Thomas, second earl of Effingham, was born 31 May 1782. He was returned to parliament in 1811 as M.P. for Totnes, being re-elected to every succeeding parliament until the dissolution of 1831. He was deputy-paymaster of the forces 1807–11. He was secretary to the commissioners for the affairs of India from 1812 till 1828, when he was promoted to be vice-president of the board of trade, being sworn a privy councillor on May 30 following. He retired from office in 1830 on a pension of 1,000*l.* a year. Besides efficiently discharging his official duties, he devoted a large portion of his time to the interests of literature, and was a member both of the Camden and Granger Societies. In addition to various political pamphlets, including 'Observations on the American Treaty, being a continuation of the Letters of Decius,' 1808, 'View of the State of the Nation,' 1811, 'Treatise upon the Poor Laws,' 1818, and a 'Letter to Lord Grenville on the Sinking Fund,' 1828, he was the author of 'Memoir of the Life, Works, and Correspondence of Sir William Temple, Bart.,' 1836, 2 vols., and 'Commentaries on the Historic Plays of Shakespeare,' 1840, originally contributed to the 'New Monthly Magazine.' After his brother's accession to the earldom of Devon, Courtenay was in November 1835 raised to the rank of an earl's younger son. He was accidentally drowned 8 July 1841. By his marriage, 5 April 1805, to Anne, daughter of Mayow Wynell Mayow of Sydenham, Kent, he left eight sons and five daughters.

[Gent. Mag. (1841) new ser. xvi. 316; Annual Register, lxxxviii. 213.] T. F. H.

COURTENAY, WILLIAM (1342?–1396), archbishop of Canterbury, fourth son of Hugh Courtenay, earl of Devon, and Margaret Bohun, daughter of Humphrey Bohun, earl of Hereford, by his wife Elizabeth, daughter of Edward I, was born in the parish of St. Martin's, a suburb of Exeter, in or about 1342. After receiving his early education in his father's house, he was sent to Stapledon Hall, Oxford, where he graduated in law, being described both as Doctor Decretorum and D.C.L. (*Fasciculi Zizaniorum*, pp. 288, 498). In 1367 he was chosen chancellor, and the university having successfully resisted the claim of the Bishop of Lincoln to control its right of election, he was admitted without

the episcopal confirmation. He obtained a bull of confirmation from Urban V, declaring that the election of a chancellor by the university was valid without the interference of the diocesan (*Munimenta Academica*, i. 229). His election displeased the friars; for he had taken part with the university in its struggle to enforce upon them obedience to its rules; and in spite of an agreement into which they had lately entered, they cited the chancellor to Rome. This, however, was an infringement of the rights of the crown, and the citation was quashed (*ib.* 226; Wood, *Antiquities of Oxford*, i. 480). Courtenay held prebends in the churches of Exeter and Wells, and on 24 March 1369–70 was made a prebendary of York. In this year also he was elected bishop of Hereford, and his defect in age having been made up by a papal bull dated 17 Aug., he was consecrated on 17 March 1370, and enthroned on 5 Sept. following. As bishop he allied himself with the party of the Prince of Wales and William of Wykeham, bishop of Winchester, who opposed the attacks made on the clergy by John of Gaunt, and he vigorously upheld the rights of the national church against the twofold oppression of the pope and of the crown, to which it was exposed. Neither at this, nor indeed at any other period of his career, does his conduct appear to warrant the assertion that he was 'influenced by party, not principle' (Hook, *Lives*, iv. 322). The welfare of the church of England and good government in church and state seem to have been the ends for which he laboured; and though, judged by the light of after days, some parts of his policy, such as his opposition to Lollardism, may fail to command sympathy, they certainly were not held to be contrary to the principles that became a loyal churchman or a constitutional statesman. He took a prominent part in vindicating the rights of the church in the convocation of 1373. When the king's demand for a subsidy was laid before the clergy, they declared that they were utterly undone by the exactions, not merely of the crown, but of the papacy, which were repeated nearly every year, and that they could help the king better 'if the intolerable yoke of the pope were taken from their necks,' and on this condition only they promised a tenth. Then Courtenay rose in anger, and loudly declared that neither he nor any of the clergy of his diocese would give anything until the king found a remedy for the evils from which the church suffered (Wilkins, *Concilia*, iii. 97; Wake, *State of the Church*, p. 303). The course of action seems to have been settled by agreement between him and Sudbury, bishop of London, who belonged to the Duke of Lancaster's party.

On the promotion of Sudbury to Canterbury in 1375, Courtenay was translated to the see of London on 12 Sept., and received the temporalities on 2 Dec. following. The struggle between the constitutional party and the court came to a climax on the meeting of the 'Good parliament' in the next year, and Courtenay was appointed a member of the committee of magnates associated with the commons to assist them in their deliberations (*Rot. Parl.* ii. 322; Stubbs, *Constitutional History*, ii. 428). The dispersion of the parliament was followed by the failure of its work. In the course of this year Courtenay served on a commission to settle a dispute that had arisen at Oxford between the faculty of law and the rest of the university (Wood, *History and Antiquities*, i. 488). About this time a bull of Gregory XI against the Florentines, with whom the pope was then at war, was brought into England. Wherever they were, the Florentines were to be pronounced excommunicate, and their effects were to be forfeited. Courtenay published this bull at Paul's Cross. He was always ready to obey the pope when the interests of the national church were not at stake. As a constitutional politician, he probably was glad to forward the downfall of the Italian merchants, from whom the king had long derived the money he wasted in extravagance, and as bishop of London he was no doubt willing to gratify the citizens, who were jealous of foreign traders. The Londoners pillaged the houses of the Florentines, and made a riot. This caused the interference of the city magistrates, and they sided with the king, who took the foreigners under his protection. The bishop was summoned before the chancellor to answer for his conduct. He was reminded that he had acted in defiance of the laws of the realm in publishing the bull, and was ordered to revoke certain words he had used at Paul's Cross. With some difficulty he obtained leave to do this by one of his officials, who declared from the pulpit that the people had misunderstood the words complained of (*Chronicon Angliæ*, p. 109; *Fœdera*, viii. 103, 135; Hook). At the meeting of convocation, on 8 Feb. 1377, Courtenay made a vigorous protest against the conduct of the archbishop in withholding the summons that should have been sent to the Bishop of Winchester. He pointed out the injustice with which the bishop had been treated by the government, and urged the clergy to make no grant to the crown until he had received his summons. His opposition was successful. Wykeham took his seat, and John of Gaunt, in whose interest the archbishop had acted, was foiled. The quarrel between the two

parties was carried on by the prosecution of Wycliffe, who was allied with the duke in the attempt to bring humiliation on the churchmen. Courtenay virtually attacked Lancaster when he cited Wycliffe to appear before the archbishop at St. Paul's on 23 Feb. The bishops sat in the lady chapel, and many nobles were with them. The church was crowded with the Londoners. Wycliffe appeared attended by the duke and Lord Percy, the earl marshal. They could scarcely pass through the crowd, and the earl ordered his men to clear the way. His order was obeyed with some roughness, and Courtenay, indignant at his conduct, declared that had he known he would have so acted he should not have entered the church if he could have prevented it. Hearing this, the duke declared that he would exercise his authority there whether the bishop would or no. When they came to the lady chapel, the marshal with a sneer called for a seat for Wycliffe. Courtenay objected to this, saying that it was contrary to law and reason that an accused clerk should be seated when before his judges. The duke grew red with anger, for he saw that the bishop had the better in the dispute. He shouted that he would pull down the pride of all the bishops in England, and, addressing Courtenay, added: 'Thou trustest in thy parents, who can profit thee nothing; for they shall have enough to do to defend themselves.' Coutenay answered with some dignity that he trusted in God alone. Still more enraged, the duke muttered that, rather than bear such things, he would drag the bishop out of the church by the hair. The Londoners heard the threat, and cried out angrily that they would not have their bishop insulted, and that they would sooner lose their lives than that he should be dishonoured in his own church, or dragged from it by violence. The court broke up in confusion. Later in the day the citizens rose against the duke, and proposed to slay him and burn his residence of the Savoy; but Courtenay interfered, reminding them that it was Lent, and no season for such doings. At his bidding the riot ceased, though not before many insults had been heaped upon Lancaster (*Chron. Angliæ*, p. 119, from which Foxe, *Acts and Monuments*, ii. 801, and the writer of the early translation in *Archæologia*, xxii. 257, took their accounts; Walsingham, i. 325).

Although Courtenay was appointed a member of the council of government formed on the accession of Richard II, he appears for a while to have absented himself from it, on account of a fresh offence committed by the duke. Robert Hale, a squire with whom Lancaster had a quarrel, escaped from the Tower, where he was confined, and took refuge in Westminster Abbey. In defiance of the privilege of sanctuary, an attempt was made to drag him from the church, and when he resisted, both he and a servant of the abbey were slain. The archbishop excommunicated the offenders, and Courtenay published the sentence, with full solemnity, at St. Paul's every Sunday, Wednesday, and Friday. The duke, to whom the outrage was generally attributed, persuaded the council to order him to desist. To this order, however, Courtenay paid no attention, and Lancaster declared that he was ready, if he received permission, to go to London and drag the bishop to the council, in spite of the 'ribalds' of the city. Meanwhile the archbishop and Courtenay received bulls from Gregory XI urging them to take measures against Wycliffe, and accordingly they cited him to appear before them at St. Paul's on 18 Dec., though a later date was afterwards named, and Lambeth was appointed for the place of hearing. Wycliffe, however, at this date had considerable influence at court (*Fasciculi Zizaniorum*, p. 258), and a strong party among the Londoners, headed by John of Northampton, was favourable to him. The Princess of Wales sent a peremptory message forbidding the prelates to proceed against him, and the prosecution came to nought. In the course of this year (1378) Courtenay, it is said, was offered the cardinalate. A large body of cardinals withdrew their obedience from Urban VI at a meeting held at Anagni on 9 Aug. The pope hastily appointed twenty-six others, and wished to strengthen his party by gaining the most powerful of the English churchmen. If the story of the offer is true, and there seems no reason to doubt it, Courtenay was too sincerely devoted to the national interest to be dazzled by it (Walsingham, i. 382; Godwin, *De Præsulibus*, 794 *n.*) On the suppression of the peasants' insurrection, in 1381, he obtained a respite of two days for John Ball (*d.* 1381) [q. v.], who was sentenced to death on 13 July; for he was anxious about the state of the rebel's soul (Walsingham, ii. 32).

On 30 July Courtenay was elected to the see of Canterbury, vacant by the murder of Simon Sudbury. The royal confirmation was given on 5 Aug., the translation was made by a papal bull dated 9 Sept., and the temporalities were granted on 23 Oct. The archiepiscopal cross was presented by the prior and convent of Christ Church on 12 Jan. following; on the 14th Courtenay, though he had not yet received the pall, married Anne of Bohemia [q. v.] to the king, and on the 22nd crowned the new queen. He received the pall on 6 May. The great seal was committed

to him on 10 Aug., and accordingly he opened parliament on 9 Nov., delivering the sermon in English (*Rot. Parl.* iii. 98). In this parliament the charters granted to the villeins were annulled. Courtenay resigned the chancellorship on the 18th, and it has been suggested that his retirement, which was completed by the surrender of the seal on the 30th, may have been connected with a desire to see some amelioration effected in the condition of the villeins (STUBBS). Early in 1382 Courtenay received a formal complaint from parliament against Wycliffe, dwelling, as it seems, not merely on his heretical opinions, but on the disturbance of the peace of the realm occasioned by his preachers, demanding that the archbishop and his suffragans should take decisive measures against him, and promising them the support of the crown. Accordingly, on the close of the parliament, Courtenay nominated a committee of bishops, doctors, friars, and others to pronounce on the opinions of the reformers. This council, as it was called, held its first session for business on 21 May, in the monastery of the Black Friars, at London, in the presence of the archbishop. Its proceedings were disturbed by the shock of an earthquake; and from this circumstance, to which each party gave a different meaning, it was called the 'Synod of the Earthquake.' Wycliffe's opinions were condemned, and on the following Whitsuntide a solemn 'procession' or litany was performed in London, at which Courtenay appointed Dr. John Kynyngham to preach against them. The archbishop further attacked the whole Lollard party at Oxford. While proceeding against a prominent member of it named John Aston [q. v.] at the Black Friars, on 20 June, he was interrupted by the Londoners, who broke into the room where he and his council were sitting. At Oxford his commissioner, Dr. Peter Stokys, was so terrified that he believed his life to be in danger. Courtenay recalled him, and compelled Dr. Rygge, the chancellor, who favoured the Lollards, to beg pardon on his knees. On Rygge's return to Oxford he again acted with the Wycliffites. The archbishop now appealed to the council, and after a short struggle brought the whole party to submission. On 18 Nov. he held a convocation of the clergy at St. Frideswide's, and received the recantation of the leading men of the party. It is asserted that Wycliffe appeared before him. This is highly doubtful. It is certain that if he did so he did not, as his enemies pretended, make any recantation, and that he was allowed to depart unmolested (KNYGHTON, col. 2649). In this year Courtenay obtained a statute commanding the sheriffs and other officers of the king, on the certification of a bishop, to arrest and imprison all preachers of heresy. This statute did not receive the assent of the commons, and on their petition it was repealed in the next parliament, as an infringement of their right of legislation. Courtenay, however, held royal letters empowering the bishops to imprison persons accused of heresy in their own prisons, and to keep them there until the council should determine what should be done with them. In 1388 the king, at the demand of parliament, issued letters calling on the archbishops and bishops to seize heretical books, and to imprison teachers of heresy. Accordingly the next year Courtenay made an attack on the Leicestershire Lollards, in virtue of the letters of 1382. He laid the town of Leicester under an interdict until the offenders were discovered, and having found them received their recantations on 17 Nov., imposing slight penances on them. In 1392, while the king was sitting in council at Stamford, the archbishop held a council of bishops and clergy at the house of the Carmelites in that town, and received the abjuration of a heretic. The failure of the attempt at legislation in 1382 had, however, left the churchmen no other means of enforcing submission than that which belonged to their old spiritual jurisdiction (STUBBS, *Constitutional History*, ii. 488, iii. 356).

In 1382 Courtenay began a visitation of his province, and after he had visited Rochester, Chichester, Bath and Wells, and Worcester, he proceeded to hold a visitation of Exeter. Here he met with resistance; for after he had, according to custom, ordered the ordinary jurisdiction of the bishops to be suspended, he delayed his visitation so long that the period during which such suspension could lawfully be continued had elapsed, both in this and in other dioceses. The bishop, Thomas Brentingham, therefore warned the clergy and people of his diocese to pay no heed to the archbishop's visitation, and finally appealed to Rome on the matter. Nevertheless Courtenay proceeded with his visitation, and excommunicated all who disobeyed him, the bishop himself among them. The bishop's men caught one of his officials near Topsham as he was carrying a citation directed to their master, ordering him to appear before the metropolitan, and this they forced the man to eat, wax seal and all. The king was so enraged at this, that the bishop was glad to make his peace with the archbishop and to drop his suit at Rome. The Bishop of Salisbury tried to secure himself by pleading that the right of visitation had lapsed with the death of Pope Urban VI, who had granted bulls empowering the archbishop to hold it,

and by procuring an exemption for himself and his diocese from Boniface IX. Courtenay, however, was a better canonist than his suffragan. He knew that though he had obtained these bulls as a cautionary measure, his right did not depend on the papal permission, and he declared that he would make a visitation of the diocese in spite of the exemption. Accordingly, he dealt so sharply with the bishop that he soon brought him to submission. In 1389 he gave notice of his intention to visit the Benedictines of Oxford, who resided in Gloucester College. This announcement created great excitement, both in the university and among the order throughout England. An elaborate scheme was devised by the abbot of Westminster for defeating his claim, and the abbot of St. Albans sent a monk with an urgent letter, begging him not to prosecute it. The archbishop asked the messenger to dinner in a kindly fashion, and afterwards tried to prove to him that the house was really a college. He went to Oxford, and met the monks in the church of St. Frideswide's. Although they refused to admit his claim, they treated him with respect. Courtenay, though quick-tempered and jealous of any attempt to slight his authority, was at the same time generous and good-natured, and when the monks appealed to his kindness, he freely abandoned his design (Walsingham, ii. 190–2; *Vita Ricardi*, ii. 115; Wood, *History and Antiquities*, i. 522. For another illustration of Courtenay's character see the *Chron. of a Monk of Evesham*, p. 58). He gave considerable offence by his attempt to levy procurations at the uniform rate of 4*d.* in 20*s.* throughout the province, to defray the expenses of his visitation. This demand was resisted, especially in the diocese of Lincoln, and the question remained unsettled at his death.

In the part taken by Courtenay in the limitations placed on the exercise of papal authority in England during the reign of Richard II there is no proof of the assertion that his 'principles and character had changed' from what they were in his earlier years (for the contrary view see Hook, iv. 383). When the statute of provisors was confirmed and enlarged (13 *Ric. II*, st. 2, c. 2) in 1390, he joined with the Archbishop of York in entering 'a formal protest against it, as tending to the restriction of apostolic power and the subversion of ecclesiastical liberty.' Three years later, when the conduct of the pope called forth the statute of præmunire (16 *Ric. II*, c. 5), the sharpest check placed on the interference of Rome until the time of Henry VIII, Courtenay had a hand in carrying the measure, and drew up a protest, not against the allegation contained in the preamble, but guarding the lawful and canonical exercise of papal authority, by words which are embodied in the statute itself (Stubbs, *Constitutional History*, ii. 598, iii. 330). In both these cases his conduct was consistent with the most jealous regard for national rights, and any apparent inconsistency is to be explained by his sense of what was demanded of him by his office. And though in 1389 he took some measures to collect a subsidy in obedience to the pope's orders, his action in the matter in no way proves his approval of the tax—it was simply what he was bound to do, unless he wished to embroil himself in a personal quarrel with the pope. The king ordered that the subsidy should not be levied, and the archbishop obeyed the command, which he may possibly have instigated, and which he probably approved. He regarded the king's extravagance and bad government with sorrow, and while he successfully resisted the attempt of the commons in 1385 to seize on the temporalities of the clergy, he faithfully adhered to the party opposed to the luxury of the court, and so upheld the cause with which the commons were led to identify themselves (*ib.* ii. 468, 470). In this year he was instigated by the lords of his party to reprove the king for his evil conduct, and he fearlessly told him that unless he ruled differently he would soon bring ruin on himself and on the kingdom. Richard fell into a rage, and would have struck the archbishop had he not been restrained by his uncle, Thomas of Woodstock. He abused him violently, and declared that he would take away the temporalities of his see. Courtenay was forced to take refuge in Devonshire. According to one account, the king pursued him on the Thames, and he was forced to flee in the habit of a monk (Walsingham; Mon. Evesham; Adam of Usk). He was one of the eleven commissioners appointed by parliament towards the end of the next year to regulate the household and the general administration of the kingdom. Richard took active steps to overthrow the authority of these commissioners, and war became imminent. The archbishop acted as mediator between the two parties. He persuaded the king not to resist the lords, and on 17 Nov. 1387 brought them into Richard's presence in Westminster Hall, and prevailed on him to give them audience (*Chron. Angliæ*, p. 387). Courtenay died at Maidstone, Kent, on 31 July 1396. He left directions that he should be buried there, and a flat stone, part of an altar-tomb, in Maidstone church is said to have been placed there in memory of him. It was probably intended that he should lie there; but his body was taken to Canterbury, and

buried, in the presence of the king and of a great number of bishops, earls, and barons, at the feet of the Black Prince, near the shrine of St. Thomas (THORN, col. 2197; HOOK). Courtenay founded the college of St. Mary and All Saints in the parish church of the archiepiscopal manor of Maidstone, leaving the residue of his property for the erection of the college, and joining with it the hospital established by Archbishop Boniface of Savoy [q. v.] He repaired the church at Meopham, Kent, and founded five scholarships in Canterbury College, Oxford.

COURTEVILLE, RAPHAEL or RALPH (*d.* 1772), organist and political writer, was the son or grandson of one of the gentlemen of the Chapel Royal who bore the same name, and who died on 28 Dec. 1675. The organ from the Chapel Royal was presented by Queen Mary in 1691 to the church of St. James's, Westminster, and on 7 Sept. in the same year a Ralph Courtaville, who had been strongly recommended by the Earl of Burlington, and who had previously been a chorister in the Chapel Royal, was appointed the first organist, with a salary of 20*l.* per annum for himself and 4*l.* for a blower. This Courteville, Courtaville, or Courtivill, was no doubt the composer of six 'Sonatas composed and purposley (*sic*) contriv'd for two flutes,' published by Walsh about 1690; of a song introduced in Wright's 'Female Virtuosoes,' and supposed to have been written by Ann, countess of Winchilsea; of a very graceful song, 'To Convent Streams,' in 'Duke and no Duke,' and of songs in 'Oroonoko.' He was one of the composers who furnished the music for part iii. of D'Urfey's 'Don Quixote' in 1695. The well-known hymn tune, 'St. James's,' is also by him. It has been supposed that this Courteville died about 1735, and was succeeded by his son of the same name; but as the vestry minutes of the parish, in which all appointments, &c. are carefully recorded, contain no mention of such a change of organists, while no record of the father's death can be found, we are compelled to believe that the existence of the son is a mere assumption, made in order to account for the long tenure of the post by a person or persons of the name of Courteville. This conclusion is strengthened by various entries in the vestry minutes; in January 1752–3, and again in June 1754, letters are written to him warning him that unless he attends personally to the duties of the post he will be dismissed. Whether he endeavoured to perform the duties himself after this we do not know, but he was certainly not dismissed, and shortly afterwards an assistant, 'Mr. Richardson,' was appointed. On 12 June 1771 it was reported to the vestry that Courteville gave this assistant only one quarter of his salary for doing the whole work, and he was thereupon ordered to share the payment equally with Richardson. Seven years before this, in 1764, the assistant, with two others, was consulted as to the state of the organ and the undertaking of repairs to its structure. Neither at this time, nor when the improved instrument, repaired by Byfield, was tried, was Courteville's advice asked in the matter, from which we may conclude that he was long past all work, although he was allowed to keep the post. This Raphael Courteville, whether or not he be identical with the first organist of the church, took a somewhat active part in politics towards the end of Sir Robert Walpole's administration. He is stated to have married, on 14 Sept. 1735, a lady named Miss Lucy Green, with a fortune of 25,000*l.* In 1738 he published 'Memoirs of the Life and Administration of William Cecil, Baron Burleigh, &c., including a parallel between the State of Government then and now,' with preface and appendix of original papers, dedicated to the Right Hon. Edward Walpole, secretary to the Duke of Devonshire. It is signed only 'R. C.,' and was printed for the author in London. He was the reputed author of 'The Gazetteer,' a paper written in defence of the government, and it was probably in consequence of this production that he acquired the nickname of 'Court-evil.' He also wrote a pamphlet published in 1761, entitled 'Arguments respecting Insolvency.' On 4 Dec. 1742 a letter appeared in No. 50 of the 'Westminster Journal' bearing his signature, to which were appended the words, 'Organ-blower, Essayist, and Historiographer.' The letter was undoubtedly written as a joke, probably upon his own genuine productions; it

is of course not by himself, and the point of the joke is impossible now to discover, but the appearance of his name in this connection proves that he was more or less a well-known character. He died early in June 1772, as on the 10th of the month he was buried, and his place was declared vacant at the vestry meeting of that date. His assistant, 'Mr. Richardson,' was appointed, with the necessary proviso 'that he perform his duty personally.'

[Grove's Dict. of Music; Hawkins's Hist. of Music; Notes and Queries, 2nd ser. x. 496; Registers and Vestry Minutes of St. James's, Westminster; Cheque-books of the Chapel Royal; Westminster Journal, quoted above; Brit. Mus. Cat.] J. A. F. M.

COURTHOPE, WILLIAM (1808–1866), Somerset herald, son of Thomas Courthope and his wife Mary, daughter of Thomas Buxton, born 6 May 1808, was engaged as private clerk by Francis Townsend, Rouge Dragon, in 1824, entered the office of the College of Arms as clerk in 1833, was appointed Rouge Croix in 1839, Somerset herald in 1854, and registrar of the college in 1859. He was called to the bar as a member of the Inner Temple in 1851, but did not practise. He accompanied several missions sent with the insignia of the Garter to foreign sovereigns. In 1838 he married Frances Elizabeth, daughter of the Rev. Frederic Gardiner, rector of Llanvetherine, Monmouthshire. He died without issue at Hastings, on 13 May 1866, at the age of fifty-seven. He was a learned and laborious genealogist, and his works are critical and generally trustworthy. He published: 1. An edition of Debrett's 'Complete Peerage of Great Britain and Ireland,' 1834, 1836. 2. An edition of Debrett's 'Baronetage,' 1835. 3. 'Synopsis of Extinct Baronetage,' 1835. 4. 'Memoir of Daniel Chamier, minister of the Reformed Church, with notices of the Descendants,' 1852, privately printed. Courthope was a descendant of Chamier. 5. A revised and corrected edition of Sir H. N. Nicolas's 'Historic Peerage of England,' 1857. 6. 'A Pictorial History of the Earls of Warwick in the Rows Role,' 1859; the date 1845 borne on the work refers to the plates and title-page, which were prepared in that year. He also contributed to 'Collectanea Topographica et Genealogica' and to the 'Gentleman's Magazine.'

[Gent. Mag. ccxxi. 111, 336; Memoir of D. Chamier; Brit. Mus. Cat.] W. H.

COURTHOPP, NATHANIEL (*d.* 1620), sea-captain in the service of the East India Company, enlisted in the company's service in November 1609, and left England in the Darling, one of Sir H. Middleton's fleet. With his commander and others he was taken prisoner by the Turks and kept in captivity at Aden and Mocha. On regaining his freedom he was appointed agent to the company's factory at Succedana (Borneo). In 1616 he was placed in command of two ships which were sent from Bantam to the islands of Banda. After two months' sail he arrived at Pulo Roon, where the natives readily agreed to surrender themselves as subjects of the king. Courthopp, however, was unable to carry on his expedition further, being compelled to fortify the island on account of the hostility of the Dutch, who seized one of his ships, and rendered his position one of great difficulty. With the exception of one or two flying visits to neighbouring islands, he remained at Pulo Roon for four years, undergoing great privations, till at last, in October 1620, he sailed to Lantore in pursuit of two Dutch ships which, as he was informed, had entered the harbour of that place. In an engagement which followed Courthopp received a shot in the breast, and leaping overboard was never seen again. The same year the Dutch expelled the English from both Pulo Roon and Lantore. In the preceding January the directors of the company had agreed that in recognition of his distinguished services Courthopp should receive 100*l.* per annum, and be recommended for preferment. In addition to Courthopp's journal, which has been preserved by Purchas, and some papers of his now in the Record Office, there are two letters written by him among the 'Egerton MSS.' at the British Museum (*Eg.* 2086, ff. 26, 44). One, dated from Neylacky, 29 June 1618, was addressed to Cassarian David, who occupied much the same uncomfortable position at Pulo Way as did Courthopp at Pulo Roon; and the other is a despatch to the president of the East India Company detailing the adventures of the expedition up to the date of writing, 15 April 1617.

[Purchas's Pilgrimes, vol. i. bk. v. pp. 664–79; Cal. State Papers, Col. Ser. vol. 1513–1616, vol. 1617–1621, passim.] A. V.

COURTNEY. [See also COURTENAY.]

COURTNEY, EDWARD (1599?–1677), a jesuit, whose real name was LEEDES, was the son of Sir Thomas Leedes, K.B., by Mary, daughter and heiress of Thomas Leedes of Northamilford, Yorkshire. He was born at Wappingthorne, the family seat in Sussex, in or about 1599. His father, having embraced the catholic religion, voluntarily left this country and settled at Louvain. Edward,

after studying classics in the college of St. Omer, entered the English college, Rome, for his higher course, as a convictor or boarder, under the name of Courtney, on 9 Oct. 1618 (Foley, *Records*, vi. 287). He joined the Society of Jesus at St. Andrew's in Rome in 1621, and was professed of the four vows in 1634 (Oliver, *Jesuit Collections*, p. 77). In the latter year he was arrested in London, and committed to the Gatehouse prison upon a charge of having written against the condemned oath of supremacy (Panzani, *Memoirs*, pp. 156, 162, 169, 177; Foley, *Records*, i. 251 et seq.) He was rector of the college of St. Omer (1646–9), twice rector of the English college, Rome, provincial of the English province of his order (1660–4), and then rector of the college of Liège. He died at St. Omer on 3 Oct. 1677.

He is the author of: 1. 'Thysia Philosophica, sive læta Disciplinarum oblatio. Illustriss. Principi Gvidoni Bentivolio S.R.E. Card. Ampliss. Ad concentus musicos expressa, cum sub fœlicissimis illius auspiciis de vniuersa Philosophia disputaret in Collegio Anglicano,' Rome, 1621, 4to. 2. 'In fvnere Elisabethæ a Lotharingia Bavariæ Ducis Oratio,' Liège, 1635, 4to. 3. 'R. P. Petri Writi, Sacerdotis Angli è Soc. Jesu, Mors, quam ob fidem passus est Londini, 29 Maii 1651,' Antwerp, 1651, 12mo (a translation of this biography of Peter Wright is printed in Foley's 'Records,' ii. 506–65). 4. 'Manipulus regius Heroidum sanctarum Britanniæ Serenissimæ Suecorum Reginæ Christinæ oblatus cum Collegium Anglicanum inuiseret,' Rome, 1656, fol. (Southwell, *Bibl. Script. Soc. Jesu*, 185). 5. 'Regiis Angliæ Divis Dithyrambus præside Octavio Card. Bandino in Disput. Thomæ Grini Coll. Angl. Alum. emodulatus,' 4to (Backer, *Bibl. des Écrivains de la Compagnie de Jésus*, ed. 1869, i. 1434).

[Authorities cited above.] T. C.

COUSE, KENTON (1721–1790), architect, received his training as an architect under Mr. Flitcroft of the board of works, and was subsequently introduced into that establishment; eventually he rose to be first clerk of the works and secretary to the board. In 1782, on the remodelling of the office, he was reappointed as examining clerk. For several years he was surveyor to the Goldsmiths' Company, and also enjoyed a very extensive practice as an architect both of a public and private character, gaining the esteem and credit of all parties with whom he was connected. Among the buildings designed by him may be noted the bridge over the Thames at Richmond (erected 1774–7); St. Paul's Church, Clapham Common; Botley House, Chertsey, &c. Couse married, 23 June 1750, at St. Mary Woolnoth, London, Miss Sarah Hamilton, and died in Scotland Yard 10 Oct. 1790 in his seventieth year. He left three children, Captain Charles Couse, R.N., and two daughters, the elder of whom was married to Sir C. Pegge.

[Redgrave's Dict. of English Artists; Gent. Mag. (1790), lx. 959; Chambers's Collections (MS.) for a Biography of British Architects; Registers of St. Mary Woolnoth.] L. C.

COUSEN, JOHN (1804–1880), line engraver, was born at Miryshaw near Bradford in Yorkshire 19 Feb. 1804. He was a pupil of John Scott, the animal engraver, but at an early period of his career he devoted himself to landscape engraving, and became one of the ablest engravers of the best period of the art. His exquisite taste is best displayed in his smaller book-plates, especially those after Turner for the 'Rivers of France,' viz. the 'Light-Towers of the Hève,' 'Harfleur,' 'Honfleur,' 'Château-Gaillard,' and the 'Bridge of Meulan.' These are full of artistic feeling and power of execution. Nearly equal to them are his plates after Stanfield in 'Heath's Picturesque Annual' for 1833 and 1834, and after Cattermole in that for 1835, and those after David Roberts, James D. Harding, and James Holland in the 'Landscape Annual' for 1834 to 1839. Besides these he engraved a plate of 'Babylon' for Finden's 'Landscape Illustrations of the Bible;' another for Stanfield's 'Coast Scenery;' two plates for White's 'Views in India;' and 'Folkestone Beach,' 'St. Agatha's Abbey,' 'Whitby,' and 'The Abbey Pool,' the last four after Turner, and published in 'Art and Song' in 1867. His larger works, 'Mercury and Herse' after Turner, and 'Towing the Victory into Gibraltar' and 'The Morning after the Wreck,' both after Stanfield, are of great excellence, as are also his plates for the Royal, Vernon, and Turner Galleries, issued in the 'Art Journal.' Those for the 'Royal Gallery' comprise 'The Old Mill' after Hobbema, 'The Fountain at Madrid' after David Roberts, and 'The Harvest Field' after Tschagenny; while those for the 'Vernon Gallery' include 'A Woodland View' after Sir David Wilkie, 'Rest in the Desert' after W. J. Müller, 'The Cover Side' after F. R. Lee, 'Cattle: Early Morning on the Cumberland Hills' after T. Sidney Cooper, 'The Old Pier at Littlehampton' and 'Dutch Peasants returning from Market,' both after Sir A. W. Callcott, 'The Battle of Trafalgar' and 'The Canal of the Giudecca and Church of the Jesuits, Venice,' both after Stanfield, and 'The Mountain Torrent' and 'Peace'

after Sir Edwin Landseer, the figures in the last-named plate being by Lumb Stocks. The plates which he engraved for the 'Turner Gallery' are 'Calais Pier: Fishing Boats off Calais,' 'Snowstorm: Hannibal and his Army crossing the Alps,' 'Peace: Burial at Sea of the Body of Sir David Wilkie,' 'Petworth Park,' and 'St. Michael's Mount, Cornwall.' He engraved likewise for the 'Art Journal' 'Labour' and 'Rest' after John Linnell, 'Crossing the Stream' after Sir A. W. Callcott, and 'A Dream of the Future' after Frith, Creswick, and Ansdell. Cousen was of a somewhat reserved and retiring disposition, but his kindness of heart, genial humour, and unaffected simplicity of character endeared him to those friends with whom he associated. In consequence of weak health he retired from the practice of his profession about sixteen years before his death. Twice only, in 1863 and 1864, did he exhibit at the Royal Academy. He died 26 Dec. 1880, at South Norwood, London, and was buried in Croydon cemetery. His younger brother, Charles Cousen, was also known as a line engraver of ability.

[Times, 29 Dec. 1880; Athenæum, 1 Jan. 1881; Art Journal, 1881, p. 63; Bryan's Dict. of Painters and Engravers, ed. Graves, 1886, i. 320; information from Lumb Stocks, esq., R.A.]

R. E. G.

COUSINS, SAMUEL (1801–1887), mezzotint engraver, was born at Exeter 9 May 1801. His father had five sons and four daughters. His early education was in the Exeter episcopal school, and while there he showed great taste for art, spending most of his spare time in copying engravings with the pencil. Captain Bagnall accidentally saw some of Cousins's drawings in a shop window; bought several, and sent him to the Society of Arts. Cousins was then under ten years of age. He gained, on 28 May 1811, the silver palette of the Society of Arts for a drawing after a print by James Heath representing 'The Good Shepherd' painted by Murillo. In the following year Cousins received the silver Isis medal for another pencil drawing, the subject of which was 'A Magdalen.' This was seen by S. W. Reynolds, the mezzotint engraver, who in September 1814 took the youth as apprentice without receiving the usual premium, which amounted to 300*l*. Sir Thomas Dyke Acland was a warm patron, and took care that the boy's education should be carried on. After finishing his apprenticeship he reluctantly consented, at Acland's desire, to become assistant to his master for four years, at a salary of 250*l*. On four plates —portraits of Sir Joseph Banks, the Rev. T. Lupton, Viscount Sidmouth, and the Rev. J. Mitchell—executed between 1822 and 1825, the name of Reynolds is associated with that of Cousins. On 19 Feb. 1824 Cousins wrote: 'I have been lately finishing a half-length plate from a picture by Sir W. Beechy. It is a portrait of the Duchess of Gloucester, a tolerably good plate, and I am to have my name to it; but I believe it will not be seen abroad much, and therefore will be of little use. . . . Mr. Reynolds has taken another pupil, . . . and by his improved behaviour towards me certainly intends keeping me as long as he can.' At the end of his four years' partnership Cousins set up for himself at 104 Great Russell Street. In 1826 he visited Brussels, and in this same year he engraved the first plate on his own account, the portrait of Lady Acland and her children, and also 'Master Lambton,' after Sir Thomas Lawrence. In November 1835 he was elected an associate of the Royal Academy, transferred to the new class of associate-engravers in 1854, and was the first to receive, 10 Feb. 1855, the rank of academician-engraver. He determined in 1874 to retire, but was induced to undertake new work, and did not entirely give up his art until 1883. He died at his house, 24 Camden Square, 7 May 1887. He never married. A sister lived with him during the greatest part of his life, and survived him. One of his latest works was an engraving of his own portrait by Mr. Long (1883). He was also painted by Mr. Frank Holl in 1879, and etched by M. Waltner. In January and March 1872 Cousins deposited in the department of prints and drawings, British Museum, an almost complete set of his engravings, and presented a small set to the Albert Memorial Museum, Exeter. He also gave about that period 15,000*l*. to the Royal Academy in trust for the benefit of deserving and poor artists. In 1877 Messrs. Thomas Agnew & Sons held an exhibition of Cousins's works at Manchester; in 1883 another exhibition took place at the Fine Art Society, 148 New Bond Street, and a third exhibition was held in the season of 1887 at Messrs. H. Graves & Co.'s, Pall Mall. The following is a list of the most important engravings by Cousins: Lady Acland and children, after Lawrence (1826); Master Lambton, after Lawrence (1826); Pope Pius VII, after Lawrence (1827); Lady Grey and children, after Lawrence (1830); the Earl of Aberdeen, after Lawrence; 'The Maid of Saragossa,' after Wilkie (1831); 'Bolton Abbey in the Olden Time,' after Landseer (1837); Queen Victoria, after Chalon (1838); Duke of Wellington as chancellor of Oxford,

after Lucas (1840); 'Queen Victoria receiving the Sacrament at her Coronation,' after Leslie (1840); Sir R. Peel, after Lawrence (1850); 'A Midsummer Night's Dream,' after Landseer (1857); 'The Maid of the Magpie,' after Landseer (1862); 'Piper and Pair of Nutcrackers,' after Landseer (1865); 'The Strawberry Girl,' after Reynolds (1873); 'Yes or No,' after Millais (1873); 'Simplicity,' after Reynolds (1874); Lady Caroline Montague as 'Winter,' after Reynolds (1875); Moretta, a Venetian girl, after Leighton (1875), and Lavinia, Countess Spencer, after Reynolds (1877); Cardinal Newman, after Lady Coleridge (1877); 'Ninette,' after Greuze (1877); 'Cherry Ripe,' after Millais (1881); and 'Pomona,' after Millais (1882).

[Mr. George Pycroft's privately printed Memoir of Samuel Cousins, 1887, supplies a full chronological list of Cousins's works. See also Artists at Home, 1 April 1884, pt. ii. p. 19.] L. F.

COUTANCES (DE CONSTANTIIS), WALTER DE (*d.* 1207), bishop of Lincoln and archbishop of Rouen, is said to have been of English birth, the son of Rainfred and Gonilla; John de Schalby, in his compilation from the Lincoln records, states that he was a native of Cornwall, and to this Giraldus Cambrensis (*Vita S. Remigii*, cap. XXV.) adds that though called of Coutances he was sprung from the house of Corineus, the fabulous Trojan immigrant into Cornwall. Both speak of him as a liberal and accomplished man, devoted to literature, and well skilled in secular and courtly affairs. He was clerk to Henry II and his eldest son, and is styled chaplain of Blythe. His first piece of preferment was the church of Woolpit in Suffolk (JOCEL. OF BRAKELONDE, p. 35). In 1173, when Ralph of Warneville was chancellor of England, he was made vice-chancellor (DICETO, i. 367), and he was also canon and treasurer of the church of Rouen. In 1175 he was made archdeacon of Oxford, and, according to Diceto (ii. 14), held a canonry at Lincoln. While archdeacon we find him writing to Bartholomew, bishop of Exeter, on the question of dissolving illegitimate marriages (PETER OF BLOIS, Epist. 83), and attesting the peace of Falaise between Henry II and William king of Scotland (BENEDICT. ABB. i. 99). In 1176 he had an allowance of fifty marks for providing for the ambassadors of the king of Sicily on the occasion of their demanding Henry's daughter Joanna in marriage. In 1177 he went as envoy to Flanders to obtain the answer of Philip Count of Flanders as to the marriage of the daughters of his brother Matthew; and in the same year he went as ambassador to France from Normandy (*ib.* i. 168, 175). In 1180 he was seal-bearer to Henry II, and accounted for the proceeds of the abbeys of Wilton and Ramsay, and of the honour of Arundel, then in the king's hands, of which he had been appointed guardian. He seems to have aimed at the see of Lisieux, and according to the letters of Bishop Arnulph to have been somewhat unscrupulous in his endeavours to induce him to resign in his favour (ARNULPH LEXOV. Epist. 107, 117). In 1182 he is mentioned in the king's will as one of those present at Waltham at the division of his property (GERVASE CANT. i. 298). On the resignation of Geoffrey Plantagenet he was elected to the see of Lincoln, and though at first objected to by Henry II because elected without his will and consent, ultimately met with no opposition, and after being ordained priest on 11 June 1183, by John bishop of Evreux, was consecrated bishop of Lincoln on 3 July 1183 at Angers by Archbishop Richard in the church of S. Laud, in the king's presence, and was enthroned on 11 Dec. He remained too short a time at Lincoln to leave any especial mark of his episcopate. He was present at the council of Westminster in 1184 when Baldwin was elected archbishop (BEN. ABB. i. 319); and he is described as injuring the see of Lincoln by confirming to the Sempringham house of St. Katharine-without-Lincoln the churches which his predecessor Robert de Chesney had alienated from the see (GIRALD. *Vita S. Remigii*, cap. XXV.), and leaving the see in debt to the king because he had not paid the tribute of a mantle (*Vita S. Hugonis*, p. 184, ed. Dimock).

In 1184, at the request of Henry II and through the intervention of Pope Lucius III, he was elected archbishop of Rouen (JAFFÉ, p. 847), though the canons had at first elected Robert de Novo Burgo; he was enthroned on 24 Feb. 1185, little more than a year, as remarked by Diceto, since his enthronement at Lincoln. The pall was sent to him at once, by the hand of the sub-deacon Humbald. Newburgh says (iii. 8) that he hesitated for some time whether to prefer the more eminent to the richer see, but that at length ambition triumphed over the love of wealth. One of his first acts was to obtain from Henry II the union of the abbeys of St. Helier, Jersey, and that of du Vœu, Cherbourg (R. DE MONTE, ii. 133, ed. Delisle). In 1186 he went as ambassador into France; he had an interview with Philip, and after passing through Flanders landed at Dover (DICETO, ii. 43). In 1187 he was appealed to by the convent of Canterbury against the violation of their privileges by the archbishop of Canterbury, and we find him afterwards appointed one of the arbitrators

in that prolonged and wearisome strife (*Epist. Cantuar.* pp. 84, 317, 322). In 1188 he took the cross, and was at the council of Le Mans, where the Saladin tithe was levied (Ben. Abb. ii. 30). This year he was again sent to Philip to demand reparation for the outrages committed by him in Normandy, and he was one of those to whose judgment as regarded the peace, under the direction of John of Anagni, the legate, the two kings promised to submit. In 1189, at the conference of La Ferté Bernard between Henry II, Philip, and Richard, he was present on the part of Henry II. On the death of Henry II, he absolved Richard at Seez for his conduct to his father, and invested him with the sword of the duchy of Normandy at Rouen; then preceding the new king to England, he took part in the coronation at Westminster. In the same year we find him attesting the king's grant of Sadberge to the see of Durham; at the council of Pipewell; pronouncing the decision of the arbitrators in the great question between the Archbishop of Canterbury and the monks, for which they called him a traitor (Gervase Cant. i. 474–9); and witnessing the charter of release given by Richard to the king of Scots. In December 1189 he was sent by Richard to the legate to stay Geoffrey's election to York, and soon afterwards accompanied the king to Normandy, and held a council at Rouen in February 1190. After this, in pursuance of his crusading vow, he joined Richard at Pisa. At Messina he acted with those who endeavoured to make peace between the people of Messina and the crusaders (R. Devizes, p. 22), and by his advice the spoils of Messina were restored to the citizens (*Itin. Regis Ricardi*, p. 170). He took part in the arrangements for agreement between Richard and Philip, and acted as one of the treasurers for the crusading money. He was also one of Richard's sureties for the peace with Tancred, and his name appears as witnessing Richard's charter of wreck. Hoveden also mentions his opposition to the wild views respecting Antichrist of Abbat Joachim.

His crusade came to an end here, for the troubles in England through the disloyalty of John and the unpopularity of Bishop Longchamp, the chancellor, came to a head, and Richard sent the archbishop of Rouen back to England to arbitrate, giving him full, though secret, powers. Richard of Devizes (p. 27) mocks at his readiness to return. Though employing him for his own purposes, Richard seized all the money he had brought with him for his expenses on the crusade. He returned to England in company with Queen Eleanor (Devizes, p. 28). In England he found all things in confusion, the chancellor the actual ruler of the country, unpopular with all, as he had managed to offend all; John aiming at supreme power, and others, such as Geoffrey of York and the justiciars, taking an independent line of their own. Besides the general pacification of the country, he was also to effect an election to the see of Canterbury, which had been vacant since Baldwin's death at Acre. The archbishop was named justiciar, but had fuller powers than any of the others (Girald. iv. 396). He had a very difficult part to play. 'Richard's conduct,' says Bishop Stubbs (Pref. to Hoveden, iii. p. lx), 'was puzzling to all parties; at the very moment he was entrusting the widest powers to the archbishop, he was writing to urge John and others to act in unison with the chancellor.' Devizes (pp. 29, 31) accuses the archbishop of playing a double part, and a letter from the convent of Canterbury, written after the election to the see, does the same (*Epist. Cant.* p. 360); but it would have been difficult for him to escape such an accusation, as he was of necessity opposed to John, while at the same time he had to act against the chancellor. The latter at first received him with honour (Devizes, p. 28). One of his first acts was to take part in the arrangement between John and the chancellor, and to receive the surrender from John of the castles of Nottingham and Tickhill. On Geoffrey's complaint of the treatment he had received from the chancellor on landing at Dover, the archbishop, with John and others, summoned the chancellor to Reading. He did not come; they all hastened to London, the chancellor doing the same, and their followers actually skirmishing by the way. They met in St. Paul's, and here the archbishop produced his commission. The chancellor was deposed, and the archbishop made chief justiciar in his place, promising to do nothing without the consent of those associated with him and the advice of the barons of the exchequer. He then summoned the clergy to the election to Canterbury. Probably both himself and the chancellor had had their eyes on the see, and each regarded the other as a rival. There is a letter of John to the convent of Canterbury mentioning a report that they intended to elect the chancellor, warning them that they were bound to consult the Archbishop of Rouen, who was sent for this purpose by the king, and one from himself to the same effect (*Epist. Cant.* pp. 346, 347); the Bishop of Ely, on the other hand, forbade him to go to Canterbury till they had met (Dicето, ii. 92). At the election he displayed the royal letter, and the Bishop of Bath was elected. Gervase says that by this he

was 'spe fraudatus,' and that he appealed against the election; but that he acquiesced after the elect had accepted the see (GERVASE CANT. i. 511, 512). The Bishop of Bath, however, died within a month of his election, and the Archbishop of Rouen took part in the second election, when Hubert Fitzwalter was elected. The archbishop confirmed the privileges of the city of London, and the Londoners took the oaths to Richard and John. Bishop Longchamp resigned his castles, and after leaving the country was treated as excommunicate by the archbishop's order in Normandy. He complained to the king, and had interest enough with the pope (Celestine III) to obtain a letter in his favour to the English prelates, by which John was threatened and his advisers excommunicated. On the strength of this he excommunicated the archbishop, whom he styles the 'Pilate of Rouen' in a letter to S. Hugh of Lincoln. His mandate was, however, neglected by the bishops, and the archbishop and the other justiciars seized the property of the see of Ely, and wrote to the king to point out the harm the chancellor had done to the country, and how he had been deposed by the common council of the realm. The consequent distress in the diocese of Ely was so great that Queen Eleanor went to London and demanded that the archbishop should relax the sentence of excommunication, and restore to the bishop his estates (DEVIZES, pp. 43, 56). A letter from the archbishop's agents at Rome in 1192 tells us that the pope took up Longchamp's cause, annulled both the excommunications, and sent messengers to mediate between them. On their arrival at Gisors they were prevented by William FitzRalph, the steward of Normandy, from entering the country, as not having the king's leave; they laid Normandy under an interdict in consequence; Queen Eleanor and the archbishop sent Hugh, bishop of Durham, to them, but could not induce them to give way. At length the pope relaxed the sentence and compelled their obedience, in spite of their still being prevented from entering the country.

In the meantime the news of Richard's imprisonment arrived. The archbishop did all in his power on the occasion; writing to the Bishop of Durham respecting the ransom, sending the abbots of Boxley and Robertsbridge to find out where the king was, refusing to listen to John's treasonable proposals, and arming the country against him, so as to defend the west and make invasion impossible. Through the queen's influence a truce was made with John till November 1193, while Windsor and other castles were entrusted to her. The archbishop met the chancellor in 1193 at St. Albans, and arranged for the collection and payment of the ransom, being himself appointed one of the guardians of the treasure, he and the other justiciars putting in force the exactions necessary for its collection. Richard sent for him to come with Queen Eleanor to him in Germany, and thus his justiciarship and leadership of English affairs came to an end. In 1194 he was present at the meeting at Mentz between Richard and the emperor, and was left on Richard's release as a hostage for the payment of the ten thousand marks that still remained of the ransom (DICETO, ii. 113). He mentions the king's release in a letter to Diceto (ii. 112). As soon as the ransom was paid he was released, and went to London, where he was received with a solemn procession in St. Paul's and preached to the people (DICETO, ii. 115). He then returned to Normandy, and was the same year at Pont de l'Arche, where the conference between the king of France and the Norman barons was to have been held, the occasion when Philip played false and did not come. Later he was at Vaudreuil for the settlement of peace between France and England. In the following December he ransomed from Philip the lands belonging to his see which Philip had seized. A serious quarrel took place in 1195 between the canons of Rouen and the citizens, respecting which there is a letter of Pope Celestine III (11 Oct.), exhorting the latter to give compensation for the injuries done (JAFFÉ, p. 902). The archbishop speaks of these and his other troubles in a letter to Diceto (ii. 144). But he had further troubles before him. In 1196 Philip demanded his manor of Andely, and also required him to do fealty for the Vexin. Not trusting in Richard's support, he appealed to the pope. Soon afterwards, on Richard's fortifying Andely (by building his château Gaillard) in spite of his prohibition, he laid the whole of Normandy under an interdict, urged on (according to MATTHEW PARIS, ii. 420) by Philip, and went to the pope. He gives a full account of this matter in his letter to Diceto (ii. 148). The interdict was continued in all its severity (HOVEDEN, iv. 16). The cause was tried at Rome, and the pope and cardinals gave their advice that he should allow the fortifications to proceed as necessary for the safety of Normandy, and accept the compensation which Richard offered. Celestine III then relaxed the interdict, and Dieppe and other places were given to the archbishop in exchange. His and Richard's letters, and the confirmation afterwards of the exchange by Innocent III, may be seen in Diceto (ii. 154, 157, 160). It is to this exchange that the verses relate—

Vicisti, Galtere, tui sunt signa triumphi
Deppa, Locoveris, Alacris mons, Butila, Molta, &c.

He had some trouble with Pope Innocent III in 1198 for allowing William de Chemillé to exchange the see of Avranches for that of Angers.

On Richard's death he invested John with the sword of Normandy, and received his oath to preserve the church and its dignities. John soon afterwards confirmed the exchange of Dieppe, Louviers, &c., for Andely. He took part in the meeting between Vernon and Andely for bringing about peace between England and France; he was appointed by the pope to settle the quarrel between the Archbishop of Tours and the Bishop of Dol, and he quieted the strife between the chamberlain of Tancarville and the abbey of Le Valasse. On the loss of Normandy by John he had no difficulty in transferring his allegiance to Philip, and he invested Philip with the sword of the duchy as he had Richard and John. He died 16 Nov. 1207, soon after dedicating Isle Dieu, and was buried in Rouen Cathedral.

Excepting Devizes, as mentioned above, all the chroniclers speak well of him; Giraldus (iii. 303) speaks of his handsome behaviour to him. He gives two curious anecdotes of his influence over animals (iv. 409). Richard had evidently the greatest confidence in him, as may be seen in the letters he wrote to him on the capture of Acre (*Epist. Cant.* cccl xxv. p. 347) and on the battle of Arsouf (a letter preserved by Wendover; MATT. PARIS, ii. 376, 377). He obtained the title of 'Magnificus' in his own diocese.

There are many letters to him in the regesta of the various popes from Alexander III to Innocent III; in the letters of Peter of Blois, the 'Acta Roberti de Monte' (ii. 333, Delisle); besides those preserved by and to him in Diceto and the other chroniclers. He is said to have written a treatise 'De Peregrinatione regis Ricardi,' and one 'De Negotiis Juris.'

[The authorities for the life of Walter de Coutances have been chiefly indicated above, viz. Richard of Devizes, Gervase of Canterbury, Benedictus Abbas, Hoveden, William of Newburgh, the Epistolæ Cantuarienses, all of which, excepting the first, have been published in the Rolls Series of Chronicles and Memorials. There is a slight sketch of him by Giraldus Cambrensis in his Vita S. Remigii, cap. xxv., and in his Vita Galfridi Arch. Ebor. ii. cap. x. (ed. Brewer, iv. 407). For modern sources see Gallia Christiana, xi. 51–9; Foss's Biographical Dictionary of the Judges of England, p. 184; and especially Bishop Stubbs's Preface to the third volume of his edition of Hoveden, pp. lix–xcviii, ciii; see also the note, iii. 96.] H. R. L.

COUTTS, JOHN (1699–1751), merchant and banker, and lord provost of Edinburgh, eldest son of Patrick Coutts, a tradesman in Edinburgh, and formerly of Montrose, by his wife, Christina Smith, was born on 28 July 1699. He entered into business as commission agent and dealer in grain, and rapidly acquiring capital became a negotiator of bills, a business which the banks had not yet taken up. In 1730 he entered the town council, and in 1742 was elected lord provost, when he sustained the dignity at great expense, conducting the banquetings in his own dwelling. He held office till 1744, having been once re-elected. He was a great encourager of the fine arts. He died at Nola, near Naples, in 1751, at the age of fifty-two. By his wife Jean Stuart, who died in 1736, he had five sons and a daughter, his two sons James and Thomas [q. v.] being founders of the banking house of Coutts & Co. His portrait, painted by Allan Ramsay, belonged to the Baroness Burdett-Coutts.

[Rogers's Genealogical Memoirs of the Families of Colt and Coutts, 1879, pp. 16, 18–21.] T. F. H.

COUTTS, THOMAS (1735–1822), founder with his brother James of the banking house of Coutts & Co. in the Strand, was the fourth son of Lord-provost John Coutts of Edinburgh [q. v.], and was born on 7 Sept. 1735. He was educated at the high school of Edinburgh. On the death of his brother James in 1778 he remained sole partner of the banking house in the Strand. He became the banker of George III, and of a large number of the aristocracy. He was a gentleman of wide accomplishments, and very charitable. While admitted into the highest circles, he was of economical habits, and amassed a fortune to the value of about 900,000*l.* He died on 24 Feb. 1822. By his first wife, Susan Starkie, a servant of his brother, he had three daughters: Susan, married in 1796 to George Augustus, third earl of Guilford; Frances, married in 1800 to John, first marquis of Bute; and Sophia, married in 1793 to Sir Francis Burdett, bart. [q. v.] Three months after the death of his first wife, in 1815, he married Harriet Mellon, an actress, to whom he bequeathed the bulk of his property (cf. *Notes and Queries*, 6th ser. v. 108, 152). She married the ninth Duke of St. Albans, and died in 1837.

[Rogers's Families of Colt and Coutts, 1879, pp. 22–6; Life of Thomas Coutts, 1822; Gent. Mag. new ser. xxxi. 382; F. G. H. Price's London Bankers, pp. 44–5; Chambers's Eminent Scotsmen (Thomson), i. 389–90.] T. F. H.

COVE, MORGAN (1753?-1830), divine, was born in or about 1753. He received his academical education at Trinity Hall, Cambridge, where he was admitted sizar on 7 Nov. 1768, scholar on 15 Jan. 1770, fellow-commoner on 26 Nov. 1775, and proceeded LL.B. in 1776 (*College Admission Book*). He was incorporated of Magdalen Hall, Oxford, on 19 Jan. 1810, and became a grand compounder for the degree of D.C.L. on 1 Feb. following. In 1795, when residing at Helston, Cornwall, he published anonymously an 'Essay on the Revenues of the Church of England, with an Inquiry into the . . . Abolition or Commutation of Tithes' (second edition, with author's name, 1797; third edition, 1816), wherein he showed himself a vigorous apologist for the existing arrangements in the revenues of the church. The pamphlet attracted much attention, and in the year of its publication the author was collated to the vicarage of Sithney, Cornwall, by Dr. Buller, the then bishop of Exeter. Four years later, in 1799, he was presented to the rectory of Eaton-Bishop, Herefordshire, by Bishop Butler, who also gave him on 12 April 1800 the prebend of Withington Parva, and on 23 March 1801 translated him to the prebend of Gorwall and Overbury in Hereford Cathedral. On 1 Oct. 1828 he was appointed chancellor of the choir, an office he continued to hold until his death, which occurred at Hereford on 9 April 1830 at the age of seventy-seven. Besides the above-mentioned work Cove published 'An Inquiry into the Necessity, Justice, and Policy of a Commutation of Tithes,' 8vo, London, Hereford [printed], 1800. Both pamphlets, 'corrected and greatly enlarged,' were reissued in one volume in 1817.

[Gent. Mag. c. i. 648; Le Neve's Fasti (Hardy), i. 494, 507, 533.] G. G.

COVEL, COVELL, or COLVILL, JOHN (1638-1722), master of Christ's College, Cambridge, son of William Covel, was born at Horningsheath, Suffolk, on 2 April 1638 (*Add. MS.* 22914, ff. 27, 68). After receiving his early education at the grammar school, Bury St. Edmunds, he was admitted a member of Christ's College, Cambridge, on 31 March 1654, being then in his sixteenth year. He graduated B.A. in 1658, and M.A. in 1661, and was elected a fellow of his college. Cole, on the authority of H. Wanley, says that before he took orders he studied physic, and throughout his life he retained a strong taste for natural science, and especially for botany. On 17 March 1669-70 he was elected chaplain to the Levant Company, and in that capacity served Sir Daniel Harvey and his successor Sir John Finch, ambassadors to the Porte. He went to Deal, intending to start on 3 Sept. 1670, but, being delayed by contrary winds, did not leave until the 21st, and reached Constantinople before the end of the year. He resigned his engagement with the company on 23 May 1676 (PEARSON). On 16 Feb. 1676-7 he took a journey to Nicomedia and Nicæa. He finally left Constantinople on 2 April 1677, and, having gone by water to Venice, made a tour through the Italian cities, and appears to have reached London on 20 Jan. 1679. His manuscript journals of his travels are illustrated with representations of buildings and various natural objects, drawn with considerable spirit, with maps, plans, and inscriptions. During his stay at Constantinople much interest was taken both in England and in France in the doctrines and practices of the Eastern church, and before he left he was requested by Gunning, Pearson, and Sancroft, all three afterwards bishops, to investigate the question then in debate between Dr. Arnauld of the Sorbonne, and M. Claude, minister of Charenton, as to whether the Greeks held transubstantiation. Covel accordingly turned his attention to that subject, as well as to scientific pursuits, which seemed to be more natural to him, and had many discussions on it with the French ambassador. He collected several books and some few manuscripts, and intended to write a treatise on the Eastern church shortly after he came back, but it was long before he did so. He also took great interest in botany, and sent home some rare plants. His manuscripts contain a few attempts at poetry; one in praise of Mistress Hester H., written in 1666, has a tune written to it. On his return to England he resided at his college. His travels brought him some fame (EVELYN, *Diary*, ii. 338), and in 1679 he was the Lady Margaret preacher at the university. The same year also he was made D.D. by royal warrant. On 5 March of the next year he was instituted to the sinecure rectory of Littlebury, Essex, on the presentation of Gunning, bishop of Ely, and on 31 Oct. 1681 to the rectory of Kegworth, Leicestershire, a living in the gift of his college (NICHOLS, *Leicestershire*, iii. 856). In this year also he was appointed to succeed Ken as chaplain to the Princess of Orange, and accordingly left England to reside at the Hague. In October 1685 the Prince of Orange intercepted a letter Covel wrote to Skelton, the English ambassador, giving an account of William's tyrannical behaviour towards his wife, and he was dismissed and sent back to England at three hours' notice (STRICKLAND; SIDNEY, *Diary*). Covel would never speak of the cause of his dismissal,

and for a long time it remained a mystery (Cole).

On 9 Nov. 1687 Covel was instituted chancellor of York on the presentation of the king during the vacancy of the see. On the death of Dr. Cudworth, master of Christ's, in 1688, the fellows had reason to fear that James was about to send them a mandate to elect a certain member of their society named Smithson, rector of Toft; they therefore proceeded in some haste to an election, and on 7 July chose Covel as master, a choice they probably would not have made had they had more time (*Cole MSS.* xx). James, although his scheme was defeated, approved of the election, and Covel appears to have been a popular master. He was vice-chancellor when William III visited Cambridge on 4 Oct. 1689, and it is said that, when he expressed some doubt as to how the king would receive him, William sent him word that he could distinguish between Dr. Covel and the vice-chancellor of the university. The king accordingly received him courteously, but the old quarrel at the Hague is supposed to have stood in the way of his preferment (*ib.*) He was again vice-chancellor in 1708. The book for which he had collected materials during his stay in the East appeared in 1722 under the title 'Some Account of the present Greek Church, with Reflections on their present Doctrine and Discipline, particularly on the Eucharist and the rest of their Seven Pretended Sacraments, compared with Jac. Goar's Notes on the Greek Ritual or Εὐχολόγιον,' fol. Cambridge. It was little read, for men had ceased to care for the questions it handled. Covel in his preface says that the delay was caused first by his 'itinerant' life, and then by his engagements at Cambridge, where he describes himself as 'chained to a perpetual college bursar's place.' He died on 19 Dec. of the same year, and was buried in the chapel of Christ's, where there is an inscription to him. He left by will 3*l.* a year to the poor of Littlebury. Cole, the writer of the 'Athenæ Cantabrigienses,' lighted by chance, he says, on Covel's picture in his congregation robes, and presented it to Christ's. It was painted by a certain Valentine Ritz, a German who lived some seven years at Cambridge, and died there. Covel's journals and correspondence are in the British Museum Additional MSS. 22910–14; they consist of two large folios of autograph letters, some of considerable interest, from Newton, Locke, Wanley, and others—the Newton letters, however, are not autographs, the originals are at Trinity College, Cambridge. There is a correspondence with Wanley on the subject of the sale of Covel's manuscripts and books to the Earl of Oxford. The sale was finally made on 27 Feb. 1715–16, the price paid by the earl being 300*l.* Some of the books which were missing were to be delivered when they were found. Part, at least, of the collection of New Testament MSS. is now in the British Museum. Besides these, there are three volumes, chiefly of travels; the largest, containing an account of Covel's voyage in 1670, is divided into chapters, and written as if for publication; the smallest (22913) contains a journal of the tour in Italy. MS. 22914 has a few autobiographical notes. It is probable that Hearne's entry of 'Dr. John *Cowell's* (Head of *Bennet* Coll. Camb.) Itinerary thro' Greece' as a book which would be 'of great advantage to the Republick of Letters' refers to Covel's journals, and not to the work he published in 1722. Covel died unmarried.

[Davy's Athenæ Suffolc. Add. MS. 19166, ii. 95; Cole's Manuscript Collections, xx. fol. 72; Covel's Journals and Correspondence, Add. MSS. 22910–14; Pearson's Chaplains of the Levant Co. 16; G. Williams's The Orthodox . . . and the Nonjurors, xii.; Nichols's Leicestershire, iii. 856, 859; Strickland's Queens of England, vii. 100–3; Sidney's Diary of Time of Charles II (ed. Blencowe); Biog. Brit. iii. 1488; Hearne's Collections (Doble), i. 86.] W. H.

COVELL, WILLIAM, D.D. (*d.* 1614?), divine, a native of Chatterton, Lancashire, received his academical education at Christ's College, Cambridge, and was elected a fellow of Queen's College in that university in July 1589. The dates of his degrees are as follows: B.A. 1584, M.A. 1588, D.D. 1601. On 2 Jan. 1595–6 Dr. Goade, vice-chancellor of the university, complained to Lord Burghley that Covell, in a sermon at St. Mary's, had railed against noblemen and bishops (*Lands. MS.* 80, art. 53; Heywood and Wright, *University Transactions*, ii. 87). He was collated by the Archbishop of Canterbury to the vicarage of Sittingbourne, Kent, 27 Jan. 1602–3, and he also held the living of Leaveland in the same county, resigning it on 9 May 1603. He was appointed sub-dean of Lincoln 11 Sept. 1609. In the following year he was nominated one of the original fellows of 'King James's College at Chelsea,' which was founded by Dr. Matthew Sutcliffe for the maintenance of polemical divines who were to be employed in writing against the doctrines of the Roman catholic church (Faulkner, *Chelsea*, ii. 225). He was collated to the prebend of All Saints in Hungate, in the church of Lincoln, 22 Sept. 1612, and he probably died in 1614, in which year his successor in that dignity was nominated.

His works are: 1. 'A Just and Temperate Defence of the Five Books of Ecclesiastical

Polity, written by Mr. Richard Hooker; against an uncharitable "Letter of certain English Protestants (as they call themselves) craving resolution in some matters of doctrine,"' London, 1603, 4to; reprinted in vol. ii. of Hanbury's edition of Hooker's 'Works,' ii. 449–568. 2. 'A modest and reasonable Examination of some things in vse in the Church of England, sundrie times heretofore misliked, and now lately, in a Booke called the (Plea of the Innocents) and an Assertion for true and Christian Church Policy,' London, 1604, 4to. 3. 'A briefe Answer vnto certaine Reasons by way of an Apologie deliuered to the Right Reuerend Father in God, the L. Bishop of Lincolne, by Mr. Iohn Bvrges,' London, 1606, 4to.

[Carter's Univ. of Cambridge, pp. 180, 233; Richardson's Athenæ Cantab. MS. p. 46; Le Neve's Fasti (Hardy), ii. 41, 101; Horne's Cat. of Library of Queens' Coll. Camb. p. 98; Cooper's MS. Collections for Athenæ Cantab.; Cat. of Printed Books in Brit Mus.; Watt's Bibl. Brit.]

T. C.

COVENTRY, ANNE, Countess of Coventry (1673–1763), religious writer, born in 1673, was the daughter of Henry Somerset, third marquis and first duke of Beaufort, by Mary, daughter of Arthur, lord Capel, and widow of Henry, lord Beauclerk. Before 1700 she married Thomas, second earl of Coventry, by whom she was the mother of Thomas, third earl. Her husband died in 1710 and her son on 28 Jan. 1712. She took up her permanent residence at her late husband's house at Snitterfield, Warwickshire, in 1726, and died there 14 Jan. 1763, aged 90, after a widowhood of fifty-three years. She was buried with her father at Badminton. The countess was renowned for her charity and piety. In 1707 appeared in duodecimo 'The Right Honourable Anne, Countess of Coventry's Meditations and Reflections, Moral and Divine.' A frontispiece by Berchet represents the authoress at prayer. Perfect copies of this volume are now very rare. The countess's friend, Richard Jago, vicar of Snitterfield, preached a biographical sermon after her death, which was printed at Oxford in 1763 under the title of 'The Nature of a Christian's Happiness in Death.'

Another Anne, Countess of Coventry (1690–1788), born in 1690, was daughter of Sir Streynsham Masters of Codnor Castle, Derbyshire, and became the second wife of Gilbert, fourth earl of Coventry, shortly before his death in 1719. In 1725 she married Edward Pytts of Kyre, Worcestershire, by whom she had five daughters. She died on 21 March 1788, aged 98. This lady was the plaintiff in an important lawsuit which she brought against William, fifth earl of Coventry, a distant relative of the fourth earl, to compel him to give effect to a defectively executed settlement made on her first marriage. The suit, heard 18 May 1724, was decided in her favour. A full report was appended by Richard Francis to his 'Maxims of Equity,' 1728.

[Chambers's Worcestershire Biography, 322, 590; Gent. Mag. 1763, p. 277, 1788, pt. i. 277; Burke's Extinct Peerage; Brit. Mus. Cat.]

S. L.

COVENTRY, FRANCIS (*d.* 1680), Franciscan. [See Davenport, Christopher.]

COVENTRY, FRANCIS (*d.* 1759?), miscellaneous writer, a native of Cambridgeshire, was educated at Magdalene College, Cambridge, where he proceeded B.A. 1748 and M.A. 1752. He is the author of 'Penshurst, a poem, inscribed to William Perry, esq., and the Hon. Mrs. Elizabeth Perry,' 1750, 4to, reprinted in vol. iv. of 'Dodsley's Miscellanies;' and of the fifteenth number of the 'World,' 12 April, 1753, containing 'Strictures on the Absurd Novelties introduced in Gardening.' He also wrote a satirical romance, 'Pompey the Little, or the Adventures of a Lapdog,' 1751 (5th ed. 1773), which Lady Mary Wortley Montagu preferred to 'Peregrine Pickle.' Several characters were intended for ladies well known in contemporary society. He was appointed by his relative, the Earl of Coventry, to the perpetual curacy of Edgware, and died of small-pox at Whitchurch about 1759.

[Nichols's Lit. Anecd. v. 569; Cole's Athenæ.]

COVENTRY, HENRY (1619–1686), secretary of state, the third son by the second marriage of Thomas, first lord Coventry [q. v.], brother of Sir William Coventry [q. v.], uncle of Sir John Coventry [q. v.], and brother-in-law of Anthony Ashley Cooper, first earl of Shaftesbury [q. v.], after studying at All Souls College, Oxford, graduated in both arts and law. In the civil wars he adhered to the king's party, and accompanied Charles II in his exile, during part of which time he was employed as royalist agent in Germany and Denmark, in company with Lord Wentworth, until the concert was dissolved by a violent quarrel, leading apparently to a duel (*Calendar of Clarendon State Papers*, ii. 332; 6 April 1654). The notices of him at this date are very confused; Henry, his elder brother Francis, and his younger brother William being all attached to the exiled court and all commonly spoken of as Mr. Coventry. Before the Restoration Francis had ceased to take any active part

in public affairs, and William had devoted himself more especially to the service of the Duke of York, whose secretary he continued to be while the duke held the office of lord high admiral. Henry, who was M.P. for Droitwich 1661–81, remained in the service of the crown, and in Sept. 1664 went as ambassador to Sweden, where he remained for two years, 'accustoming himself to the northern ways of entertainment, and this grew upon him with age' (Burnet, *Hist. of his own Time*, Oxford, 1823, i. 531). In 1667 he was sent, jointly with Lord Holles, as plenipotentiary to negotiate the treaty of peace with the Dutch, which, after the disgraceful summer, was finally concluded at Breda. In 1671 he was again sent on an embassy to Sweden, and on his return was appointed secretary of state. In this office he continued till 1680, when his health, which was shattered by frequent attacks of gout, compelled him to retire from public life. According to Burnet 'he was a man of wit and heat, of spirit and candour. He never gave bad advices; but when the king followed the ill advices which others gave, he thought himself bound to excuse if not to justify them. For this the Duke of York commended him much. He said in that he was a pattern to all good subjects, since he defended all the king's counsels in public, even when he had blamed them most in private with the king himself' (*ib. loc. cit.*) It is to his credit that after holding public office for nearly twenty years he had not accumulated any large fortune; and though no doubt in easy circumstances, he wrote of himself as feeling straitened by the loss of his official salary on 31 Dec. 1680. He died in London on 7 Dec. 1686. He was never married. Writing to Sir Robert Carr on 12 Sept. 1676, and regretting his inability to fulfil some promise relative to a vacant post, he said: 'Promises are like marriages; what we tie with our tongues we cannot untie with our teeth. I have been discreet enough as to the last, but frequently a fool as to the first.'

[Collins's Peerage (5th ed. 1779), iv. 163; Clarendon State Papers, and Calendar of Clarendon State Papers (see Index); Calendars of State Papers (Domestic), 1660–7; British Museum, Add. MS. 25125: this is a collection of private letters, including several to Francis Coventry, which give some curious hints as to his peculiar troubles both in his money matters and in his family.] J. K. L.

COVENTRY, HENRY (*d.* 1752), miscellaneous writer, a native of Cambridgeshire, born about 1710, was educated at Magdalene College, Cambridge, where he graduated B.A. in 1729, and was elected to a fellowship, proceeding M.A. in 1733. He was the author of 'Philemon to Hydaspes, relating a conversation with Hortensius upon the subject of False Religion,' in five parts, 1736–37–38–41–44, 8vo. Warburton accused Coventry of making unfair use of information, confidentially communicated, which was about to be published in the second volume of the 'Divine Legation.' A pamphlet entitled 'Future Rewards and Punishments believed by the Antients,' 1740, has been attributed to Coventry, who was also one of the contributors to the 'Athenian Letters.' He died 29 Dec. 1752. Cole, who had met him frequently in the society of Conyers Middleton and Horace Walpole, remarks: 'He used to dress remarkably gay, with much gold lace, had a most prominent Roman nose, and was much of a gentleman.' The five parts of 'Philemon to Hydaspes' were republished in one vol. 1753, by his cousin, Francis Coventry [q. v.]

[Nichols's Literary Anecdotes, iii. 43, v. 564–71, ix. 801; Cole's Athenæ; Walpole's Letters, ed. Cunningham, i. 7.]

COVENTRY, Sir JOHN (*d.* 1682), M.P. for Weymouth, was son of John Coventry, second son of Lord-keeper Thomas Coventry [q. v.] His mother belonged to a Somerset family named Colles. His father is described by his friend and brother-in-law the first Earl of Shaftesbury as 'every way an extraordinary person,' who ruined his great mental gifts by drink. The father John was first elected to the Long parliament for Evesham in 1640, and as a zealous cavalier was disabled from sitting in the House of Commons in 1645. The son John served in the royalist army, and his attachment to the crown was so well known that he was made a knight of the Bath on the coronation of Charles II in 1661. He was elected M.P. for Weymouth on 25 Jan. 1667, and though his uncles Henry and William were both in office, he at once went into opposition. In 1670 the opponents of the government proposed in parliament to levy a tax on playhouses, and in the course of the debate Coventry asked 'whether did the king's pleasure lie among the men or the women that acted?' The allusion was obviously intended to apply to Nell Gwyn and Moll Davies. The king's friends expressed great indignation and prepared to avenge the insult. On 21 Dec., while on his way home to his house in Suffolk Street, Coventry was taken out of his carriage by a band of ruffians, headed by Sir T. Sandys, and his nose slit to the bone. This deed caused the greatest excitement in the House of Commons, and a special act was passed (22 & 23 Car. II, c. 1)

declaring nose-slitting or other mutilation of the person to be felony without benefit of clergy. Coventry's assailants were never captured. The act was known as the Coventry Act. Coventry was re-elected for Weymouth in 1678, 1679, and 1681, but made no mark in politics. He died in 1682.

[Burke's Peerage; Pepys's Diary, ed. Braybrooke; Hallam's Constitutional History of England; Burnet's History of his own Time; Reresby's Diary; Shaftesbury Papers, ed. Christie.]

H. M. S.

COVENTRY, JOHN (1735–1812), constructor of philosophical instruments, was born in Southwark in 1735. He made a position through the care with which his instruments were made. He was the inventor of a new hygrometer, more accurate than any which had been previously in use. This instrument was very generally employed by the chemists and other scientific men of his day. His telescopes were found to be more accurately adjusted than those usually employed, and the lenses with which they were fitted were more truly ground. His graduations were especially correct. He was a friend of Benjamin Franklin, who appears to have consulted him on questions connected with electrical apparatus. Coventry died in 1812.

[General information from private sources.]

R. H–t.

COVENTRY, MARIA, Countess of (1733–1760), elder daughter of John Gunning of Castle Coote, co. Roscommon, and Bridget, daughter of the sixth viscount Mayo, was born in 1733. She and her sister Elizabeth, both famed for their beauty, were so poor, that they thought of going on the stage, and when they were presented to Lord Harrington, the lord-lieutenant of Ireland, borrowed clothes from Mrs. Woffington, the actress. On their appearance in London in the summer of 1751, when Maria was in her eighteenth year, and Elizabeth about a year younger, they were at once pronounced to be 'the handsomest women alive.' Singly, Horace Walpole says, they were surpassed by others, but it was extraordinary that two sisters should be so beautiful in face and figure. Crowds followed them whenever they appeared in public, and they were generally called 'The Beauties.' Of the two, Maria was the more lovely. They were both lacking in sense and knowledge of the world. It is said that one day when they were going over Hampton Court, the housekeeper, wishing to show the company the room containing Kneller's pictures, or the Hampton Court beauties, cried, 'This way, ladies, for the beauties,' and that on this the sisters flew into a passion, and said that they were come to see the palace, and not to be shown as a sight. On 5 March 1752, less than three weeks after her sister had married the Duke of Hamilton, Maria married George William, sixth earl of Coventry. In the summer she went to France, but the Parisians laughed at her silliness, her want of breeding, and her ignorance of French, and would scarcely allow that she was beautiful. Her tour was not altogether a happy one, for her husband appears to have been jealous and petulant, and they had several squabbles. On her return she was universally considered the most beautiful woman of the court. She flirted considerably, especially with Viscount Bolingbroke. The old king took a great deal of notice of her, and was much amused when one day, with characteristic foolishness, she told him that she longed to see a coronation. People were never tired of running after her, and one Sunday evening in June 1759 she was mobbed in Hyde Park. The king ordered that, to prevent this for the future, she should have a guard, and on the next Sunday she made herself ridiculous by walking in the park from 8 till 10 p.m. with two sergeants of the guards in front with their halberds, and twelve soldiers following her. In the course of the winter she was attacked by consumption, but recovered sufficiently to be present at the trial of Lord Ferrers in the following April. She lingered through the summer, and died on 1 Oct. 1760. It was said that her health was injured by the use of white lead, to which she, in common with other ladies of fashion, was greatly addicted. Throughout her last illness her personal appearance was, as ever, her chief care. After she took to her bed she would have no light in her room except the lamp of a tea-kettle, and would never allow the curtains of her bed to be undrawn lest others should see the ravages disease had made. Mason wrote an elegy on her. She had five children: George William, afterwards seventh earl of Coventry, and four daughters. Her brother, General Gunning, was the husband of Susannah Minifie, the novelist.

Lady Coventry's portrait was five times engraved in mezzotint, after paintings by Francis Cotes, Read, Hamilton, and Liotard (Bromley, *Cat. of Engraved Portraits*, p. 305). An etching by B. Wilson is dated 1751.

[Horace Walpole's Letters (Cunningham), ii. 259, 265, iii. 233, 358; Memoirs of George III, iii. 190; Mahon's Chesterfield, iv. 10, 45; Jesse's George Selwyn and his Contemporaries, i. 162–71; Collins's Peerage of England, iv. 170.]

W. H.

COVENTRY, Sir THOMAS (1547–1606), judge, second son of Richard Coventry of Cassington, Oxfordshire, was born in 1547, and educated at Balliol College, Oxford, of which he was a fellow, and where he graduated B.A. on 2 June 1565. He studied law at the Inner Temple. His first appearance as a pleader is in a case reported by Croke in Michaelmas term 1589. He was elected reader at the Inner Temple in the autumn of 1593, but, in consequence of an outbreak of plague, his reading was postponed over the winter, and a new serjeant, John Heale, being appointed in the spring, took precedence of him, so that he did not read until the autumn of 1594. In the canvass for the post of solicitor-general, which took place on Coke's appointment to the attorney-generalship (1594–5), Coventry played an active part, and was suspected of having bought Sir Robert Cecil's interest for two thousand angels, as appears from a very blunt letter from Bacon to Cecil, which though undated is probably referable to this period. In 1603 he was appointed serjeant-at-law, in 1605–6 king's serjeant, and in the same year justice of the common pleas, and knighted. He died on 12 Dec. 1606. He was buried at Earle's Croome, otherwise Croome d'Abitot, Worcestershire. According to Dugdale he descended from John Coventrie, mercer, co-sheriff of London with Robert Wydington (no connection of R. Whittington) in 1416, and lord mayor of London in 1425. By his wife, Margaret Jeffreys, of Earle's Croome, he had 3 sons and 4 daughters. His eldest son, Thomas [q. v.], was lord keeper in the reign of James I; from the youngest, Walter, the Earl of Coventry traces his descent.

[Reg. of Univ. of Oxford, i. 258; Wood's Fasti Oxon. i. 167; Dugdale's Orig. 166, Chron. Ser. 101, 103; Croke's Reports (Eliz.), p. 158; Spedding's Life and Letters of Bacon, i. 288, 348, 355; Collins's Peerage (Brydges), iii. 744; Dugdale's Baronage, ii. 459; Foss's Judges.] J. M. R.

COVENTRY, THOMAS, first **Baron Coventry** (1578–1640), lord keeper, eldest son of Sir Thomas Coventry [q. v.], was born in 1578 at Earl's Croome, or Croome d'Abitot, Worcestershire. After a private education he was sent to Balliol College, Oxford, in Michaelmas term 1592, but took no degree, and in November 1594 entered the Inner Temple. Coke's reports mention him as an advocate in 1611. With his friends Henry Yelverton and James Whitelocke he joined the Oxford circuit; became bencher of his inn in 1614, autumn reader in 1616, and was elected treasurer for each year between 1617 and 1623. Coventry was noticed favourably by Coke, and thus incurred Bacon's enmity. In 1616 he was a candidate for the recordership of the city of London, and Bacon wrote to the king (13 Nov.): 'The man upon whom the choice is like to fall, which is Coventry, I hold doubtful for your service; not but that he is well learned and an honest man, but he hath been, as it were, bred by Lord Coke and seasoned in his ways' (Spedding, *Life of Bacon*, vi. 97). In spite of this opposition Coventry was elected recorder on 16 Nov. Four months later he obtained the solicitor-generalship (14 March 1616–17), and was knighted at the same time. He owed his preferment to the influence of friends and to his reputation as a sound lawyer whose political opinions, although not extreme, coincided in the main with those of the king's supporters. In 1620 he was M.P. for Droitwich. On 11 Jan. 1620–1 he succeeded Sir Henry Yelverton as attorney-general. Almost his first duty was to request of Bacon specific answers to the charges of corruption brought in parliament. In April 1621 he was concerned in the proceedings against Edward Floyd, a Roman catholic, who was reported to have rejoiced over the misfortunes of the elector palatine after the battle of Prague, but he deprecated the brutal sentence passed by the commons. On 1 Nov. 1625 Coventry was summoned to supply Bishop Williams's place as lord keeper of the great seal. When accepting office he thanked the Duke of Buckingham for the favour he had bestowed on him in phrases which, although courtly, showed an independence unusual in contemporary officers of the crown, and he acknowledged very modestly congratulations from Bacon (Spedding, vii. 534–5). As lord-keeper, Coventry opened the second parliament of Charles I's reign, and before the close delivered the king's reprimand of the unruly house, which declined to grant an adequate supply without redress of grievances. The commons, he said, had liberty of counsel but not of control (29 March 1626). In May he drew up the questions to be propounded to Sir John Eliot, then under arrest; his manuscript is still at the Record Office. When opening the third parliament in March 1627–8 he announced the royal threat that the prerogative of the crown would be exercised without appeal to parliament in case of further insubordination, and henceforth steadily supported the king, although he treated Buckingham without much respect. On 10 April he was created Baron Coventry of Aylesborough, Worcestershire. When Buckingham applied to him soon afterwards for the office of lord high constable, Coventry declined to grant it him, and a personal altercation ensued. Buckingham taunted Coventry with holding

the lord keepership by his favour. 'Did I conceive I held my place by your favour,' Coventry replied, 'I would presently unmake myself by rendering the seal to his majesty.' It is probable that Buckingham would have driven Coventry from office and have replaced him by a more servile instrument had his attention not been absorbed in foreign affairs for the few months which elapsed before his assassination in August (HACKET, *Life of Williams*, ii. 19). Meanwhile Coventry was actively engaged in parliament. In the debates in the lords on the council's powers of commitment he argued that the council need not show cause (22 April 1628), and six days later, when Noy's Habeas Corpus Bill was before the commons, he told them that they must be content with the king's verbal promise to administer the existing law of the land. In the following month, when the Petition of Right was under discussion, he gave the more moderate opinion that no man ought, except in very special circumstances, to be imprisoned without cause shown. In June, when the debate was at its height, he informed Charles that a dissolution would not solve the difficulty, and persuaded him to assent to the petition in the ordinary formula. But in October Coventry complained (without taking further action) of the conduct of the judges in bailing Richard Chambers [q. v.] without the council's consent; dissented in vain from Charles I's resolution to dissolve parliament summarily in March 1628–9, and endeavoured in September to bring about a compromise on the question of bailing the seven members of parliament imprisoned by Charles since March. He suggested that security should be given for their good behaviour during the vacation, but this concession the prisoners declined. In October Coventry was ordered by Charles I to inform Sir John Walter [q.v.], the chief baron of the exchequer, that his services were no longer needed on the bench. Coventry drew up and enforced a royal proclamation in June 1632, according to which gentlemen living in the country were temporarily banished from London; sentenced Lord Audley to death after his trial by his peers in the same year (RUSHWORTH, ii. 96); joined with Laud in bringing a charge of corruption against the Earl of Portland in the council in May 1634, and strongly opposed Portland's scheme of a Spanish alliance. A month later he announced his approval of Noy's scheme of levying shipmoney, and in June 1635 he addressed a powerful speech to the council in which he foreshadowed the danger to England of a maritime war and justified the extension of the shipmoney tax to the inland towns. 'The dominion of the sea,' he said, 'as it is an ancient and undoubted right of the crown of England, so it is the best security of the land. The wooden walls are the best walls of this kingdom' (RUSHWORTH, ii. 294). But he said nothing as to the king's right to levy the tax, and he took no part at all in the great case of Hampden. In the Star-chamber Coventry was usually, although not invariably, on the side of clemency. In March 1626–7 he resolutely opposed the infamous doctrine that men refusing to be impressed could be hanged. He deprecated any harsh sentence on Henry Sherfield, M.P. for Salisbury, who had quarrelled with the bishop of the diocese on the question of painted windows in parish churches (February 1632–1633). In April 1635 one James Maxwell and his wife Alice stated in a petition to the king that Coventry disobeyed the crown and oppressed the subject. Maxwell was prosecuted in the Star-chamber and ordered to pay 3,000*l.* to Charles and the same sum to Coventry. Coventry was absent when Prynne was before the court. His royalist zeal seems to have much abated in his last years, and he withheld support from the king's resolve to enforce the payment of a loan by the city of London (June 1639). He himself lent the king 10,000*l.* in December, and died at Durham House in the Strand on 14 Jan. 1639–40, being buried at Croome d'Abitot. The writs summoning the Short parliament were issued before his death, and in a dying message he begged that 'his majesty would take all distastes from the parliament summoned against April with patience and suffer it without an unkind dissolution' (HACKET, ii. 137). Besides Durham House, Coventry rented Canonbury House, Islington.

Coventry was personally popular, and all moderate men lamented his death. Clarendon states that 'he understood not only the whole science and mystery of the law at least equally with any man who had ever sate in that place, but had a clear conception of the whole policy of the government both of church and state. . . . He knew the temper, disposition, and genius of the kingdom most exactly. . . . He had, in the plain way of speaking and delivery, without much ornament of elocution, a strange power of making himself believed.' Antony à Wood, Fuller, Lloyd, and his colleague on the bench, Sir George Croke, all write of him in similar terms. Whitelocke denies him 'transcendent parts or form,' and Pepys reports a depreciatory estimate of him. Wood attributes to Coventry a tract on 'The Fees of all Law Offices,' London, 8vo, n.d. Letters of Coventry are preserved in Cotton MS. Julius C. iii. f. 140, and Harl. MSS. 286, 1581, 2091.

Coventry married (1) Sarah, daughter of Sir Edward Sebright of Basford, Worcestershire, and (2) Elizabeth, daughter of John Aldersey of Spurstow, Cheshire, and widow of William Pitchford. By his first wife he had a son, Thomas, and a daughter, Elizabeth. Thomas succeeded him as second Baron Coventry; married (2 April 1627) Mary (*d.* 18 Oct. 1634), daughter of Sir William Craven; executed the commission of array in Worcestershire in 1640; signed the engagement with the king at York in 1642; died 27 Oct. 1661, and left two sons, of whom the younger, Thomas, was created earl of Coventry on 26 April 1697. By his second wife he had four sons (John, father of Sir John Coventry [q. v.], Francis, Henry [q. v.], and William [q. v.]) and four daughters (Anne, wife of Sir William Savile, and mother of George Savile, marquis of Halifax; Mary, wife of Henry Frederick Thynne of Longleat, Wiltshire; Margaret, first wife of Anthony Ashley Cooper, first earl of Shaftesbury [q. v.]; and Dorothy, wife of Sir John Pakington).

A portrait by 'Old Stone' belonged to Sir William Coventry (Pepys, ii. 404), which is probably identical with the existing picture belonging to the Earl of Coventry at Croome Court, Worcestershire; another, by Jansen, belonged to Edward Hyde, earl of Clarendon, and is now at Grove Park, Watford. Five engraved portraits (by Droeshout, Elstracke, Houbraken, Martin, and Vandergucht) are known.

COVENTRY, WALTER of (*fl.* 1293?), historical compiler, gives his name to a volume of historical collections, entitled 'Memoriale Fratris Walteri de Coventria,' written soon after 1293. Nothing more is known about him. It is, of course, probable that he was a native of Coventry, and it has been conjectured from some slight indications in the 'Memoriale' that he was a monk of York. A manuscript in the Bodleian Library (355), entitled 'Walteri Coventrensis Chronicon,' has been wrongly ascribed to him; it is in a late hand (Hardy); nor does it appear that the Cottonian MS. (Vitell. D. v.) entitled 'Gualteri Conventriensis Historia,' and now destroyed, should have borne his name (Stubbs). The first part of the 'Memoriale' is of no historical value; the second part, which deals with the history of England from 1002 to 1225, is an abridgment and 'compilation from a compilation' from Florence, Henry of Huntingdon, and Roger of Hoveden, with a continuation derived from the 'Barnwell Chronicle,' which comprises the annals of the reign of John, and is of great value. This part of the work has been published in a mutilated form in the 'Recueil des Historiens' (Bouquet, xviii. 164), as a continuation of Hoveden; it was first edited in its entirety by Bishop Stubbs for the Rolls Series.

COVENTRY, WILLIAM of (*fl.* 1360), Carmelite. [See William.]

COVENTRY, Sir WILLIAM (1628?–1686), politician, born about 1628, was fourth son of Thomas, lord Coventry [q. v.], by his second wife, Elizabeth Aldersey. He became a gentleman-commoner of Queen's College, Oxford, in 1642, but left the university without taking a degree. 'He was young,' writes Clarendon in his autobiography (1759, ii. 348), 'whilst the war continued; yet he had put himself before the end of it into the army, and had the command of a foot company, and shortly after travelled into France, where he remained whilst there was any hope of getting another army for the king, or that either of the other crowns would engage in his quarrel. But when all thoughts of that were desperate, he returned into England, where he remained for many years without the least correspondence with any of his friends beyond the seas.' On 22 June 1652 Hyde wrote to Secretary Nicholas that Coventry 'had good parts, but was void of religion.' Just before the Restoration he went to the Hague and visited the royal princes, to whom he was already personally known (1660). To James, duke of York, he offered his services, and he was straightway appointed the duke's private secretary. On returning to England he was elected to the parliament which met in May 1661 as M.P. for Great Yarmouth, and when the Duke of York became general-at-sea, Coventry was largely concerned in the administration of the navy, and in 1662 was appointed a commissioner at 300*l.* a year. He thus came into business relations with Pepys, who quickly became warmly attached to him, and Coventry is continually mentioned in the 'Diary.' Reports were soon disseminated that Coventry was 'feathering his nest' by a sale of offices, and quarrels with his fellow-

commissioner, Sir George Carteret, whose directions he claimed to have faithfully followed, were perpetual. He admitted subsequently that, like everybody else, he did make money by selling offices (Pepys, 28 Oct. 1667). In October 1662 Coventry was made a commissioner for the government of Tangier. He was created D.C.L. at Oxford 28 Sept. 1663, together with Henry Bennet, earl of Arlington (Wood, *Fasti* (Bliss), ii. 275), and was knighted and sworn of the privy council 26 June 1665. In the course of the Dutch war charges of corruption in connection with the commissariat were again brought against Coventry, but he denied them vehemently in letters to the king, and subsequently took active measures to reduce the expenditure of his department. Meanwhile Coventry was distinguishing himself as a speaker in the House of Commons. Burnet describes him about 1665 as 'a man of great actions and eminent virtues, the best speaker in the house, and capable of braving the chief ministry.' He attached himself to Bennet, afterwards Earl of Arlington, and made very fierce attacks on Clarendon's administration. He denied any kind of responsibility for the declaration of war with the Dutch in Feb. 1664–5, but during that and two following sessions he and his brother Henry [q. v.] practically led the house. Marvell, writing in 1667, says:—

> All the two Coventries their generals choose;
> For one had much, the other nought to lose.
> Not better choice all accidents could hit,
> While hector Harry steers by Will the wit.

Coventry's speeches in the House of Commons immediately contributed to Clarendon's fall in 1667, but when the change of government took place at the end of August, he remained in the subordinate office of a commissionership of the treasury, to which he had been appointed in the preceding June. The Duke of York resented Coventry's attitude to Clarendon, and told him so (30 Aug. 1667). Three days later Coventry resolved to leave the duke's service. He declared that this step was nowise connected with his attitude to Clarendon. Coventry told Pepys at the time that he regarded Clarendon as an incapable minister, but that he had no wish to seek political advancement by identifying himself with any faction (28 Oct. 1667). Coventry's frankness and independence had raised up many enemies, and in March 1668–9 he was informed that the Duke of Buckingham and Sir Robert Howard were contemplating a caricature of him on the stage. He thereupon sent a challenge to the duke. As soon as the fact came to the king's knowledge, Coventry was sent to the Tower. He was at the same time excluded from the privy council and the treasury, but this indignity was doubtless cast upon him by the influence of his political rivals—'to make way for the lord Clifford's greatness and the designs of the cabal.' His friends visited him in the Tower in large numbers. On 9 March he petitioned for the royal pardon, and on 20 March he was released. Coventry remained in parliament till 1679 when he finally retired to a country house at Minster Lovell, near Witney, Oxfordshire, interesting himself in local affairs and entertaining friends from Oxford. He tried to reduce the expenses attaching to the office of sheriff of the county from 600*l.* to 60*l.*, and drew up regulations for the purpose. No offer of posts at court could draw him back to public life, although Temple and Burnet concur in stating that at one time almost any office was at his disposal. He died unmarried at Somerhill, near Tunbridge Wells, 23 June 1686, and was buried at Penshurst. He bequeathed 2,000*l.* to French protestants expelled from France, and 3,000*l.* for the redemption of captives in Algiers. Burnet and Temple credit Coventry with the highest political ability, and Clarendon, who naturally writes of him with acerbity, does not deny it. Evelyn calls him 'a wise and witty gentleman.'

Coventry's political views are defined in 'The Character of a Trimmer,' which came out in 1688 with a title-page ascribing it to 'the Honourable Sir W. C.' It was printed from a copy found among Coventry's papers, but the author was George Savile, Marquis of Halifax [q. v.], Coventry's nephew. This is a vindication of the presence of a middle political party, unconnected with either of the two recognised parties in parliamentary warfare. 'The second edition, carefully corrected and cleared from the Errors of the first Impression,' was issued in 1689, and bore the name of 'The Honourable Sir W. Coventry' on the title-page. The third edition (1697) is described as 'By the Honourable Sir W. Coventry, Corrected and Amended by a Person of Honour.' The advertisement here states 'that it is the production of Sir William Coventry's Contemplation, who was universally reputed as an acute Statesman, an accomplisht Gentleman, a great Schollar, and a true Englishman, and stands obliged to the great care of the late [George Savile] M[arquis] of Hallifax [he died 1695], who thought it worthy of a strict and nice perusal, and with his own Pen delivered it from innumerable Mistakes and Errors that stuff'd and crowded the former Edition.' Had the marquis lived, the public would have seen it 'revised with a second Inspection and published by his particular order.' In a letter

to a nephew, Thomas Thynne (preserved at Longleat), Coventry denied the authorship, although he admitted himself to be a Trimmer, a title which he defines as 'one who would sit upright and not overturn the boat by swaying too much on either side.' The work appeared in Halifax's 'Miscellanies' (1704), and was reprinted separately in 1833. Halifax's exclusive responsibility is now well established (cf. FOXCROFT's *Life and Letters of Halifax, with his works*, 1898, 2 vols.)

Coventry sent to press 'England's Appeal from the Private Cabal at White-hall to the Great Council of the Nation, the Lords and Commons in Parliament assembled, by a True Lover of his Country,' anno 1673; and 'A Letter Written to Dr. Burnet, giving an Account of Cardinal Pool's [i.e. Pole's] Secret Papers,' 1685—a reprint of some letters by Pole, found by Coventry, and correcting some statements in Burnet's 'History of the Reformation.'

Many of his papers are among the Ashburnham MSS. and Longleat MSS., among the latter being a catalogue of his own and his brother Henry's libraries, which were sold 9 May 1687. Coventry told Pepys that he invariably kept a journal.

[Pepys's Diary, passim; Evelyn's Diary; Burnet's own Time; Wood's Athenæ (Bliss), iv. 190; Macaulay's Hist. i. 244; Clarendon's Autobiography; Clarendon State Papers; Hist. MSS. Comm. Rep. iv. v. vi.; Christie's Shaftesbury, i. 21; Foxcroft's Halifax.] S. L.

COVERDALE, MILES (1488–1568), translator of the Bible, was born in 1488, 'patria Eboracensis,' says his friend and contemporary Bale (*Scriptores*, 1557–9, p. 721), and Whitaker assumes the surname to have been taken from the district of his birth, Cover-dale, in what is called Richmondshire, in the North Riding (*History of Richmondshire*, i. 16, 107). A William Coverdale, 'granator' of Richmondshire, is mentioned in Brewer's 'Letters and Papers of Henry VIII,' 1529 (iv. pt. iii. p. 2359). Coverdale was from his childhood given to learning (J. VOWELL alias HOOKER, *Catalog of the Bishops of Exceter*, 1584). He studied philosophy and theology at Cambridge, was admitted to priest's orders at Norwich in 1514 by John, bishop of Chalcedon, and entered the convent of Austin friars at Cambridge (TANNER, *Bibliotheca*, 203), where he fell under the influence of Robert Barnes [q. v.], who became prior about 1523. He was a visitor at Sir Thomas More's house, and made the acquaintance of Thomas Cromwell [q. v.], afterwards a powerful friend. An undated letter to Cromwell 'from the Augustin's this May-day,' but prior at least to 1527, says Mr. Gairdner, shows his religious inclinations at that period. In it he states that he begins now to taste of holy scriptures, but requires books to help him to a knowledge of the doctors. He desires nothing but books, and will be guided by Cromwell as to his conduct and in the instruction of others (*Letters and Papers of Henry VIII*, v. 106, given in full in *State Papers, Henry VIII*, 1830, i. 383–4). In another letter to Cromwell, dated 27 Aug. 1527, he says he would be delighted to come to London if he knew that his correspondent wished it (*Remains*, 1846, pp. 491–2). He was among those who attended the meetings at the White Horse, near St. John's, called 'Germany,' says Foxe (*Acts and Monuments*, 1684, ii. 436), because of the Lutheran opinions held there. Barnes was arrested on a charge of heresy, and sent to London for examination in February 1526. Coverdale escaped a personal accusation, and went to London to help Barnes to draw up his defence when in the Fleet. About this time Coverdale left the convent to give himself entirely to evangelical preaching, and assumed the habit of a secular priest. Early in 1528 he was at Steeple-Bumpstead, where Richard Foxe was minister, preaching against confession and the worshipping of images (*ib.* ii. 267). In 1531 he took the degree of bachelor of the canon law at Cambridge (COOPER, *Athenæ*, i. 268), and three years later brought out his first books: 'Ye Olde God and the Newe,' and 'Paraphrase upon the Psalmes,' both translations. Foxe says that Coverdale was with Tyndale at Hamburg in 1529, and assisted him in the translation of the Pentateuch (ii. 303); but there is no confirmatory evidence of the latter statement. The biographers have been unable to account for his movements between 1528 and 1535, but agree that most of the time was passed abroad.

On 19 Dec. 1534 convocation resolved to petition the king for an English translation of the Bible, and Strype says that Cranmer (*Life*, i. 34, 38) made an endeavour to bring about the design by co-operation. The want was, however, supplied by a foreign publisher, who issued a folio volume, dated 1535, with the title: 'Biblia. The Bible, that is the Holy Scripture of the Olde and New Testament, faithfully and truly translated out of Douche and Latyn into Englishe.' The dedication to Henry VIII is signed 'Myles Couerdale,' who submits his 'poore translacyon unto the spirite of trueth in your grace.' Some copies omit the words 'out of Douche and Latyn' from the intitulation, and have the title and the preliminary matter in an English type. Possibly this was the form in which the book was first issued in

England, where James Nicolson of Southwark may have been the producer. No entirely perfect copy is in existence, and only five or six have title-pages. These represent three issues, two in 1535 and one in 1536. The Bible was reprinted by Nicolson in folio and quarto form in 1537, and by Froschouer at Zurich in 1550. The bibliographical peculiarities are detailed in the 'Bible by Coverdale, 1535' (1867, 8vo), by Francis Fry, who points out (pp. 8–11) that the dedication to Queen Jane belongs to Nicolson's edition of 1537. The publisher and place of printing of the 1535 Bible have always been a mystery. Humphrey Wanley was the first who attributed it to Christopher Froschouer of Zurich. Mr. Fry drew up a list of fourteen persons who fixed the place either at Zurich, Frankfort (by Christian Egenolph), Cologne, or Paris. Mr. Fry was unable to obtain sufficient evidence to prove the claim of Froschouer, but Dr. Ginsburg possesses two leaves of a German-Swiss Bible which are printed in a type precisely similar to Coverdale's English version of 1535. The comma is not used. The general 'get up' and appearance are identical. The woodcuts are the same design, with minute differences in the engraving. The present writer has had the opportunity of comparing these leaves, which Dr. Ginsburg affirms to have belonged to a unique copy of a Bible printed by Froschouer at Zurich, 1529–30, 2 vols. folio, formerly in his possession. The larger types in the 1535 Bible had already been traced to Froschouer, but here for the first time we find the smaller type. The 1531 Bible used by Coverdale for his translation was in a single and larger volume, in larger type and with headings to the chapters. The discovery of this 1529–30 Bible goes far to settle the question of the printer of Coverdale's Bible. The large type is to be found in the German Bible of Mainz, 1534, and the Wittenberg of 1556. The woodcuts encircling the title and other engravings passed into Nicolson's possession, and were afterwards used by other printers.

In 1877 the late Mr. Henry Stevens, in the catalogue of the Caxton Exhibition, first drew attention to a remarkable statement by Simeon Ruytinck in a life of Emanuel van Meteren, appended to the latter's 'Nederlandtsche Historie,' 1614. In the French translation, published at the Hague in 1618, the words especially relating to the Bible and its publisher are as follow: 'Emanuel de Meteren, qui a esté fort diligent à amasser et mettre par escrit les choses contenues en ce livre, nasquit à Anvers le 9 de Juillet 1535. ... Son père [Jacob van Meteren] luy avoit faict apprendre en sa jeunesse l'art d'Imprimerie et estoit doüé de la cognoissance de plusieurs langues, et autres bonnes sciences, tellement que dès lors il sceust si bien distinguer la lumière des ténèbres, qu'il employa sa peine et monstra son zèle en Anvers à la traduction de la Bible Angloise, et employa à cela un certain docte escolier nommé Miles Conerdal [*sic*]' (f. 721). Mr. Stevens believed that Jacob van Meteren was not only the printer (at Antwerp) but also the translator of the Bible of 1535 (*The Bibles in the Caxton Exhibition*, 1878, pp. 38–42, 68–70). Although great weight is due to any statement of Henry Stevens, more recent evidence does not support the view that Jacob van Meteren was the translator and Coverdale merely 'the best proof-reader and corrector of his age.' In 1884 Mr. W. J. C. Moens reprinted a document from an original copy made in 1610, and which had been found by him in an old box in the Dutch Reformed Church in Austin Friars. This was an affidavit signed by Emanuel van Meteren, dated 28 May 1609, to the effect that 'he was brought to England anno 1550... by his father, a furtherer of reformed religion, and he that caused the first Bible at his costes to be Englisshed by Mr. Myles Coverdal in Andwarp, the w'h his father, with Mr. Edward Whytchurch, printed both in Paris and London' (*The Registers of the Dutch Reformed Church, Austin Friars*, 1884, p. xiv). With the exception of the place of printing and the addition of the name of Whitchurch (which may be a mistaken reference to the folio Bible of 1537 (Matthew's), this statement agrees with that of Ruytinck. It appears probable that the Bible was produced at the instance of Van Meteren, who paid Coverdale for his labours as translator, that this part of the work was done at Antwerp, and that Van Meteren got the volume printed by some other printer, who may have been Froschouer of Zurich. Nicolson seems to have bought the copies for sale in England.

The work must have occupied Coverdale a considerable period. The imprint states: 'Prynted in the yeare of our Lord 1535, and fynished the fourth daye of October.' The book is in a German black letter, in double columns, with woodcuts and initials. It contains the Apocrypha. In the prologue to his own second edition of 1550 Coverdale says: 'It was neither my labour nor desyre to have this worke put into my hande, nevertheless ... for the which cause (accordinge as I was desired), anno 1534, I took the more upon me to set forth this specyall translation;' and in the dedication to Edward VI: I 'was boldened in God sixteen yeares agoo to labour faithfully in the same.' He says

that the 'Holy Ghost moved other men to do the cost.' He was not the projector but the sole worker. He made little or no use of the original texts. The cancelled continental title announces that the Bible was translated 'out of Douche and Latyn,' and Coverdale expressly states that he had 'with a clear conscience purely and faithfully translated this out of five sundry interpreters.' These are supposed to have been the Vulgate, the Latin of Pagninus, Luther, the Zurich or German-Swiss, and Tyndale's Pentateuch and New Testament (J. EADIE, *English Bible*, 1876, i. 281). Dr. Ginsburg shows how Coverdale chiefly relied upon the Zurich Bible of 1531 (*Ecclesiastes*, 1861, app. ii., and in KITTO's *Cyclopædia of Biblical Literature*, 1862, i. 567–9), whence he translated the headings of the chapters. Most of the notes are also from this source (EADIE, i. 286, &c.) Many quaint renderings are given by Eadie (*ib.* 298–301). The New Testament, chiefly based on Tyndale, is superior to the Old Testament, but the translation has considerable literary merit, and many charming touches in the authorised version belong to Coverdale. The first edition was soon absorbed, and, although it did not secure the royal license, was not formally suppressed. Convocation passed an apparent slight upon the version in June 1536 by praying the king for a new translation. The quarto and folio editions were issued by Nicolson in 1537, 'newly ouersene and corrected,' and for the first time 'set forth with the kynges moost gracious licence.' In the following year the same printer produced two editions of a Latin and English New Testament, in order that readers might be able to compare the Vulgate and English versions. The latter, which is by Coverdale, differs from his former translation, and follows the Latin text. The first of these two editions is a handsome well-printed volume, but so full of blunders that when Coverdale received it in July 1538, while superintending the printing of the 'Great Bible' at Paris, he put into the press in that city a more accurate edition, which was finished in November. Nicolson produced another edition in spite of Coverdale's remonstrances, and placed the name of John Hollybush on the title-page. It differs from the first issue, but is also very incorrect. In 1537 John Rogers brought out a Bible under the name of Thomas Matthew. It was based largely upon Coverdale and was also printed abroad, probably at Paris.

Cromwell determined to proceed with a new Bible, and Coverdale and Grafton the printer went over to Paris about May 1538 to carry on the work in the press of Regnault. Francis I at the request of Henry granted a license (STRYPE, *Cranmer*, ii. 756). Writing on 23 June 1538, Coverdale and Grafton inform Cromwell that they are sending two copies of what was afterwards known from its size as the 'Great Bible' of 1539, and state that they 'folowe not only a standynge text of the Hebrue, with the interpretation of the Caldee and the Greke, but we set, also, in a pryvate table the dyversite of redings of all textes, with suche annotacions, in another table, as shall douteles delucidate and cleare the same' (*State Papers*, Henry VIII, 1830, i. 575–6). The text is really that of Rogers revised. Coverdale remained in Paris during the year, and other letters to Cromwell supply details connected with the progress of the 'Great Bible' (*ib.* 578, 588, 591). Before the printing was finished, however, an edict was issued (see *Cotton. MS.* Cleop. E. v. f. 326, in British Museum) forbidding the work. The Englishmen fled, many sheets were publicly burned, but presses, types, and workmen and some sheets were brought over to England. In the 'Athenæum,' 20 May 1871, are a couple of despatches which passed on the subject between the English and French governments. In April 1539 the volume was completed 'by Rychard Grafton and Edward Whitchurch, cum privilegio ad imprimendum solum,' and was presented to the king by Cromwell, who appears to have been at the entire cost of its production. Coverdale was also the editor of the second 'Great Bible,' or 'Cranmer's,' 1540 (issued six times in 1540–1), and its reprint of 1562 (FULKE, *Defence of Translations*, Parker Soc. 1843, pp. 68, 548).

Besides some publications which cannot be ascribed to him with certainty, and the 'Goostly Psalmes,' which possibly belong to a later period, Coverdale translated Luther's exposition on the twenty-second Psalm, and a sermon by Osiander, both printed by Nicolson in 1537. He returned from Paris early in 1539, and applied to Cromwell for a continuation of the royal license to Nicolson for bibles and testaments (*Remains*, 498). In February and March he was at Newbury helping to carry into effect the 'Injunctions set forth by the authority of the king against English books, sects, or sacramentaries, also with putting down the day of Thomas Becket' (*ib.* 498–502, and STRYPE, *Mem.* I. i. 530–2). On the execution in 1540 of Cromwell and of Barnes, Coverdale found it necessary to leave England. Shortly afterwards he married an excellent woman named Elizabeth Macheson. Her sister was the wife of Dr. Joannes Macchabæus MacAlpinus or McAlpine, who helped to translate the first Danish bible. Lorimer says the wife of McAlpine was an Englishwoman. This practical protest against the

doctrine of the celibacy of the priesthood identified him completely with the reforming party. He lived for a certain time at Tübingen, where he obtained the degree of D.D. (Godwin, *De Præsulibus Angliæ*, 1743, p. 417.) Later on he was a Lutheran pastor and schoolmaster at Bergzabern, in the duchy of Deux-Ponts, 'where by translating in his leisure hours . . . various religious works into our language . . . he is of very great service in promoting the scriptural benefit of those persons in the lower ranks of life who are anxious for the truth' (R. Hilles to Bullinger, 15 April 1545, in *Original Letters*, Parker Soc. 3rd ser. 1846, p. 247). He took the name of Michael Anglus during his exile. Letters from him during this time are printed in the 'Remains' (Parker Society, 1846). Coverdale's bibles and other works appear in the proclamation of 8 July 1546 among those forbidden to be imported, bought, sold, or kept (Wilkins, *Concilia*, iv. 1). He lived at Bergzabern in poor circumstances between 1543 and 1547. The 'Order of the Communion' (March 1548) came to Frankfort during the fair-time, and Coverdale translated it into German and Latin. The latter was sent to Calvin with a hope that he might cause it to be printed. This was not done (F. Procter, *History of the Book of Common Prayer*, 1855, p. 61).

He returned to England in March 1548, was well received at court through the influence of Cranmer, and was appointed chaplain to the king and almoner to Queen Catherine, whose funeral sermon he preached in September 1548 (MS. in Coll. of Arms, i. 15, f. 98). He wrote to Paul Fagius from Windsor Castle, 21 Oct. 1548 (*Remains*, p. 526). On 27 April 1549 some anabaptists were examined at St. Paul's, and one of them 'bare a fagot at Pauls crosse, Myles Couerdale preached ye rehearsall sermon there' (Stow, *Annales*, 1631, p. 596). In the same year Whitchurch printed the second volume of the 'Paraphrase' of Erasmus, with a dedication by Coverdale, who helped in the translation. He was one of the thirty-one persons to whom was issued in January 1550 a commission to proceed against anabaptists as well as those who did not administer the sacraments according to the Book of Common Prayer (Strype, *Mem.* II. i. 385). In 1550 there appeared a translation of Otto Wermueller's 'Spyrytuall and moost precious Pearle,' with a commendatory preface by the Protector Somerset, who alluded to the consolation he had received from the book, but without speaking either of author or translator. These are specially mentioned by H. Singleton, who reprinted the 'Pearle': 'I have thought it good to set it forth once againe, according to the true copy of that translation that I received at the hands of M. Doctour Milo Coverdale, at whose hand I received also the copies of three other workes of Otho Wermullerus. . . . The "Precious Pearle," which the author calleth of "Affliction," another of "Death," the third of "Justification," and the fourth of "The Hope of the Faithful." These I have imprinted.' The original editions seem to have been printed abroad. On 20 July 1550 he had a gift of 40*l.* from the king (Wood, *Athenæ*, Bliss, ii. 762), and on 24 Nov. he preached Sir James Welford's funeral sermon at Little Bartholomew's in London.

When Lord Russell was sent down against the western rebels in 1551, Coverdale accompanied him to assist the secular arm with his preaching, and subsequently delivered a thanksgiving sermon after the victory. On 7 March 1551 he preached at Westminster Abbey on the occasion of the funeral of Lord Wentworth (Machyn, *Diary*, pp. 3-4), and went with Peter Martyr and others on 19 May of the same year to visit Magdalen College, Oxford (Cooper, *Athenæ*, i. 556). His behaviour in Devonshire gave satisfaction. He acted as coadjutor to John Voysey, bishop of Exeter, who resigned his see in his 103rd year, and Coverdale was appointed to the bishopric by the king's letters patent on 14 Aug. 1551. He was consecrated at Croydon on the 30th of the same month, and enthroned 11 Sept. (Le Neve, *Fasti Eccles. Angl.* 1854, i. 377-8). Cranmer specially interested himself in this appointment. Coverdale pleaded poverty as an excuse for not paying first-fruits (Strype, *Cheke*, p. 125, and *Cranmer*, i. 382). The revenues of the see had been much reduced by Voysey. Coverdale was one of the eight bishops and twenty-four other persons who were appointed in the same year to reform the ecclesiastical laws (*Cranmer*, i. 388). From Vowell we obtain our information about Coverdale's episcopal life. He 'most worthilie did performe the office committed unto him, he preached continuallie upon euerie holie daie, and did read most commonlie twise in the weeke, in some church or other within this citie.' He was hospitable, liberal, sober, and modest. 'His wife a most sober, chast, and godlie matron.' To Dr. Robert Weston, afterwards lord chancellor of Ireland, 'he committed his consistorie and the whole charge of his ecclesiasticall iurisdiction' (*Catalog of the Bishops of Excester*, 1584). On his accession to the episcopal bench he was very constant in attendance at the House of Lords during the parliaments of 1552 and 1553. After the

death of Edward VI, Coverdale was deprived, 28 Sept. 1553, and John Voysey reinstated (Le Neve, i. 378). He was required to find sureties (Foxe, iii. 149), and when the protestant prisoners drew up a declaration about a proposed disputation between them and some Roman catholic champions, Coverdale signed in order to signify his consent and agreement. Christian III of Denmark, at the instance of Dr. J. Macchabæus MacAlpinus, Coverdale's brother-in-law, wrote a letter, dated 25 April 1554, to Queen Mary on Coverdale's behalf. In her reply the queen stated that he was only charged with a debt due to her treasury (*ib.* iii. 149-51), but a second appeal from Christian (24 Sept.) brought permission for him to leave England for 'Denmarke with two of his servants, his bagges, and baggage without any theire unlawfull lette or serche' (extracts from *Privy Council Register* in *Archæologia*, xviii. 181). One of the two servants is supposed to have been his wife. He was cordially received by Macchabæus, and the king offered him a benefice which was not accepted. His books were included in the proclamation of 13 June 1555 (Wilkins, *Concilia*, iv. 128). He went to Wesel in Westphalia, where there were many English refugees, and 'preached there no longe time, till he was sent for by Woulgange, duke of Bypont, to take the pastoral charge' of Bergzabern once more (*Discourse of the Troubles at Franckford* (1575), 1846, p. 184). It has been stated that he assisted in the preparation of the Genevan version. He was in that city in December 1558, when he signed the letter to those of Frankfort in congratulation at the accession of Queen Elizabeth, and praying that all private dissensions might henceforth be laid aside (*ib.* p. 188).

The first edition of the Genevan Bible came out in 1560, but Coverdale had returned to England before that date, as he preached at Paul's Cross on 12 Nov. 1559 (Machyn, *Diary*, p. 218), as well as on 28 April 1560, before the lord mayor, the aldermen, and a large congregation at the same place. In spite of his deprivation in the previous reign he assisted, with other bishops, at the famous consecration of Archbishop Parker on 17 Dec. 1559 (*Account*, ed. J. Goodwin, Camb. Antiq. Soc. 1841). Coverdale, although he himself was consecrated in surplice and cope (Strype, *Cranmer*, i. 389), on this occasion appeared in a plain black gown. It is possible that it was owing to his scruples about vestments that he did not take the bishopric of Exeter again on the deprivation of Turberville in 1559. In 1563 he obtained the degree of D.D. from the university of Cambridge, and in the same year he got over an attack of the plague. On 3 March he was collated to the living of St. Magnus, close to London Bridge (Newcourt, *Repertorium*, i. 398), by Grindal, who petitioned the queen to release Coverdale from the payment of first-fruits, which came to more than 60*l.* The request was ultimately granted (Strype, *Parker*, i. 295–6). Grindal had a very high opinion of his piety and learning, and offered him other preferments, and endeavoured to obtain his appointment as bishop of Llandaff. His objections to vestments and other failings in uniformity were connived at (*ib.* 296; *Life of Grindal*, p. 171). On 10 April 1564 he was given power by the vice-chancellor of Cambridge University to admit Grindal as D.D. (*Grindal*, pp. 139–40), and in the same year he published his last book, the 'Letters of Saintes and Martyrs.' In 1566 the government determined to enforce a stricter observance of the liturgy, and Coverdale resigned his living. Many of those who attended the churches of other deprived London ministers 'ran after Father Coverdale, who took that occasion to preach the more constantly, but yet with much fear; so that he would not be known where he preached, though many came to his house to ask where he would preach the next Lord's day' (Strype, *Parker*, i. 480). He preached on eleven occasions at the church of the Holy Trinity in the Minories between 1 Nov. 1567 and 18 Jan. following (*Notes and Queries*, 1st ser. xii. 443). There is a considerable difference of opinion among the biographers as to the date of his death; but the register of burials of St. Bartholomew's places the burial on 19 Feb. 1568 (*ib.* 1st ser. i. 379). He was eighty-one years old when he died, and 'was a celebrated preacher, admired and followed by all the puritans; but the Act of Uniformity brought down his reverend hairs with sorrow to the grave. He was buried in St. Bartholomew's behind the Exchange, and was attended to his grave with vast crowds of people' (Neal, *History of the Puritans*, 1822, i. 153). In 1568–9 the ballad-printer, John Allde [q. v.], had license to print 'An Epytaphe of the Lyf and Death of Master Coverdayle' (Arber, *Transcript*, i. 384). No copy of this ballad is known. His epitaph was copied by Fuller from the brass inscription on his marble tombstone (destroyed in the great fire of London) under the communion-table in the chancel (*Church History*, 1655, bk. viii. pp. 64–65). The church was pulled down in 1840 to make way for the new Exchange; but what were thought to have been the remains of Coverdale were carefully reburied on 4 Oct. in a vault in the south aisle of the church of St. Magnus (N. Whittock, *Exhumation of the Remains of M. Coverdale*, 1840), where the

parishioners had in 1837 erected a monument to his memory (*Gent. Mag.* new ser. viii. 490).

A portrait of Coverdale, engraved by T. Trotter 'from a drawing in the possession of Dr. Gifford,' is in Middleton's 'Biographia Evangelica,' vol. ii. An engraving apparently from the same portrait is prefixed to the 'Letters of the Martyrs' (1837), and redrawn and engraved by J. Brain for Bagster & Sons, who added it to the 'Memorials' and their reprint of the 1535 Bible; also in Mrs. Dent's Annals,' 1877. The authenticity is doubtful.

The tercentenary of the first complete English Bible was observed on 4 Oct. 1835. Many sermons and addresses were delivered on the occasion, and medals in honour of Coverdale were struck. Coverdale had a grant of coat-armour in the reign of Edward VI: party per fess indented, gules and or, in chief a seeded rose between two fleurs-de-lis and in base a fleur-de-lis between two seeded roses, all countercharged.

The name of Coverdale will always be revered as that of the man who first made a complete translation of the Bible into English, but he was not a figure of marked historical interest. He was somewhat weak and timorous, and all through his life leaned on a more powerful nature. Barnes, Cromwell, Cranmer, and Grindal were successively his patrons. In the hour of trouble he was content to remain in obscurity, and left the crown of martyrdom to be earned by men of tougher fibre. But he was pious, conscientious, laborious, generous, and a thoroughly honest and good man. He knew German and Latin well, some Greek and Hebrew, and a little French. He did little original literary work. As a translator he was faithful and harmonious. He was fairly read in theology, and became more inclined to puritan ideas as his life wore on. All accounts agree in his remarkable popularity as a preacher. He was a leading figure during the progress of the reformed opinions, and had a considerable share in the introduction of German spiritual culture to English readers in the second quarter of the sixteenth century.

The following are the titles of the editions of Coverdale's Bible and Testament: (*a*) 'Biblia. The Bible, that is the Holy Scripture of the Olde and New Testament, faithfully and truly translated out of Douche and Latyn into Englishe, MDXXXV.' sine nota, folio (title printed in the same type as the Bible, and on the reverse 'The bokes of the hole Byble'). (*b*) 'Biblia. The Byble: that is the Holy Scrypture of the Olde and New Testament, faythfully translated into Englyshe, M.D.XXXV.' sine nota, folio (title and preliminary matter printed in English black letter, text the same as (*a*). In 'Notes and Queries,' 6th ser. vi. 481–2, the Rev. J. T. Fowler describes an edition, now in the Cambridge University library, with a prayer by Bishop Shaxton on the back of the title and other variations from the collation given by Fry). (*c*) 'Biblia. The Byble: that is the Holy Scrypture of the Olde and New Testament, faythfully translated into Englyshe, M.D.XXXVI.' sine nota, folio (title and preliminary matter printed in English black letter, text the same as (*a*) and (*b*)). (*d*) 'Biblia. The Byble, that is the Holy Scrypture of the Olde and New Testament, faythfully translated in Englysh, and newly ouersene and corrected, M.D.XXXVII.' Southwarke, J. Nycolson, 1537, folio and 4to (it is doubtful whether the folio or quarto was the first issued in 1537, probably the folio. The original woodcuts and map are reproduced, but the type is the ordinary English black letter). (*e*) 'The whole Byble, that is the Holy Scripture of the Olde and Newe Testament, faythfully translated into Englyshe by Myles Couerdale, and newly ouersene and correcte, M.D.L.' London, A. Hester [printed at Zurich by Christopher Froschouer], 1550, 4to (the second continental edition of Coverdale's Bible, in a German type similar, but smaller, to that of 1535. The title and preliminary leaves were printed in England in ordinary black letter. The original Zurich title had 'by Mastr. Thomas Mathewe.' The edition was republished in 1553 by Richard Jugge, with a new title-page, almanac, &c.) The New Testament from the Bible of 1535 was reprinted by Matthew Crom at Antwerp, with Tyndale's prologues, 1538 and 1539, 12mo, and by Grafton and Whitchurch, 1539, 8vo. Lea Wilson (*Bibles, Testaments*, &c., p. 143) describes a 12mo copy of the New Testament, which he dates circa 1535. Fry had two small New Testaments printed by Nicolson. The Book of Joshua from Coverdale's translation was issued about 1539 in 12mo, possibly by Gibson. The 1535 Bible was reprinted by Messrs. Bagster in 1847, 4to. (*a*) 'The Newe Testament both Latine and Englyshe, ech correspondent to the other after the vulgare texte, communely called S. Jeroms. Faythfully translated by Myles Couerdale, Southwarke, J. Nicolson, 1538, 4to (the first edition of Coverdale's Latin-English Testament printed while he was in Paris. It is well executed but full of errors, and Coverdale had a more accurate edition (*β*) printed at Paris). (*β*) 'The New Testament, both in Latin and English, after the vulgare texte, which is red in the Churche. Translated and corrected by Myles Couerdale,' Paris, F. Regnault for R. Grafton and E. Whitchurch, 1538, 8vo. (*γ*) 'The Newe Testament, both

in Latine and Englyshe, eche correspondente to the other after the vulgare texte, communely called S. Jeromes. Faythfullye translated by Johan Hollybushe,' Southwarke, J. Nicolson, 1538, 4to. (This edition is also very inaccurate, although it differs considerably from (*a*) both in the English and Latin.)

Coverdale's other writings are: 1. 'A Worke entytled of ye Olde God and the Newe, of the Olde Faythe and the Newe, of the Olde Doctryne and ye Newe, or originall Begynnynge of Idolatrye,' London, J. Byddell, 1534, 12mo (anonymous; translated through the Latin of H. Dulichius from 'Vom alten und newen Gott,' 1523; among the books prohibited in 1539 (really 1546, see No. 10), according to the first edition of Foxe (1562–1563, p. 574), also prohibited in convocation 1558, see WILKINS, *Concilia*, iv. 163). 2. 'A Paraphrase upon all the Psalmes of Dauid, made by Joannes Campensis, reader of the Hebrue lecture, in the universite of Louane, and translated out of Latyne into Englyshe,' London, n. d., 16mo (in Cotton's 'Editions of the Bible,' 1852, p. 135, two undated editions, one printed by T. Gibson, are mentioned as appearing in 1534 and one in 1535. The translation, which is attributed to Coverdale by Bale, is from the Latin text printed by Regnault at Paris in 1534). 3. 'The Concordance of the New Testament, most necessary to be had in ye handes of all soche as the communycacion of any place contayned in ye New Testament, anno 1535,' T. Gibson, small 8vo (attributed to Coverdale by Bale). 4. 'A faithful and true Prognostication upon the Year 1536, translated out of High German,' 1536 (among the prohibited books mentioned by Foxe, 1st edition, p. 573; the 'Prognostication' also printed by Kele for 1548 and 1549; authorship doubtful). 5. 'A very excellent and swete Exposition upon the two and twentye Psalme of David, called in Latyn, Dominus regit me et nihil. Translated out of hye Almayne into Englyshe by Myles Coverdale, 1537' [col.] 'Imprinted in Southwarke, by James Nycolson for John Gough,' 16mo (translated from Luther; this is the 23rd Psalm, according to the notation of the Hebrew text). 6. 'How and whither a Christen man ought to flye the horrible plage of the pestilence. A sermon by A. Osiander. Translated out of hye Almayn into Englishe,' Southwarke, J. Nicolson, 1537, small 8vo; and London, L. Askell, n. d., small 8vo (anonymous; at the end is 'A Comforte concernynge them that be dead'). 7. 'The Original and Sprynge of all Sectes and Orders by whome whan or were they beganne. Translated out of hye Dutch in Englysh,' J. Nicolson for J. Gough, 1537, 8vo, two editions (see FOXE, 1st edition, p. 574). 8. 'The Causes why the Germanes wyll not go nor consente unto the councell which Paul 3 hath called to be kept at Mantua,' Southwarke, J. Nicolson, 1537, 8vo (ascribed to Coverdale by Bale). 9. 'An Exposicion upon the Songe of the Blessed Virgine Mary, called Magnificat. Translated out of Latine into Englyshe by J. Hollybush,' Southwarke, J. Nicolson, 1538, 8vo (see FOXE, 1st edition, p. 574; it will be remembered that Nicolson placed the name of Hollybush upon the title of the Latin-English Testament of 1538—see above). 10. 'Goostly Psalmes and Spirituall Songes drawen out of the Holy Scripture for the comforte and consolacyon of such as loue to reioyse in God and his Worde' [col.] 'Imprynted by me Johan Gough,' n. d., 4to. The only copy known is in the library of Queen's College, Oxford. Bale mentions that Coverdale translated the 'Cantiones Vuitenbergensium' (i.e. the 'Walther'sches Gesangbuch,' first published at Wittenberg, 1524), but Professor A. F. Mitchell first pointed out (*The Wedderburns and their Work*, 1867, small 4to) that the 'Goostly Psalmes' were translated from the German hymn-books. In the 'Academy' of 31 May 1884 Mr. C. H. Herford gave the result of his independent investigations, and Professor Mitchell contributed a letter 28 June 1884. A table of Coverdale's hymns and their correspondences with the Kirchenlied is in Herford's 'Studies in the Literary Relations of England and Germany in the 16th century,' 1886, 8vo (pp. 17–20; see also pp. 8–16, 399–402). The Rev. J. Mearns will also supply a table, giving the first lines of the English and of the German hymns, in his article on the 'Goostly Psalmes' in the forthcoming 'Dictionary of Hymnology' (*Academy*, 21 June 1884). Coverdale introduced some metrical novelties, and the 'Goostly Songs' hold an interesting position in English hymnology. They are selected from originals published between 1524 and 1531. Professor Mitchell thinks they contain an imitation of a hymn which first appeared as late as 1540, but Mr. Herford does not take this view. Among the books attributed to Coverdale in the catalogue of books forbidden at the end of the injunctions issued by Henry VIII in 1539 (see FOXE, 1st edition, p. 573) appears 'Psalmes and Songes drawn, as is pretended, out of Holy Scripture.' But the catalogue of forbidden books is omitted in subsequent editions of Foxe, and Townsend (see his edition, v. 565–6, and app. xviii) points out that it was not issued until 1546. 11. 'Fruitfull Lessons upon the Passion, Buriall, Resurrection, Ascension, and the Sending of the Holy Ghost, gathered

out of the foure Evangelists; with a plaine Exposition of the same by Miles Coverdale' (adapted from H. Zwingli's 'Brevis commemoratio mortis Christi;' Tanner says an edition was printed at Marpurg between 1540 and 1547, 8vo; also London, T. Scarlet, 1593, 4to). 12. 'The Old Faith, an evident probacion out of the Holy Scripture, that the Christen fayth (which is the right, true, old, and undoubted fayth) hath endured sens the beginnyng of the worlde. Herein hast thou also a shorte summe of the whole Byble, and a Probacion that al vertuous men haue pleased God and were saved through the Christen fayth, 1541, by Myles Coverdale,' 1541, 1547, 16mo (translated from Bullinger's 'Antiquissima Fides et vera Religio;' reprinted in 1624, 4to, as 'Looke from Adam and behold the Protestant's Faith and Religion evidently proved out of Holy Scriptures.' 13. 'A Confutation of that Treatise which one John Standish made agaynst the protestacion of D. Barnes in the yeare 1540, wherein the Holy Scriptures (perverted and wrested in his sayd treatise) are restored to their owne true understanding agayne by Myles Coverdale'[Marpurg, 1541? and 1547?], small 8vo. 14. 'The Christen state of Matrimonye, the orygenall of Holy Wedlok, what it is, how it ought to proceade, contrary wyse, how shamefull a thinge whordome and aduotry is, and how maried folkes shulde bring up their children in the feare of God. Translated by M. Coverdale,' 1541, small 8vo, 1543, with preface by T. Becon, 1547 (?), 1552, and 1575, J. Awdeley, 16mo, with four additional chapters, but without Becon's preface (translated from the Latin of H. Bullinger). 15. 'The Christian Rule or State of the World, from the hyghest to the lowest: and how everie Man should lyue to please God in his callynge,' 1541, 1552, 16mo (ascribed to Coverdale by Tanner). 16. 'The Actes of the Disputacion in the Councell of the Empyre holden at Regenspurg [1541]: That is to saye, all the Artycles concernyng the Christen Relygion, set forthe by M. Bucere and P. Melangton. Translated by M. Coverdale, 1542,' small 8vo. 17. 'A Christen Exhortacion unto Customable Swearers what a ryght and lawfull Othe is: whan, and before whom, it ought to be. Item, the Maner of Sayinge Grace, &c. [in verse],' 1543 (?), 1545 (?), 1547 (?), 1552, and 1575, 16mo. 18. 'A shorte Recapitulacion or Abrigement of Erasmus Enchiridion, brefely comprehendinge the summe and contentes thereof. Drawne out by M. Coverdale, anno 1545,' Ausborch, 1545, 16mo (an abridgment of the 'Enchiridion Militis Christiani'). 19. 'The Defence of a certayne poore Christen Man, who else shuld haue bene condemned by the Popes lawe' [col.] 'Printed at Nurenbergh and translated out of Douche into Englishe by Myles Couerdale in 1545 in the laste of October,' 16mo. 20. 'The second tome or volume of the Paraphrase of Erasmus upon the Newe Testament,' London, E. Whitchurche, 1549, folio (dedication to the king on behalf of 'the translatours and printer of this right fruteful volume,' signed 'M. Couerdall,' who translated the Epistles to the Romans, Corinthians, and Galatians; the remainder is by Olde, Coxe, and others, see STRYPE, *Eccles. Mem.* ii. pt. i. 45–8). 21. 'A Spyrytuall and moost Precious Pearle, teachyng all Men to Loue and Imbrace ye Crosse . . . set forth by the Duke of Somerset,' 1550, small 8vo; also 1555 (?), 1561 (?), 1593, in Welsh, 1595, 1812, 1838, 1870, 1871. (Translated from the German of Otto Wermueller, but no mention is made of him or Coverdale in the first edition, issued under the patronage of the Protector Somerset, who added a preface. Singleton's reprint (1561?) mentions the authorship.) 22. 'A most Frutefull, Pithye, and Learned Treatise how a Christen Man oughte to Behaue Hymselfe in the Daunger of Death,' &c., n. d., 16mo, printed abroad about 1555; also by Singleton, 1561, 1579 (the second of the four treatises of Otto Wermueller translated by Coverdale; contains the first publication of Lady Jane Grey's Exhortation, written the night before her execution). 23. 'A Godly Treatise, wherein is proued the true Iustification of a Christian Man, to come freely of the Mercie of God, &c., with a Dialogue of the Faithfull and Unfaithfull, translated out of High Almaine by M. Coverdale,' n. d., 16mo, printed abroad about 1555; also by Singleton, 1579 (the third treatise translated from O. Wermueller). 24. 'The Hope of the Faythfull, declaryng brefely and clearely the Resurrection of our Lord Jesus Christ past, and of our true Essential Bodies to come,' &c., n. d., about 1555, 16mo, printed abroad; also by Singleton, 1579 (the fourth treatise translated from O. Wermueller, see STRYPE, *Eccles. Mem.* iii. pt. i. 240). 25. 'An Exhortation to the Carienge of Chryste's Crosse, with a true and brefe confutation of false and Papisticall doctryne,' n.d., 16mo (anonymous, see STRYPE, *ib.* iii. pt. i. 239–40; printed about 1555, and part of a volume containing No. 24). 26. 'A Faythful and most Godly Treatyse concernynge the most sacred Sacrament of the Blessed Body and Bloud of our Sauiour Christ, compiled by John Calvine . . . and translated into Lattin by Lacius . . . and now last of al translated into Englishe by a faythful brother. . . . Therunto is added the order that the Church

and Congregacyon of Christ in Denmarke doth use,' n. d., 16mo; again by John Day, n. d., with epistle to the reader enlarged (Calvin's 'De la Cène du Seigneur' was first published in 1540, and translated into Latin by Nic. des Gallars in 1545; in the preface Coverdale states that the book was not translated from the French 'bycause it hath pleased the lorde to geve me more knowledge in the Latyne tonge'). 27. 'The Supplicacion that the Nobles and Comons of Osteryke made lately by their Messaungers unto Kyng Ferdinandus in the Cause of the Christen Religion. Item, the Kynge's answere to the same. Whereupon folow eth the wordes that the messaungers spake again unto the Kyng againe at their departing,' n. d., 16mo (in Coverdale's preface he speaks of having received a copy of the original in German in the previous March). 28. 'Certain most Godly, Fruitfull, and Comfortable Letters of such True Saintes and Holy Martyrs of God, as in the late bloodye persecution here within this Realme, gaue their lyves for the defence of Christes Holy Gospel,' London, J. Day, 1564, 4to (nothing is said as to how these letters were obtained; in the preface Coverdale speaks of desiring to publish some more; reprinted in modernised language, with introduction by Rev. Edward Bickersteth, 1837, 8vo).

Many of Coverdale's works, and nearly all his letters, have been edited for the Parker Society by the Rev. George Pearson, in 2 vols.: 'Writings and Translations, containing the Old Faith, a Spiritual and most Precious Pearl, Fruitful Lessons, a Treatise on the Lord's Supper, Order of the Church in Denmark, Abridgement of the Enchiridion of Erasmus,' Cambridge, 1844, 8vo; and 'Remains, containing Prologues to the translation of the Bible, Treatise on Death, Hope of the Faithful, Exhortation to the Carrying of Christ's Cross, Exposition upon the Twenty-second Psalm, Confutation of the Treatise of John Standish, Defence of a certain poor Christian Man, Letters, Ghostly Psalms, and Spiritual Songs,' Cambridge, 1846, 8vo.

'A Christian Catechism' is attributed to Coverdale by Bale, and 'A Spiritual Almanacke' by Tanner, the latter possibly printed with the 'Prognostication' (see No. 4). Foxe speaks of having possessed a manuscript 'Confutation of a Sermon of Dr. Weston's at Paul's Cross, 20 Oct. 1553,' and a translation of the Canon of the Mass, from the Salisbury Missal, which Foxe reproduces (*Acts and Mon.* iii. 11). The reprint of 'Wicklieffe's Wicket, faythfully overseene and corrected,' n. d., is sometimes attributed to Coverdale.

[The most extensive life is Memorials of Myles Coverdale, with Divers Matters relating to the Promulgation of the Bible in the Reign of Henry VIII, 1838, 8vo. It contains a bibliography. Shorter biographies are in the Parker Society editions of Coverdale's pieces mentioned above; Bagster's reprint of the 1535 Bible, 1847, 4to; Cooper's Athenæ Cantab. vol. i.; Kitto's Cyclopædia, 3rd ed. 1862, vol. i.; Middleton's Biographia Evangelica, ii. 101; Fuller's Worthies, 1811; Godwin, De Præsul. Angliæ, 1743; Biog. Brit. (Kippis), 1789, vol. iv. Bale, Foxe, Strype, and Tanner are the only authorities for many particulars. Besides the works referred to in the text, see also General Index to Strype, 1828; H. Gough's General Index to Parker Society, 1855; J. H. Wiffen's House of Russell, 1833, i. 354–5, 361–6; Maitland's Essays on the Reformation, 1849; Rymer's Fœdera, 1727, xv. 281–9, 340; Polwhele's Devonshire, 1797, i. 289; Churton's Life of Nowell, 1809; Berkenhout's Biographia Literaria, 1777, p. 132; J. L. Chester's John Rogers, 1861; Hook's Lives of the Archbishops, vii. 139, ix. 240, 245; Notes and Queries, 1st ser. i. 379, vi. 552, 615, vii. 97, xii. 443, 2nd ser. vi. 433, 3rd ser. vi. 150. Dr. Ginsburg has kindly supplied some information, besides allowing the writer to see his two unique leaves of the German Bible of 1529–30. For Coverdale's Bible and New Testament, see J. Lewis's History of the English Translations of the Bible, 1818; J. W. Whittaker's Enquiry into the Interpretation of the Scriptures, 1819–20; H. Walter's Letter to the Bishop of Peterborough, 1823; Bibles, Testaments, &c., in the Collection of Lea Wilson, 1845; Anderson's Annals of the English Bible, 1845; Cotton's Editions of the Bible in English, 2nd ed. 1852; F. COWARD, JAMES (1824–1880), organist, born in London 25 Jan. 1824, was admitted at an early age into the Westminster Abbey choir. Both in the abbey and in concerts solos were frequently entrusted to him,

and on more than one occasion he had the honour of singing with Madame Malibran. His first appointment as organist was to the parish church of Lambeth, and on the opening of the Crystal Palace at Sydenham he was given the post of organist there. This situation he filled with credit to himself and advantage to the institution until his death, which took place at his house in Lupus Street, Pimlico, 22 Jan. 1880. For some time before his death he had been conductor of the Abbey and City glee clubs. In October 1864 he succeeded Turle as conductor of the Western Madrigal Society, an office which he retained until March 1872. Besides these various appointments he held the post of organist to St. George's Church, Bloomsbury (1866-9), the Sacred Harmonic Society, and the grand lodge of freemasons. His last church appointment was to St. Magnus the Martyr, London Bridge, which he held till his death. His compositions are not numerous, but they show considerable refinement and musical knowledge, as well as an earnestness of aim for which he was scarcely given credit by those who were accustomed to hear his operatic selections or transcriptions for the organ. Considering the musical taste of the time, it is not to be wondered at that these performances formed part of his ordinary duties at the Crystal Palace, but it is to be regretted that so great a power of improvisation as he possessed should so often have been turned to account to provide musical accompaniment for acrobatic displays. The most important of his published works are: 'O Lord, correct me,' anthem; 'Sing unto God,' a canon (4 in 2); 'Ten Glees and a Madrigal' (published 1857), 'Take thy Banner,' 'Airy Fairy Lilian' (five-part song), 'I strike the Lyre,' part-songs; 'The Skylark,' prize glee; marches, &c., for the organ, and several pianoforte pieces.

[Musical Standard, 14 Feb. 1880; Mr. T. L. Southgate's Letter to Norwood News, February 1880; information from C. T. Budd, esq.]

J. A. F. M.

COWARD, WILLIAM (1657?-1725), physician, was born at Winchester in 1656 or 1657. His mother was sister of Dr. John Lamphire, principal of Hart Hall, Oxford, and Camden professor of history, whose property he apparently inherited (Hearne, *Collections*, i. 248). In May 1674 Coward was admitted as a commoner of Hart Hall; and in 1675 a scholar of Wadham College. He proceeded B.A. in 1677, and in January 1679-1680 was elected fellow of Merton. In 1682 he published a Latin version of Dryden's 'Absalom and Achitophel' (1681) which was eclipsed by a contemporary version published by Atterbury. Coward was ridiculed, and, according to Wood, procured the insertion of a notice in 'Thompson's Intelligence,' attributing it to 'Walter Curle of Hartford.' In 1683 Coward became M.A., in 1685 M.B., and in 1687 M.D. He practised in Northampton; and in 1693 or 1694 settled in Lombard Street, London, having to leave Northampton in consequence of some immorality, according to Hearne (*ib.* i. 304).

In 1702 Coward published, under the pseudonym 'Estibius Psychalethes,' 'Second Thoughts concerning Human Soul, demonstrating the notion of human soul as believed to be a spiritual, immortal substance united to a human body to be a plain heathenish invention . . . the ground of many absurd and superstitious opinions, abominable to the reformed churches and derogatory in general to true christianity.' His argument was possibly suggested by Locke's famous speculation as to the possibility that a power of thinking might be 'superadded' to matter. He maintains, partly upon scriptural arguments, that there is no such thing as a separate soul, but that immortal life will be conferred upon the whole man at the resurrection. Replies were made in Nichols's 'Conference with a Theist,' John Turner's 'Vindication of the Separate Existence of the Soul,' and John Broughton's 'Psychologia.' Locke, in letters to Collins, speaks contemptuously both of the 'Psychologia' and of Coward's next work, 'The Grand Essay; or a Vindication of Reason and Religion against Impostures of Philosophy,' to which was appended an 'Epistolary reply' to the 'Psychologia.' Upon the publication of this, complaint was made in the House of Commons, 10 March 1703-4. A committee was appointed to examine Coward's books. Coward was called to the bar and professed his readiness to recant anything contrary to religion or morality. The house voted that the books contained offensive doctrines, and ordered them to be burnt by the common hangman. The proceeding increased the notoriety of Coward's books; and in the same year he published another edition of the 'Second Thoughts.' In 1706 (apparently) appeared 'The Just Scrutiny; or a serious enquiry into the modern notions of the soul.'

Henry Dodwell's 'Epistolary Discourse,' &c. in support of the natural mortality of the soul, appeared in 1706, and led to a controversy with Samuel Clarke and Anthony Collins. Coward distinguishes his own position from Dodwell's and attacks Clarke. In 1706 Coward also published his 'Ophthalmoiatria,' chiefly medical, in which he ridi-

cules the Cartesian notion of an immaterial soul residing in the pineal gland. From a letter (published in the 'Gentleman's Magazine,' 1787, p. 100) it appears that Sir Hans Sloane corrected the proofs, and that in spite of Sloane's remonstrances Coward declined to conceal his opinions. Swift and other contemporaries frequently ridicule Coward in company with Toland, Collins, and other deists.

Coward published two poetical works, 'The Lives of Abraham, Isaac, and Jacob, an heroic poem' (1705), which seems to have disappeared; and 'Licentia Poetica discussed . . . to which are added critical observations on . . . Homer, Horace, Virgil, Milton, Cowley, Dryden, &c. . . . ' (1709). Commendatory verses by Aaron Hill and John Gay are prefixed. It is a didactic performance in the taste of the day, with an apparatus of preface, notes, and political appendix. Coward left London about 1706, and in 1718 was residing at Ipswich, whence in 1722 he wrote to Sir Hans Sloane, offering to submit an epitaph upon the Duke of Marlborough to the duchess, who was said to have offered 500*l.* for such a performance. He was admitted a candidate of the College of Surgeons on 5 July 1695, and remained in that position till 1725, when the absence of his name from the lists proves that he must have been dead.

His medical works are: 1. 'De Fermento volatili nutritivo conjectura rationis,' &c. (1695). 2. 'Alcali Vindicatum' (1698). 3. 'Remediorum Medicinalium Tabula' (1704). 4. 'Ophthalmoiatria,' &c. (1706).

[Wood's Athenæ Oxon. (Bliss), iv. 480; Biog. Brit.; An Historical View of the Controversy concerning an Intermediate State, pp. 174–82 (2nd ed. 1772); Munk's Coll. of Phys. i. 512; Gent. Mag. 1787, 100; Hearne's Collections (Oxford Hist. Soc. 1885), i. 248, 25, 3, 304.] L. S.

COWARD, WILLIAM (*d.* 1738), a London merchant, famous for his liberality to dissent, possessed large property, including lands and hereditaments in Jamaica. Little is known of his early life, but towards the close of his days his charitable gifts brought him into notice. At that time he lived in retirement at Walthamstow, a favourite retreat for wealthy London nonconformists, where he purchased a fine house, and spent much time and money in beautifying its gardens. His household arrangements were very strict, the doors being rigidly closed against visitors at eight o'clock in the evening, and mention of his eccentricities is frequently made by the ministers who partook of his hospitality. He established a meeting-house at Walthamstow, and selected Hugh Farmer as its first minister. A course of lectures 'On the most important Doctrines of the Gospel' was instituted by him in 1730 in the church of Paved Alley, Lime Street, where twenty-six in all, afterwards published in two volumes, were delivered. A second set was established by him at Little St. Helen's in 1726, and a third course at Bury Street, St. Mary-Axe, in 1733, the last set being printed in 1735. In the spring of 1734 he contemplated founding a college at Walthamstow for the education of children of dissenters for the ministry, and the post of professor of divinity was offered to Doddridge, but the scheme came to nothing, although Coward continued, while alive, to assist the poorer ministers and to aid in the teaching of their children. He died at Walthamstow on 28 April 1738, aged ninety, when his property was valued in the paper at 150,000*l.*, and the bulk was said to have been left in charity. His arbitrary character is described in a letter from the Rev. Hugh Farmer, printed in Doddridge's Correspondence, iii. 251–2, and another of the same divine's correspondents (*ib.* iii. 315) went so far as to say that the old man had 'a bee in his bonnet.' It was this fiery disposition that caused a fierce quarrel between Coward and the hot-headed divine, Thomas Bradbury [q. v.] Coward's will is dated 25 Nov. 1735, and full credit for the disposition of his property may fairly be assigned to the donor. With the exception of his wife, no relatives are mentioned as such; but the similarity of name and the largeness of the bequest would lead us to infer that Mr. William Coward of Saddlers' Hall in Cheapside, to whom was bequeathed the main portion of the 'lands and hereditaments whatsoever lying in the island of Jamaica,' and Mary Coward, daughter of this William Coward, to whom 500*l.* was left, were nearly connected with him. Considerable property was left in trust 'for the education and training up of young men . . . between 15 and 22, in order to qualify them for the ministry of the gospel among the protestant dissenters;' and the four trustees, of whom Dr. Watts and the Rev. Daniel Neal were the best known, were enjoined to take care that the students should be instructed according to 'the assembly's catechism, and in that method of church discipline which is practised by the congregational churches.' For many years two educational institutions, one in Wellclose Square, and the other, first at Northampton and then at Daventry, were almost entirely maintained from the income of the trusts; but in 1785 pecuniary necessities brought about the withdrawal of the grant

from the former academy, and the latter is now merged in New College, St. John's Wood. The best account of these training colleges is in the official 'Calendar of the Associated Colleges,' pp. 41–50. A three-quarter length portrait of Coward is preserved at New College; it was taken when he was about fifty years old, and was left to the Coward trustees by Dr. Newth, an old Coward College student, who had acquired it a few years previously from a collateral descendant of the subject. The trustees also possess a copy of a thin volume, eight pages in all, entitled 'Thalia triumphans. A congratulatory poem to the worthy William Coward on his happy marriage. By E. Settle, 1722.' From a line on page 7, the lady's maiden name is ascertained to be Collier, and the marriage can be identified with that of 'William Coward, of Staples Inn, Middx., Bachr., and Sarah Collier, of St. Bennet Grace Church, London, Spr.,' which was solemnised at St. Dionis Backchurch on 24 April 1722 (*Register printed by Harleian Soc.* 1878, p. 60). This was, no doubt, the William Coward of Sadlers' Hall, to whom the property in Jamaica was left.

[Wilson's Dissenting Churches, i. 212, 244, 253, 363, iii. 490; Stoughton's Doddridge, p. 228, &c.; Correspondence of Doddridge, iii. 146–8, 231–2; Gent. COWELL, JOHN (1554–1611), civilian, born in 1554 at Ernsborough, Devonshire, left Eton College in 1570 for King's College, Cambridge. Richard Bancroft, afterwards bishop of London, seems to have advised him to devote himself to civil law at Cambridge, and he soon distinguished himself in the study, proceeding LL.D. and becoming a member of the college of civilians at Doctors' Commons in 1584. He was proctor of his university in 1585; was incorporated D.C.L. of Oxford in 1600; became regius professor of civil law at Cambridge in 1594, and master of Trinity Hall in 1598. He was vice-chancellor of Cambridge University in 1603 and 1604, and in 1608 Bancroft, then archbishop of Canterbury, made him his vicar-general. In 1607 Cowell published at Cambridge 'The Interpreter, a booke containing the signification of Words: Wherein is set foorth the true meaning of all... such words and termes as are mentioned in the Lawe-writers or Statutes . . . requiring any Exposition.' It was dedicated to Bancroft, who had interested himself in its production. This book gave Cowell more than an academic reputation. Under the headings 'King,' 'Parliament,' 'Prerogative,' 'Recoveries,' and 'Subsidies,' he advanced the opinion that the English monarchy was an absolute monarchy, and that the king only consulted parliament by his 'goodness in waiving his absolute power to make laws without their consent' (s.v. 'Subsidy'). This doctrine offended the commons, and early in the session of 1610 the lower house invited the lords to join with them in directing the king's attention to the book. A conference was arranged by the attorney-general, Sir Francis Bacon, but before further proceedings were taken the Earl of Salisbury announced that James had voluntarily summoned Cowell before him and disavowed his doctrine, which highly incensed him. Cowell duly appeared before the council in the middle of March 1610. 'He was requested to answer some other passages of his book which do as well pinch upon the authority of the king, as the other points were derogatorie to the liberty of the subject. . . . He could not regularly deliver what grounds he hath for the maintaining of those his propositions' (Winwood). Cowell was therefore committed to the custody of an alderman; the book was suppressed by a proclamation, in which it was denounced as insulting alike to king and commons, and was burnt by the common hangman (26 March 1610). Fuller states that Coke, moved by professional jealousy of Cowell, whose knowledge of civil law was reputed to exceed his own knowledge of common law, was foremost in attacking the book, and habitually spoke of its author as 'Dr. Cowheel.' On 25 May 1611, Cowell resigned his professorship of civil law (Le Neve, *Fasti*, ed. Hardy, iii. 657), and he died 11 Oct. following, being buried in the chapel of Trinity Hall. He left bequests to Trinity Hall, King's College, and to Cambridge University.

The 'Interpreter' was reissued in 1637 (unchanged), 1672, 1684 (continued by Thomas Manley), 1701 (edited by White Kennet), 1709, and 1727. A copy of Kennet's edition (1701), with valuable manuscript notes by Bishop Tanner, is in the Bodleian. Cowell also wrote 'Institutiones Juris Anglicani ad methodum institutionum Justiniani compositæ et digestæ,' Cambridge, 1605 and 1630.

[Wood's Fasti Oxon. (Bliss), i. 289–90; Cat. Brit. Mus. Books before 1640; Fuller's Worthies; Harwood's Alumni Eton. 182–3; Weldon's Court of James I, 1650, p. 191: Biog. Brit. (Kippis); Winwood's Memorials, iii. passim; Hallam's Hist. i. 325–6; Gardiner's Hist. ii. 66–8; Parliamentary Journal, 1610; Notes and Queries, 3rd ser. i. 9, 74, 6th ser. xi. 117. The proclamation

printed by Robert Barker in 1610 suppressing the Interpreter appears in Manley's and in White Kennet's editions of the book, as well as in Rapin and Carte. It is not in the Parliamentary Journals.] S. L.

COWELL, JOSEPH LEATHLEY (1792–1863), actor, author, and painter, was born not far from Torquay in Devonshire on 7 Aug. 1792. His real surname was WITCHETT. He was of good lineage, his father having been a colonel in the army; his uncle was Admiral Whitshed, whose portrait is at Greenwich; his mother was indulgent to his every whim, and he had opportunities for mingling with seamen and of seeing Nelson and Earl St. Vincent. He has told how he first saw 'Hamlet' performed at Carey Sands, and how he interrupted the ghost by shouting 'That's the man who nailed up the flags,' and startled Hamlet when hesitating, 'whether 'tis nobler in the mind to suffer,' by suggesting, 'If I were you I'd go to sea!' He made up his mind that he would rather be an actor like the one who played Horatio 'than be Horatio Nelson, though he had lost an eye and banged the French.' He entered the navy when thirteen years old, served three years as a midshipman, and when turned sixteen got three weeks' leave of absence before starting on a twelve months' cruise to the West Indies. He had been educated strictly in the Roman catholic faith, but curiosity led him into a protestant church in London, and he fell in love with a Miss Anna Creek, made acquaintance with the family, and first saw good acting, Charles Kemble as Romeo, Miss Davenport as the Nurse, and Charles Murray as Friar Laurence. He was more than half 'engaged' before he rejoined his ship and went to the West Indies. In a quarrel with a superior officer he forgot himself, and struck his oppressor, thus rendering himself liable to a court-martial, with the probability of being shot. On the voyage home a French ship was met, and he begged to be allowed to lose his life honourably in action. He did his duty so bravely that on arriving at Plymouth the admiral obtained his ante-dated 'discharge by sick-list.' Hence the change of name from Hawkins-Witchett. He took to painting portraits, but on 11 Jan. 1812 he wrote to George Sandford of New York, at the Plymouth Theatre, a short letter telling of his wish to become an actor, content with a small salary, and gave his name as Leathley Irving. He was kindly received, taught his business, and made his first appearance as Belcour in Cumberland's 'West Indian' twelve days later, in the presence of Admiral Calder, old shipmates, and some relatives. Though nervous at first, he achieved a brilliant success. He obtained a regular engagement, soon acted along with Incledon, Munden, Mrs. Jordan, young Betty, and Charles Young. He received offers from the elder Macready for Newcastle, from Kelly for Portsmouth, but preferred to accept an engagement from Beverley at Richmond. He took all varieties of tragedy and comedy, laboured hard, but liked best low comedy. At Woolwich he commenced scene-painting, working also at Covent Garden with the elder Grieve, under Phillips. At Brighton he got his highest salary in England as actor and painter. Tempted by better business he joined Faulkner at a lower salary on the northern circuit. Before this time he had married his first wife, a Miss Murray, and they had two children, Joseph and Maria. Ambition had led him into a ruinous struggle with difficulties, but Lord Normanby and a few other friends generously presented him with fifty guineas before he started for Shields and York, 'the stepping-stone to London.' Here he appeared as Crack in the 'Turnpike Gate.' At Wakefield he left the company and joined Thomas Robertson's at Lincoln. Stephen Kemble offered him an engagement at Drury Lane at 6*l.* a week, and he opened as Samson Rawbold in Colman's 'Iron Chest' and Nicholas in the 'Midnight Hour.' He was jealous of Harley, thanks to whose epileptic attack he secured the part of Goodman. On the death of Queen Charlotte, 12 Nov. 1818, theatres were closed. Drury Lane ended the season in a state of bankruptcy, so he composed and acted a three hours' olio called 'Cowell Alone; or, a Trip to London,' on the Lincoln circuit. Thence he returned to London for the Sans Pariel (*sic*), otherwise the Adelphi. His daughter Maria died, aged five years. Engaged by Elliston at Drury Lane, he opened as James in 'Blue Devils,' but he soon returned to the Adelphi on a three years' engagement. While drawing from memory a portrait of Charles Kemble as Romeo for his friend Oxberry, he was brought to the notice of Stephen Price, the American manager, arranged with him to sail for the States, being engaged at 10*l.* a week the first season, 12*l.* the second. He was then acting at Astley's in 'Gil Blas,' and did not scruple to escape on the plea of indisposition. He left behind his sons, Joseph and Samuel, sailed from the Downs on 8 Sept. 1821, and arrived at New York 24 Oct., to begin at the Park Theatre in 'The Foundling of the Forest' and his ever-successful Crack. He took the audience by storm. From this date onward, until long after he published his clever and amusing autobiography in 1844, his career was prosperous, and he was a favourite in all the

chief cities of the Union. Clever as he was, a delightful companion, brimming with anecdote, mirth, and song, sarcastic but not revengeful, he was frequently in quarrels owing to quick temper. The second of his three wives was Frances Sheppard, by whom he was the father of Sidney Francis, known afterwards as Mrs. Bateman [q. v.] On 24 July 1823 he left the Park Theatre. Early in February 1826 he was receiving warmest welcome at Charleston. In September 1827 he opened the Philadelphia Theatre at Wilmington, Delaware. In 1829 his son Samuel [q. v.], nine years old, appeared for his benefit at Boston. His other son, Joseph, distinguished himself as a scene-painter, but died in early manhood. When in 1844 Messrs. Harper Brothers of New York published the record of Joe Cowell's 'Thirty Years of Theatrical Life,' he was still a favourite among all classes. But he became weary of his profession, and desired nothing so much as a return to England and a retired life near London, at Putney, 'up the Thames.' This was the calm evening that he looked forward to with hope, and it was fulfilled in 1863. He had previously returned in 1846 and 1854. No man ever was more unselfishly and affectionately proud of the genius of his descendants than he was of Kate Bateman's 'Leah.' He married a third time in London, 1848 (Harriet Burke, who survived until 1886). He loved to welcome the younger actors, and sometimes painted or sketched for amusement. His own portrait was a convincing proof of his rare talent. The old man lingered until 13 Nov. 1863, and lies buried in Brompton cemetery, near London. A stone was erected by his son-in-law, H. L. Bateman [q. v.]

[Personal knowledge; obituary notice in the Era, by Leigh Murray; Thirty Years passed among the Players in England and America, theatrical life of Joe Cowell, comedian, written by himself, 1844.] J. W. E.

COWELL, SAMUEL HOUGHTON (1820–1864), actor and comic singer, son of Joseph Leathley Cowell [q. v.] by his first wife (a sister of William Henry Murray of Edinburgh, and thus connected with the Siddons family), was born in London on 5 April 1820, taken by his father to America in 1822, and educated in a military academy at Mount Airey, near Philadelphia. He made great progress in his few years of steady education, but at nine years of age first appeared on the stage at Boston, U.S., in 1829 as Crack in T. Knight's 'Turnpike Gate,' for his father's benefit, singing with him the duet 'When off in curricle we go, Mind I'm a dashing buck, friend Joe.' From that time onward he earned his own living, was hailed as 'the young American Roscius,' and acted in all the chief theatres of the United States; some of his other characters being Chick, Matty Marvellous, Bombastes Furioso, and one of the Dromios, his father playing the other, and declaring that 'Sam is me at the small end of a telescope.' He went to England, and appeared at the Edinburgh Theatre Royal and the Adelphi, under the management of his uncle, W. H. Murray. He became an established favourite, not only as an actor, but as a comic singer between the acts. On 5 Nov. 1842 he married Emilie Marguerite Ebsworth, daughter of a highly esteemed dramatist and teacher of music. Nine children were the fruit of the union, of whom two daughters, Sydney and Florence, with one of the six sons, Joseph, afterwards adopted the stage professionally, and with success. After remaining four years in Edinburgh he went to London on an engagement for three years, with Benjamin Webster, at the Adelphi, but soon abandoned this, and made his first appearance on 15 July 1844 as Alessio in 'La Sonnambula' at the Surrey Theatre. Before 1848 he removed to the Olympic as stock comedian under Bolton's management; then for two years to the Princess's, under James Maddox, playing second to Compton; next to Covent Garden, under Alfred Bunn, taking Harley's class of business; and afterwards to Glasgow, under his old friend Edmund Glover, with other engagements at Belfast and Dublin. Everywhere a favourite, flattered and tempted towards conviviality, and naturally restless, he grew tired of dramatic study, always arduous in the provinces, where a frequent change of performances is necessary, and determined to devote himself to character singing. His 'Billy Barlow,' 'Lord Lovel,' 'Yaller Busha Belle,' 'Corn Cobs,' 'Molly the Betrayed,' 'The Railway Porter,' 'The Ratcatcher's Daughter,' 'Clara Cline' (one of the sweetest and best of his own compositions), 'Robinson Crusoe,' and the burlesque ditties of 'Alonzo the Brave' and 'Richard the Third,' &c., were embodied with so much dramatic spirit, in appropriate costume, with his rich voice and power of mimicry, that he virtually founded a new class of drawing-room entertainment, and gave such satisfaction that 'Evans's' of Covent Garden ('Paddy Green's') and Charles Morton's Canterbury Hall owed chiefly to him their popularity. He has been hailed as the virtual founder of the music-hall entertainment. He joined Conquest at the Royal Grecian, enacting 'Nobody' with a 'buffo' song in E. Laman Blanchard's extravaganza of 'Nobody in London,' playfully

satirising the Great Exhibition excitement of 1851. He twice appeared at Windsor Castle before her majesty at her court theatricals. In August 1852 he was at St. James's Theatre. In 1860, after immense success in provincial towns, he returned to America. The vessel encountered such stormy weather that his health was permanently injured. He had been wonderfully robust, but the seeds of consumption became rapidly developed after his return to London in 1862. Always of singularly amiable disposition, devoid of jealousy or malice, and of domestic habits, although with such genial sociality that his company was sought and welcomed everywhere, he was invited to Blandford in Dorsetshire, to recruit his health if possible, by his friend, Mr. Robert Eyers of the Crown Hotel. He was kindly received, but soon afterwards died, on 11 March 1864. He was buried in the cemetery at Blandford on 15 March, and a monument has been erected by his friends. Few comedians have been better loved, or, on the whole, passed through life so successfully. Collections of 'Sam Cowell's Songs,' and photographic portraits of him in character, used to be enormously numerous, and popular. Wherever he went he was loved, and by all who had known him he was mourned. His only fault was improvidence. An excellent full-length portrait of him as 'Billy Barlow' was painted in oils by Richard Alexander, Edinburgh, 1842.

[Personal knowledge; Scotsman and the Era, chiefly of 1864; private memoranda; brief Sketch of the Life of Sam Cowell, prefixed to Sam Cowell's Collection of Comic Songs, Edinburgh, 1853.]

J. W. E.

COWEN, WILLIAM (*fl.* 1811–1860), landscape painter, was a native of Rotherham in Yorkshire. He travelled a great deal, making many sketches in the United Kingdom, and was liberally patronised by Earl Fitzwilliam, at whose expense he proceeded through Switzerland to Italy; there he studied for some time, returning with a stock of landscape sketches, which he turned to good account during a long career as an artist. He first appears as an exhibitor at the Society of Artists in 1811. In 1823 he exhibited at the British Institution, sending three landscapes, two Irish and one Swiss; and he continued to be a constant contributor of landscapes to that exhibition up to 1860. He first exhibited at the Royal Academy in 1824, and contributed several landscapes up to 1839. In 1840 Cowen started with his sister on a visit to Corsica, then an unexplored country for artists, and resided for some time in that island, making many sketches. In 1843 he published a series of twelve etchings of Corsica, especially of scenes connected with the early life of Napoleon Bonaparte. These were very favourably criticised, and afterwards with two additions formed the illustrations to a book Cowen published in 1848, called 'Six Weeks in Corsica,' containing an account of his adventures and some translations of Corsican poetry. After his return from Corsica, Cowen took up his residence at Gibraltar Cottage, Thistle Grove, Old Brompton, and in 1844 contributed to the fresco competition in Westminster Hall a view of 'Kilchurn Castle, Loch Awe, Scotland.' In 1848–9 he contributed several of his landscape works to the Free Exhibition of Modern Art at Hyde Park Corner. Besides the etchings of Corsica mentioned above, Cowen published an etching of a church in 1817, 'Six Views of Italian and Swiss Scenery' in 1824; 'A View of Rotherham,' published 1826 in Rhodes's 'Yorkshire Scenery,' in which there are also two engravings of Roche Abbey from Cowen's drawings; 'Six Views of Woodsome Hall,' lithographs, published in 1851; two large aquatints of Harrow-on-the-Hill and Chatsworth; a lithograph view of Kirkstall Abbey, and a lithographed portrait of Jan Tzatzoe, a Kaffir chief. The date of Cowen's death is uncertain, but it was probably in 1860 or 1861.

L. C.

COWHERD, WILLIAM (1763–1816), sect-founder, was born at Carnforth, Lancashire, in 1763. Little is known of his early life. He describes himself as 'formerly classical teacher in Beverley College,' an institution for the preparation of candidates for the ministry, and from Beverley he went to Manchester as curate to John Clowes [q. v.], the Swedenborgian rector of St. John's. Leaving Clowes, he preached in the Swedenborgian 'Temple,' Peter Street, for a short time before 1800, in which year he opened a chapel, called Christ Church, built for himself in King Street, Salford. Here he founded a congregation on Swedenborgian principles; he is said to have been the only man who ever read through all Swedenborg's Latin writings. His preaching, into which he freely introduced his radical politics, made him a favourite with the populace. Cowherd broke with the Swedenborgians after their conference at Birmingham in 1808, mainly on the ground of renewed attempts to esta-

blish what he called 'a Swedenborgian priesthood.' On 28 June 1809 a rival conference met in Cowherd's chapel, and continued its sittings till 1 July. It was attended by four ministers, Joseph Wright of Keighley, George Senior of Dalton, near Huddersfield, Samuel Dean of Hulme, and Cowherd, with a considerable number of laymen, including Joseph Brotherton [q. v.], afterwards M.P. for Salford. This conference formulated a scheme of doctrine, which has a strong Swedenborgian tinge. No mention is made of vegetarianism or of teetotalism in the minutes of this conference, but in the same year the practice of both was made imperative in Cowherd's congregation. The new religious body thus formed took the name of Bible Christian, a designation also used by several other dissimilar religious bodies. Cowherd, on 26 March 1810, opened a grammar school and academy of sciences; he had a large number of boarders, and was assisted by two masters. He built Christ Church Institute, Hulme, which came afterwards into the hands of James Gaskill, who left an endowment for its support as an educational institution. Besides being a working astronomer, Cowherd was a practical chemist, and he treated the ailments of the poor with remedies of his own, so that he was familiarly known as Dr. Cowherd. In 1811 he had a project for a printing office, to bring out cheap editions of Swedenborg's philosophical and theological works. Robert Hindmarsh [q.v.], the leader of the Swedenborgian sect, went down to Manchester to assist the scheme; but Hindmarsh and Cowherd differed about abstinence and other matters, and soon came to a quarrel. Seceders from Cowherd and from Clowes built in 1813 a 'New Jerusalem temple' for Hindmarsh in Salford. Cowherd died on 24 March 1816. He was buried beside his chapel; inscribed upon his tomb is a brief epitaph written by himself, with the curious summary (adapted from Pope), 'All feared, none loved, few understood.' Cowherd's portrait shows a good-looking man, with a rather florid countenance. His congregation (to which Joseph Brotherton ministered for many years) still flourishes in a new chapel (1868) in Cross Lane, Salford, and possesses a valuable library, founded by Cowherd. Its members dislike the name 'Cowherdite' by which they are often called. There is a sister congregation in Philadelphia, founded by Rev. William Metcalfe.

Cowherd published: 1. 'Select Hymns for the use of Bible Christians,' which reached a seventh edition in 1841. Posthumous was 2. 'Facts Authentic, in Science and Religion: designed to illustrate a new translation of the Bible,' part i. Salford, 1818, 4to; part ii. Salford, 1820, 4to ('printed by Joseph Pratt, at the Academy Press, Salford;' it consists of a compilation of extracts from various authors, those in part i. arranged under topics, those in part ii. under the several books of the Bible; the paging of the two parts runs on).

Alfred Hardy (who assisted in Cowherd's school) and from Rev. James Clark, minister of Cross Lane Chapel.] A. G.

COWIE, ROBERT, M.D. (1842–1874), descriptive writer, was born in 1842 at Lerwick, the capital of the Shetland Islands, where both his father and uncle were well-known medical practitioners. He was educated partly at Aberdeen, where he took the degree of M.A., and at Edinburgh, where he was a favourite student of Sir James Y. Simpson. On the death of his father he took up his medical practice, and was held in high esteem, both for his professional and general character. He died suddenly in 1874, in his thirty-third year. Cowie was an enthusiastic lover of his native islands, one proof of which was his selection of certain physical peculiarities of the Shetland people as the subject of his thesis when applying for the degree of M.D. At a later period he contributed to the International Congress at Paris an article on 'health and longevity,' bringing out a wonderful prolongation of life beyond the average among the Shetlanders, which excited considerable notice. The interest excited by these papers led Cowie to prepare them for publication; but to make a more complete and popular volume much other matter was added. The book entitled 'Shetland, Descriptive and Historical' was the result, the latter part being a descriptive account of the several islands of the group. It forms one of the best accounts of Shetland that have appeared.

COWLEY, Baron. [See Wellesley, Henry, 1773–1847].

COWLEY, first Earl. [See Wellesley, Henry Richard Charles, 1804–1884.]

COWLEY, ABRAHAM (1618–1667), poet, was born in London in 1618. He was the seventh and posthumous child of his father, Thomas Cowley, a stationer (see *Notes*

and Queries, 4th ser. xi. 340, 371, 389, 429, 450, 530), who left 1,000*l.* to be divided among his children. His mother obtained his admission as a king's scholar at Westminster. He had already been drawn to poetry by reading a copy of the 'Faërie Queen,' which lay in his mother's parlour (Essay XI., 'On Myself'). A collection of five poems called 'Poetical Blossoms' was published in 1633. A second edition, with the addition of 'Sylva, or dyvers copies of verses,' appeared in 1636, and a third in 1637. It is probable that no poet has given more remarkable proofs of precocity. He says in his preface that he wrote one of the pieces, the 'Pyramus and Thisbe,' at the age of ten, and the 'Constantius and Philetus' two years later. Cowley's masters could never force him to undertake the drudgery of learning his grammar, and excused him on the ground that his natural quickness made it needless. Perhaps his scholarship suffered, for he is said to have been an unsuccessful candidate for election to Cambridge in 1636. On 14 June 1637, however, he became a scholar of Trinity College (see extracts from College Register in J. R. Lumby's preface to Cowley's *Prose Works*, 1887). At the university he continued his poetical activity. In 1638 he published a pastoral drama called 'Love's Riddle,' written about the age of sixteen. On 2 Feb. 1638 his Latin comedy called 'Naufragium Joculare' was played before the university by members of Trinity College, and was published soon afterwards. An elegy on the death of an intimate friend, William Harvey, introduced him to Harvey's brother John, who rendered him many services, and through whom, or through Stephen Goffe (Wood), he became known to Lord St. Albans. He was B.A., 1639; 'minor fellow,' 30 Oct. 1640; and M.A., 1642. He appears never to have become a 'major fellow' (Lumby). When Prince Charles was passing through Cambridge in 1641, he was entertained (12 March) by a comedy, 'The Guardian,' hastily put together for the purpose by Cowley. It was not printed till 1650, when Cowley was out of England. Cowley (preface to 'Cutter of Coleman Street') says that it was several times acted privately during the suppression of the theatres. In 1658 he rewrote it, and it was performed as 'The Cutter of Coleman Street' on 16 Dec. 1661 at Lincoln's Inn Fields, when Pepys was present. Cowley published it in 1663. It was first taken (as he tells us) for an attack upon the 'king's party,' and, as Dryden told Dennis (dedication to 'Comical Gallant'), was 'barbarously treated,' but afterwards succeeded tolerably. According to Downes it ran for 'a whole week' with a full house.

Cowley meanwhile continued to write poetry, composing many occasional pieces and great part of his 'Davideis' at the university. In 1643–4 he was ejected from Cambridge and retired to Oxford, whither his friend Crashaw had preceded him. A satire called 'The Puritan and the Papist,' published in the same year, and republished in a collection called 'Wit and Loyalty revived' (1682), is attributed to him by Wood, and was first added to his works by Johnson (it is also in 'Somers Tracts,' v. 480–7). At Oxford he settled in St. John's College, and here became intimate with Lord Falkland and other royalist leaders. He became a member of the family of Jermyn, afterwards earl of St. Albans, and in 1646 followed the queen to France. Here he found Crashaw in distress, and introduced him to the queen. Cowley was employed in various diplomatic services by the exiled court. He was sent on missions to Jersey, Holland, and elsewhere, and was afterwards employed in conducting a correspondence in cipher between Charles I and his wife. His work, we are told, occupied all his days and two or three nights a week. The collection of his poems called 'The Mistress' appeared in London in 1647. They became the favourite love poems of the age. Barnes (*Anacreon*, 1705, xxxii.) states that whatever Cowley may say in his poetry, he was never in love but once, and then had not the courage to avow his passion. Pope says that Cowley's only love was the Leonora of his 'Chronicle' who married Sprat's brother (Spence, p. 286). In 1648 two satires, 'The Four Ages of England, or the Iron Age,' and 'A Satyre against Separatists,' were published in one volume under his name, but were disavowed by him in the preface to his 'Poems' (1656). Though he only mentions the 'Iron Age,' he doubtless refers to the whole volume.

In 1656 Cowley was sent to England, in order (as Sprat says) that he might obtain information while affecting compliance and wish for retirement. He was arrested by mistake for another person, but was only released upon bail for 1,000*l.*, for which Dr. (afterwards Sir) Charles Scarborough [q. v.], to whom one of his odes is addressed, became security. He remained under bail until the Restoration. In the preface to his next book (1656) he declares his intention of abandoning poetry and 'burying himself in some obscure retreat in America.' A passage in which he intimates a disposition to acquiesce in the new order was omitted by Sprat from the preface when republished, and provoked, as Sprat admits, some disapproval from his own party. This book is his most important

collection of poems. It consists of (1) 'Miscellanies,' including, with his juvenile pieces, many later poems, especially the spirited 'Chronicle' and the fine elegies on Harvey and Crashaw; (2) 'The Mistress,' reprinted from the edition of 1647. (3) 'Pindarique Odes;' (4) the 'Davideis;' four books out of twelve as originally designed. This ponderous epic was chiefly written at college, and Cowley says that he has now neither the leisure nor the appetite to finish it. There is quite enough as it is. The preface refers to an unfinished poem 'On the Civil War.' A poem professing to be the one mentioned was published in 1679, and is in later collections. He now took to medicine, as a blind, according to Sprat, for his real designs. He was created M.D. at Oxford on 2 Dec. 1657, by an order from the government, which, according to Wood, gave offence to his friends. He retired to 'a fruitful part of Kent to pursue the study of simples,' and wrote a Latin poem, 'Plantarum Libri duo' (1662); it was included in 'Poemata Latina in quibus continentur sex Libri Plantarum et unus Miscellaniorum,' 1668 (2nd ed. 1678).

Cowley again retired to France. He tried to put himself forward at the Restoration. In 1660 he published a heavy 'Ode upon the Blessed Restoration . . .' In 1661 appeared his fine 'Vision, concerning his late pretended Highness, Cromwell the Wicked; containing a Discourse in Vindication of him by a pretended Angel and the confutation thereof by the author, Abraham Cowley.' In 1661 appeared also 'A Proposition for the Advancement of Experimental Philosophy.' He also wrote an 'Ode to the Royal Society.' 'Dr. Cowley' took an interest, like all the cultivated men of the time, in the foundation of this society, and was one of the first members incorporated (Birch, *Royal Society*, i. 4). He was associated with Evelyn and others in a project for the foundation of a philosophical college, for which he gives a plan in his 'Essays.' His 'Ode to Hobbes' gives further proof of his interest in new speculations. In 1663 appeared 'Verses upon several occasions' (after a piratical publication in Dublin). In one of these, called 'The Complaint,' he describes himself as 'the melancholy Cowley,' and bewails his neglect. He applied unsuccessfully for the mastership of the Savoy (*Cal. State Papers*, Dom. 1661–2, p. 210). Some verses of the 'Session of the Poets' in 'State Poems' 1697 allude to this and the failure of his play:—

Savoy missing Cowley came into the court,
Making apologies for his bad play;
Every one gave him so good a report,
That Apollo gave heed to all he could say.
Nor would he have had, 'tis thought, a rebuke,
Unless he had done some notable folly;
Writ verses unjustly in praise of Sam Tuke,
Or printed his pitiful melancholy.

His claims were at last acknowledged by a favourable lease of the queen's lands obtained for him by the Earl of St. Albans and the Duke of Buckingham. He was now enabled to live at his ease in the retirement which he often professed to love. He settled at Barn Elms, and afterwards in the 'Porch House' at Chertsey. He removed thither in April 1665. His health declined, and from a letter to Sprat, 21 May 1665, preserved by Peck, we find that his tenants did not pay their rents, and that a fall had injured his ribs. He died on 28 July 1667; Sprat declares that his death was occasioned by his 'very delight in the country and the fields.' He caught cold, according to Sprat, after apparently recovering from his accident, by staying out too long 'amongst his labourers in the meadows.' A different tradition, preserved by Pope (*Spence's Anecdotes*, p. 13), states that Cowley and Sprat came home late from a too jovial dinner with a neighbour and had to pass the night under a hedge. Mr. Stebbing points out that there is probably some confusion with a 'dean' mentioned in a letter from Cowley to Sprat, probably the nickname of some convivial neighbour. Warton says that his income was about 300*l.* a year, and that in his last years he avoided female society. He was buried with great pomp in Westminster Abbey, near Chaucer and Spenser, and Charles II declared that he had not left a better man behind him in England. His will (dated 28 Sept. 1665) leaves the care of his works to Sprat. The property is left to his brother Thomas, with a good many small legacies. He gave some books to Trinity College. Cowley's house is now called by his name, and is on the west side of Guildford Street, near the railway station. The porch from which it was named was removed by Alderman Clarke, a later occupant of the house, in 1786 (Thorne, *Environs of London*).

Cowley's reputation was at its highest during his lifetime, when he was regarded as the model of cultivated poetry. Dryden's frequent references to Cowley show that his reputation was beginning to decline. Dryden says (*Essay on Heroic Plays*, 1672) that 'his authority is almost sacred to me.' He elsewhere calls Cowley the darling of his youth (*Essay on Satire*, 1693). He complains of the 'Davideis' as full of 'points of wit and quirks of epigram' (*Essay on Satire*). He greatly prefers the 'Pindaric' odes to the 'Mistress,' and thinks Cowley's latest com-

positions undoubtedly the best of his poems. From Dryden's preface to the 'State of Innocence' (1674) it seems that the odes were already condemned for their 'fustian' by some critics, and in the preface to his 'Fables' (1700) he remarks that Cowley is so sunk in reputation that now only a hundred copies are sold in a twelvemonth instead of ten editions in ten years. Addison, in his 'Epistle to Sacheverell' (1694), is enthusiastic over the odes, but hints that Cowley's 'only fault is wit in its excess.' Congreve, in the preface to his 'Ode upon Blenheim,' complains, while professing the highest admiration for Cowley, of the irregularity of his stanzas in the so-called 'Pindaric Ode.' The precedent set by Cowley of formless versification has found many imitations in spite of Congreve's protests and the later influence of Collins and Gray. Cowley's odes themselves have followed most of his poetry into oblivion. Pope's often-quoted phrase, epistle to Augustus (75–78), gives the opinion which was orthodox in 1737:—

> Who now reads Cowley? If he pleases yet,
> His moral pleases, not his pointed wit;
> Forgot his epic, nay Pindaric art,
> But still I love the language of his heart.

Cowley was still mentioned with high respect during the eighteenth century, and was the first poet in the collection to which Johnson contributed prefaces. Johnson's life in that collection was famous for its criticism of the 'metaphysical' poets, the hint of which is given in Dryden's 'Essay on Satire.' It assigns the obvious cause for the decline of Cowley's fame. The 'metaphysical poets' are courtier pedants. They represent the intrusion into poetry of the love of dialectical subtlety encouraged by the still prevalent system of scholastic disputation. In Cowley's poems, as in Donne's, there are many examples of the technical language of the schools, and the habit of thought is perceptible throughout. In the next generation the method became obsolete and then offensive. Cowley can only be said to survive in the few pieces where he condescends to be unaffected, and especially in the prose of his essays, which are among the earliest examples in the language of simple and graceful prose, with some charming poetry interspersed.

The first collection of his works, in one volume folio, appeared in 1668, and in this, for the first time, were included 'Several Discourses by way of Essays in Prose and Verse.' Eight editions appeared before 1700, a ninth in 1700, and many more later. Hurd's 'Selections' appeared in 1772, and 'Works' by Aikin, 3 vols., 1802.

Two portraits of Cowley are in the Bodleian. A portrait by Lely was bought by the nation in Peel's collection. In Trinity College there is a crayon drawing in the master's lodge, presented in 1824 by R. Clarke, chamberlain of the city of London, and a portrait in the hall, probably a copy from an earlier picture. Engravings by Faithorne are prefixed to his 'Latin Poems' (1668) and to his 'Works' (1668). An engraving of him at the age of thirteen is prefixed to the 'Poetical Blossoms,' but is missing in most copies.

[Sprat's Life of Cowley (first published in Works, 1668. Sprat's life has been praised, at least as much as it deserves, for its elegance, but is provokingly wanting in detail, and Sprat thought it wrong to publish Cowley's letters, while assuring us that they were charming); Johnson's Lives of the Poets; Wood's Fasti, ii. 209–14; Langbaine, pp. 77–88; Gosse's Seventeenth Century Studies, pp. 169–203; Stebbing's Verdicts of History Reviewed, pp. 47–82; Genest's History of the Stage, i. 41, x. 62; Aubrey's Letters (1813), ii. 295–6; Miscellanea Aulica (1702), pp. 130–60 (Cowley's letters from Paris to H. Bennet, afterwards lord Arlington). A complete edition of Cowley, edited by Grosart (1880–1), forms part of the Chertsey Worthies Library. A 'memorial introduction' collects most of the information about Cowley. Nichols's Illustrations, iv. 398.] L. S.

COWLEY, HANNAH (1743–1809), dramatist and poet, was born in 1743 in Tiverton, Devonshire. She was the daughter of Philip Parkhouse, a bookseller of that town, a man of some attainments, her paternal grandmother being a cousin of Gay, who was accustomed to stay with her in Barnstaple. When about twenty-five years of age, Hannah Parkhouse married Mr. Cowley, who died in 1797, a captain in the East India Company's service. She had been some years married before the idea of writing presented itself to her. When witnessing a performance she said to her husband, in disparagement of the play, 'Why, I could write as well.' Her answer to his laugh of incredulity consisted in writing the first act of (1) 'The Runaway.' The entire play was finished in a fortnight, and sent to Garrick, by whom it was produced at Drury Lane 15 Feb. 1776. Its success was complete. It was printed in 1776, and was the precursor of (2) 'Who's the Dupe?' farce, 8vo, 1779; Drury Lane, 10 May 1779. 3. 'Albina, Countess Raimond,' a tragedy, 8vo, 1779; Haymarket, 31 July 1779. 4. 'The Belle's Stratagem,' comedy, 8vo, 1782; Covent Garden, 22 Feb. 1780. 5. 'The School for Eloquence,' interlude, not included in her printed works, Drury Lane, 4 April 1780. 6. 'The World as it goes, or a Party at Montpellier,'

comedy, not printed, Covent Garden, 24 Feb. 1781. It was played a second time 24 March 1781, under the title 'Second Thoughts are Best,' but was damned on both occasions. 7. 'Which is the Man?' comedy, 8vo, 1782; Covent Garden, 9 Feb. 1782. 8. 'A Bold Stroke for a Husband,' comedy, 8vo, 1783; Covent Garden, 25 Feb. 1783. 9. 'More Ways than One,' comedy, 8vo, 1784; Covent Garden, 6 Dec. 1783. 10. 'A School for Greybeards, or the Mourning Bride,' 8vo, 1786; Drury Lane, 25 Nov. 1786, taken from Mrs. Behn's 'Lucky Chance.' 11. 'The Fate of Sparta, or the Rival Kings,' tragedy, 8vo, 1788; Drury Lane, 31 Jan. 1788. This piece, which is poor and inflated, elicited from Parsons the actor an extempore epigram:—

> Ingenious Cowley! while we view'd
> Of Sparta's sons the lot severe,
> We caught the Spartan fortitude,
> And saw their woes without a tear.

12. 'A Day in Turkey, or the Russian Slaves,' comedy, 8vo, 1792; Covent Garden, 3 Dec. 1791. 13. 'The Town before you,' comedy, 8vo, 1795; Covent Garden, 6 Dec. 1794. These plays, with the exception of 'The School for Eloquence' and 'The World as it goes,' were printed, together with some poems and a tale, under the title of 'Works,' 3 vols. London, 8vo, 1813. An earlier collection of plays was also issued, London, 1776, 2 vols. 12mo. Many of them are included in various dramatic collections. The best are sprightly and vivacious. One or two remain in the list of acting plays, and others might be revived with a fair possibility of success. Lætitia Hardy in 'The Belle's Stratagem' has been a favourite with many between Miss Younge, the first exponent, and Mrs. Jordan, the second, and Miss Ellen Terry, whose late representation is still agreeably remembered. Doricourt, the hero, has also been played among others by Lewis, Kemble, and Mr. Irving. Mrs. Cowley prided herself on her originality and her indifference to stage triumphs. The boast was even put forward on her behalf that she never witnessed the first performance of one of her pieces. Her anxiety on their behalf, however, involved her in a newspaper warfare with Hannah More, whom she taxed with plagiarism, and in quarrels with the managers of Drury Lane and Covent Garden, to whom, in a preface to 'Albina,' subsequently suppressed, she imputed, most probably in error, some misuse of her manuscript. In her preface to the 'Town before you' she expresses her disgust at the vitiated taste of the town, and her determination to write no more for the stage, a resolution to which, unfortunately, she adhered. Her plots are, as a rule, her own, though she is not above using the work of others, and is careful when so doing to minimise her indebtedness. Some of her characters are freshly conceived, though their motives to action are not seldom inadequate. Her poems include 'The Maid of Arragon,' in two books, of which one only was printed, London, 1780; 'The Siege of Acre,' in four books, published in 1799 in the 'Annual Register,' and reprinted in six books in 1801; 'The Scottish Village, or Pitcairn Green,' 4to, 1787; 'Edwina,' a poem extracted from Hutchinson's 'History of Cumberland,' Carlisle, 1794, 4to. Under the signature of Anna Matilda she carried on with Robert Merry, 'Della Crusca,' a poetical correspondence in the 'World.' These compositions were printed with those of 'Della Crusca,' in two volumes, with portraits of the two authors; the likeness of Mrs. Cowley presenting a bright, piquant face. In common with others of the school Mrs. Cowley is lashed by Gifford in the 'Baviad and Mæviad.' Merry and she were at the outset unknown to each other, and the raptures expressed were Platonic. Gifford makes some mirth out of the first meeting between 'Della Crusca' and his 'tenth Muse,' who had 'sunk into an old woman.' The name Anna Matilda which she adopted in the correspondence has passed into a byword for sentimental fiction. Her verse is of the namby-pamby order, and merits Gifford's censure. On the strength of her comedies, however, she will maintain a place in literature. One or two well-written letters from her are printed in the 'Garrick Correspondence,' Lond. 1832, pp. 222 et seq. In the 'History of the Theatres of London,' 1796, Oulton republishes the newspaper correspondence between Mrs. Cowley and Hannah More.

Mrs. Cowley died 11 March 1809 at Tiverton, leaving a son and daughter. The latter married the Rev. David Brown of Calcutta [q. v.]

[Life of Mrs. Cowley prefixed to her Works, 1813; Genest's Account of the Stage; Baker, Reed, and Jones's Biographia Dramatica; Gifford's Baviad and Mæviad; Poems by Anna Matilda, Lond. 2 vols. 8vo, 1788; British Album, 1792, 12mo.] J. K.

COWPER. [See also COOPER and COUPER.]

COWPER, SIR CHARLES (1807–1875), Australian statesman, was born at Dryford, Lancashire, 26 April 1807. His father, William Cowper (1780–1858), was an archdeacon of New South Wales, and is separately noticed. Charles Cowper, like his younger brother,

James Macquarie Cowper, dean of Sydney, who graduated at Oxford, spent his boyhood under the paternal roof. He entered the commissariat department under Commissary-general Wemyss, and in 1825 was appointed commissariat clerk. The year after he was appointed by Governor Darling secretary of the Church and School Lands Corporation, to which a very large area of the best lands in the colony had been granted by royal charter, in trust to the church of England, for the promotion of religion and education. He performed this duty until 1833, when, in pursuance of a condition in the original charter, the corporation was dissolved, and the trust lands applied to less exclusive purposes. In 1831 Cowper married Eliza, second daughter of Daniel Sutton of Wivenhoe, near Colchester, England, by whom he had six children. When the lands above referred to reverted to the government, with a trust, as the authorities contended, for general religious and educational purposes, Cowper was offered the post of agent for these lands by Governor Bourke, which he declined, partly on the score of health, preferring farming pursuits. He removed to Argyll county, occupied some sheep-runs on the Murray, and applied himself to sheep and general farming. For a good many years he pursued the life of a country gentleman; was an active churchman and magistrate, and did well in his grazing and farming transactions. In 1843 Cowper stood for Camden county, as a candidate for the Legislative Council of the colony, then a mixed body consisting of crown nominees and elected representatives. He was defeated by the attorney-general, Therry, by a majority of ten votes; but was afterwards returned for Cumberland county, by a large majority over his opponents, Lawson and James Macarthur. In 1846 he took up the subject of colonial railways, and was appointed chairman of a committee formed to carry out the scheme. In the Legislative Council he exerted himself with good effect to secure various reforms, notably the more humane treatment of lunatics. In 1850 he took a leading part in the organised opposition to further transportation of convicts from the mother country to New South Wales, and was chairman of the meeting of delegates convened at Sydney for that purpose. During the next few years he introduced the bill for incorporating Sydney grammar school and its affiliated colleges; he also was an active supporter of the volunteer force, which was started in 1854, and of the project for forming a naval brigade for colonial defence. In 1856—in which year responsible government was established in New South Wales—Cowper was returned at the head of the poll as one of the representatives for Sydney, and was expected to be the first premier. He had previously resigned his post as chairman of the railway company, when the railways were handed over to government, and a service of plate valued at 500*l.* had been voted to him. He had also been offered by Sir Charles Fitzroy the post of civil commissioner at Sydney, with a salary of 1,000*l.* a year, which he declined. On the advice, apparently, of Sir George Macleay, Governor Sir William Denison sent for Mr. Donaldson to form a ministry. Donaldson offered Cowper the post of colonial secretary, which he declined. The Donaldson ministry resigned after a few months, and Sir W. Denison then sent for Cowper, and he took the post of colonial secretary, but resigned after being six weeks in power. The succeeding Watson-Parker ministry resigned in September 1857, when Cowper came into office a second time. The difficulties and manifold absurdities of these early days of responsible government are noticed under date in the first volume of the late Sir William Denison's 'Varieties of Viceregal Life.' The second Cowper ministry had a longer spell of office than its predecessors, and carried many important measures. In 1858 universal suffrage and the ballot were established. The same year the Municipalities Act was passed establishing some forty municipalities in the colony. In 1859 Cowper was defeated on his Education Bill, and resigned, being succeeded by Mr. Forster, who resigned in March 1860, when the Robertson ministry came in, with Cowper as colonial secretary, but resigned in 1863. In 1860 a land bill was introduced, and carried the year after, and in 1862 Cowper introduced a bill for prohibiting further grants for purposes of public worship. Although himself a staunch churchman, Cowper always steadily upheld the political principle that all denominations should be on an equal footing in relation to the state. All the measures thus carried settled for the time questions which were agitating the public mind. In February 1865 Cowper again came into office. The administration was embarrassed by serious financial difficulties, and to save the credit of the colony Cowper introduced and carried a bill for the imposition of *ad valorem* duties, which cost him his popularity, and in June 1865 he retired into private life; but at the beginning of 1870 took his place, for the fifth time, at the head of the administration, in the Robertson cabinet, which had come into power in 1868. Changes again followed, and in December 1870 Cowper was appointed agent-general for New South

Wales, the duties of which office he discharged with much advantage to the colony until a long and serious illness disabled him from further work. He died 20 Oct. 1875. Four years before his death Cowper was made K.C.M.G. His country estate, named Wivenhoe, after Lady Cowper's native place, had previously been settled on that lady by public subscription, in recognition of the eminent services of her husband to the colony of New South Wales.

[The biographical details here given are from Heaton's Handbook of Australian Biography. Braim's Hist. New South Wales, and Governor Sir William Denison's Varieties of Viceregal Life (London, 1870), vol. i., may be consulted. Particulars of the fruits of Cowper's public measures must be sought in the Colonial Statistical Returns.] H. M. C.

COWPER, DOUGLAS (1817–1839), painter, born at Gibraltar 30 May 1817, was third son of a merchant there, who removed to Guernsey. Here Cowper indulged an innate fondness for painting, and copied the few pictures that were to be found in that island. Eventually, overcoming the repugnance of his family to his being an artist, he came to London, and, after some preliminary lessons from Mr. Sass, entered the Royal Academy schools. Here he made such rapid progress that in four months he gained the first silver medal for the best copy of Poussin's 'Rinaldo and Armida' in the Dulwich Gallery. While earning a livelihood by portrait painting he devoted himself assiduously to the higher branches of his art, and in 1837 exhibited at the Royal Academy 'The Last Interview,' followed in 1838 by 'Shylock, Antonio, and Bassanio,' and in 1839 by 'Kate Kearney,' 'Othello relating his Adventures,' and 'A Capuchin Friar.' These last three works were very much admired, and the first two named were engraved by John Porter and E. Finden respectively. He also exhibited at the British Institution and the Society of British Artists. His pictures all found purchasers, and he seemed on the threshold of a prosperous career. Unfortunately in 1838 he began to show signs of consumption, which increased alarmingly in 1839. After a fruitless visit to the south of France he returned to Guernsey, and died on 28 Nov. 1839.

COWPER, EDWARD (1790–1852), inventor, was born in 1790. In 1816, when he described himself as of 'St. Mary, Newington Butts, ironmonger and mechanist,' he obtained a patent (No. 3974) under the title of 'a method of printing paper for paperhangings and other purposes,' of which the chief feature consisted in curving stereotype plates and fixing them on cylinders for printing long rolls of paper. In 1818, styling himself as 'of Nelson Square, printer,' he patented (No. 4194) certain improvements in printing, which consisted of a method for a better distribution of the ink, and an improved manner of conveying the sheets from one cylinder to another. This was the origin of the 'perfecting machine,' which prints on both sides of the paper at once, and is the model on which the great majority of such machines are contrived down to the present day. In conjunction with the inking arrangement, it formed the first machine, as distinguished from a press, on which good bookwork could be executed. Cowper did not invent the soft composition for distributing the ink, which superseded the old pelt-balls in hand-presses, but devised the system of forming it into rollers. He went into partnership as a printer with his brother-in-law, Augustus Applegath; their business in Duke Street, Stamford Street, was afterwards taken over by William Clowes [q. v.], and they exclusively devoted themselves to machine-making. In 1827 they jointly invented the four-cylinder machine, which Applegath erected for the 'Times,' superseding Koenig's machine. The rate of printing was five thousand an hour, an enormous acceleration of speed. Until lately nearly all country newspapers were produced by machines of this design. For many years Edward was in partnership with his brother Ebenezer, and the machines of Messrs. E. & E. Cowper were widely used, not only in Great Britain, but throughout Europe. They also invented a cylinder card-printing machine. Towards the end of his life Edward Cowper was professor of manufacturing art and mechanics at King's College, London. His improvements were of extreme importance, and he may be said to have done for the printing machine what Watt did for the steam-engine. He was the improver, as Nicholson was the projector, and Koenig the first inventor, of the steam printing machine. He died at Kensington 17 Oct. 1852, in his sixty-third year. His brother EBENEZER, who was born in 1804, and died at Birmingham 17 Sept. 1880, aged 76, carried on the practical part of the business.

H. R. T.

COWPER, HENRY (1758–1840), lawyer, was the third son of General Spencer Cowper, by Charlotte, daughter of John Baber; grandson of William Cowper, clerk of the parliaments 1739–40, and great-grandson of Spencer Cowper, judge (1669–1727) [q. v.] (Pedigree in Clutterbuck's *Hertfordshire*, ii. 195). He was called to the bar at the Middle Temple 26 May 1775. From 1785 to 1826 he was deputy clerk of the parliaments and clerk assistant of the house of lords. He published in 1783 'Reports of Cases in the Court of King's Bench from Hilary term 14 George III to 18 George III' (3 vols.); second edition 1800. He died at Tewin Water 28 Nov. 1840. He married his cousin-german, Maria Judith, eldest daughter of Rev. John Cowper, D.D., rector of Berkhampstead St. Peter's, but had no issue. By his will he left a sum of money for educating the poor children of Hertingfordbury parish.

[Clutterbuck's Hertfordshire, ii. 195; Cussans's Hertfordshire, ii. 118; Gent. Mag. new series, 1841, xv. 320; Brit. Mus. Cat.]

COWPER, MARY, first Countess Cowper (1685–1724), daughter of John Clavering of Chopwell, Durham, was married to William, first earl Cowper [q. v.], in 1706. The marriage was kept secret for some months (September 1706 to February 1707). The first letter which she wrote to her husband after the marriage bears the following endorsement by him: 'First letter received from my wife, formerly Mrs. Clavering, having been privately married to her without consummation, by which it appears I judged rightly of her understanding; I hope also of her other good qualities; I was not induced to the choice by any ungovernable desire; but I very coolly and deliberately thought her the fittest wife to entertain me and to live as I might when reduced to a private condition, with which a person of great estate would hardly have been contented,' &c. She seems to have been a lady of considerable attractions, intelligence, and accomplishments. On the accession of George I she was appointed a lady of the bedchamber to the Princess of Wales, with whom she had corresponded for some years, and whose confidante she became. Though of a Jacobite family, she ardently espoused her husband's political principles. On entering the royal household she began to keep a diary, an imperfect copy of which was lent in manuscript to Lord Campbell, and freely used by him for the purpose of his biography of Lord Cowper. It was edited, with the addition of a subsequently discovered fragment, from the original manuscript, with an introduction, notes, and appendices, by the Hon. Spencer Cowper in 1864 (London, 8vo). It consists of two fragments, the first covering the period between October 1714 and October 1716, the second being the record of little more than two months, April and May 1720, during which the negotiations for the reconciliation of the king and Prince of Wales were in progress. The records of the intermediate and subsequent periods were destroyed by Lady Cowper in 1722, when her husband fell under suspicion of complicity in the Jacobite plot, and she was apprehensive lest his house might be searched. The earlier papers probably contained matter relating to the quarrel between the king and the prince which would not have been grateful to the former. The reason for destroying the later papers is not apparent, as it seems very unlikely that Cowper was really involved in the conspiracy. Lady Cowper survived her husband by about four months, dying on 5 Feb. 1723–4.

[Diary of Mary, Countess Cowper, 1714–20, edited by the Hon. Spencer Cowper, London, 1864, 8vo, 2nd edition, 1865; Hist. Reg. Chron. Diary, 1724, p. 10.]

J. M. R.

COWPER, SPENCER (1669–1728), judge, was the younger brother of William Cowper the chancellor [q. v.] He was born in 1669, educated at Westminster, called to the bar, and in 1690 made controller of the Bridge House estates, with a residence at the Bridge House, St. Olave's. He went the home circuit and was acquainted with a quaker family at Hertford, named Stout, who had been supporters of his father and brother at elections. The daughter, Sarah Stout, fell in love with him, though he was already married, and became melancholy upon his avoiding her company. At the spring assizes in 1699 he was at her house in the evening, having to pay her the interest on a mortgage. He returned to his own lodgings, and next morning she was found dead in the river. Cowper, with three lawyers who had spent that night at Hertford and gossiped about Sarah Stout, were accused of murdering her. They were tried before Baron Hassell on 16 July 1699. There was absolutely no direct evidence: the pro-

secution relying chiefly upon the argument that, as the body had floated, the girl must have been put into the water after death, and therefore had not drowned herself. To meet this assumption evidence was given by the famous physicians Garth, Hans Sloane, and William Cowper (no relation to the defendant). The judge was singularly feeble, but the defendants were acquitted. Their innocence is beyond a doubt, as was admitted by impartial people at the time (LUTTRELL, iv. 518, 539). The prosecutions were said to be suggested by a double motive. The tories of Hertford wished to hang a member of an eminent whig family, and the quakers to clear their body of the reproach of suicide. Pamphlets were published on both sides, and an attempt was made to carry on the case by an appeal of murder. The judges, however, refused the writ, considering (besides various technical reasons) that the prosecution was malicious.

Cowper represented Beeralston in the parliaments of 1705 and 1708. He was one of the managers of the impeachment of Sacheverell, and lost his seat in the reaction which followed. In 1715, when he was made a king's counsel, he was elected member for Truro; in 1714 he had become attorney-general to the Prince of Wales, and in 1717 chief justice of Chester. On 24 Oct. 1727 he was promoted to the office of judge of the common pleas. He died 10 Dec. 1728. He was buried at Hertingfordbury, where there is a monument to him by Roubillac.

Cowper was the grandfather of William Cowper the poet, in whose life several of this judge's descendants are mentioned. By his first wife, Pennington Goodere, Spencer Cowper had three sons and a daughter. William, the eldest son, was clerk of the parliaments, and died 14 Feb. 1740, when the patent of his office passed to his eldest son, William, of Hertingfordbury, who is mentioned in the poet's life as 'Major Cowper,' and who died in 1769. Spencer, the second son of the clerk of the parliaments and brother of Major Cowper, was in the guards, commanded a brigade in the American war, became lieutenant-governor of Tynemouth, and died at Ham, Surrey, 13 March 1797 (*Notes and Queries*, 2nd ser. xi. 248). He is mentioned in the poet's life as 'General Cowper.' The judge's second son, John, was the poet's father. His third son, Ashley, was barrister, clerk of the parliaments, and died 1788. The profits of his 'very lucrative office' were not his but his nephew's, General Cowper (SOUTHEY's *Cowper*, vi. 259). Ashley Cowper had three daughters: Harriet (*d.* 15 Jan. 1807), married to Sir Thomas Hesketh (*d.* March 1778); Elizabeth Charlotte, married to Sir Archer Croft; and Theodora Jane, the poet's first love, who died in 1824. The judge's daughter, Judith, married Colonel Martin Madan, M.P., and by him was mother of Martin Madan, author of 'Thelyphthora,' of Spencer Madan, bishop of Peterborough, and of a daughter, who married her cousin Major (William) Cowper, and died 15 Oct. 1797 in her seventy-first year. Some of Mrs. Madan's poems will be found in 'Poems by Eminent Ladies' (1755), ii. 137–44.

S.

COWPER, SPENCER, D.D. (1713–1774), dean of Durham, youngest son of William, earl Cowper [q. v.], lord chancellor of Great Britain, was born in London in 1713, and educated at Exeter College, Oxford (B.A. 1731, M.A. 1734, B.D. and D.D. 1746). He became rector of Fordwich, Kent, prebendary of Canterbury 1742, and dean of Durham 1746. He died at Durham on 25 March 1774, and was buried in the east transept of the cathedral, called the Nine Altars, where a monument was erected to his memory.

Besides some occasional sermons he published: 1. 'A Speech made at the Enthronement and Installation of Richard [Trevor], Bishop of Durham,' Durham, 1753, 4to. 2. 'Eight Discourses preached on or near the great festivals in the cathedral church of Durham. To which is added a Letter to a young lady on the Sacrament, and on the Evidence for the Christian Religion,' London, 1773, 8vo.

COWPER or COUPER, WILLIAM (1568–1619), bishop of Galloway; son of John Couper, merchant-tailor, of Edinburgh, was born in 1568. After receiving some elementary instruction in his native city, and attending a school at Dunbar for four years, he entered in 1580 the university of St. Andrews, where he graduated M.A. in 1583. He then went to England, where he was for some years assistant-master in a school at Hoddesdon, Hert-

fordshire. Returning to Edinburgh he was licensed a preacher of the church of Scotland in 1586, and admitted minister of the parish of Bothkennar, Stirlingshire, in August 1587, whence he was translated to the second charge of Perth in October 1595. He was a member of six of the nine assemblies of the church from 1596 to 1608. Although one of the forty-two ministers who signed the protest to parliament, 1 July 1606, against the introduction of episcopacy, he in 1608 attended the packed assembly regarded by the presbyterians as unconstitutional, and from this time concurred in the measures sanctioned by the royal authority in behalf of episcopacy. When present at court in London in the latter year, he was sent by the king to the Tower to deal with Andrew Melville, but as he was unable to influence him the matter was left to Bishop Spotiswood (Calderwood, *History*, vi. 820). He was promoted to the bishopric of Galloway 31 July 1612, and was also made dean of the Chapel Royal. His character as delineated by Calderwood is by no means flattering, but the portrait is doubtless coloured by party prejudice. 'He was,' says Calderwood, 'a man filled with self-conceate, and impatient of anie contradiction, more vehement in the wrong course than ever he was fervent in the right, wherin he seemed to be fervent enough. He made his residence in the Canongate, neere to the Chapell Royall, whereof he was deane, and went sometimes but once in two years till his diocese. When he went he behaved himself verie imperiouslie' (*ib.* vii. 349). Spotiswood, on the other hand, was of opinion that he 'affected too much the applause of the people.' He died 16 Feb. 1619, and was interred in Greyfriars churchyard, Edinburgh. He had the chief part in the composition of the prayer-book completed in 1619, but never brought into use. His religious writings are much superior in style and in cast of thought to most of the similar publications of the time. In his lifetime were published: 'The Anatomy of a Christian Man,' 1611; 'Three Treatises concerning Christ,' 1612; 'The Holy Alphabet of Zion's Scholars; by way of Commentary on the cxix. Psalm,' 1613; 'Good News from Canaan; or an Exposition of David's Penitential Psalm after he had gone in unto Bathsheba,' 1613; 'A Mirror of Mercy; or the Prodigal's Conversion expounded,' 1614; 'Dikaiologie; containing a just defence of his former apology against David Hume,' 1614; 'Sermon on Titus ii. 7, 8,' 1616; 'Two Sermons on Psalm cxxi. 8, and Psalm lxxxviii. 17,' 1618. His 'Works,' among which was included 'A Commentary on the Revelations,' and to which was prefixed an account of his life, appeared in 1623, 2nd ed. 1629, 3rd 1726; and the 'Triumph of the Christian in three treatises' appeared in 1632.

[Life prefixed to his Works; Histories of Calderwood and Spotiswood; Thomas Murray's Literary History of Galloway, 86–101; M'Crie's Life of Andrew Melville; Keith's Catalogue of Scottish Bishops; Hew Scott's Fasti Eccles. Scot. ii. 614, 693.] T. F. H.

COWPER, WILLIAM (1666–1709), surgeon, was the youngest son of Richard Cowper of Petersfield in Sussex, where he was born in 1666. His name is sometimes spelt phonetically Cooper. From the evidence upon the trial of Spencer Cowper [q. v.], where he was called as a witness, it appears that he was not related to the chancellor's family. He was apprenticed to William Bignall, a London surgeon, on 22 March 1682, continued his apprenticeship under another surgeon, John Fletcher, was admitted a barber-surgeon on 9 March 1691, and began practice in London. In 1694 he published 'Myotomia Reformata; or, a New Administration of the Muscles of the Humane Bodies, wherein the true uses of the muscles are explained, the errors of former anatomists concerning them confuted, and several muscles not hitherto taken notice of described: to which are subjoined a graphical description of the bones and other anatomical observations,' London. To his copy of this work the author made manuscript additions and corrections, and prepared a short historical preface and a long introduction on muscular mechanics. Thirteen years after his death a new edition, with these additions, was published, at the charge of Dr. Mead, and edited by Dr. Jurin, Dr. Pemberton, and Mr. Joseph Tanner, a surgeon, with the altered title 'Myotomia Reformata; or, an Anatomical Treatise on the Muscles of the Human Body,' London, 1724. In 1696 Cowper was elected a fellow of the Royal Society, and in 1698 published at Oxford 'The Anatomy of Humane Bodies, with figures drawn after the life by some of the best masters in Europe, and curiously engraven in 114 copperplates. Illustrated with large explications containing many new anatomical discoveries and chirurgical observations. To which is added an introduction explaining the animal economy.' A second edition was published at Leyden in 1637. This work gave rise to a controversy with Dr. Bidloo, a Dutch professor, as to Cowper's use of plates taken from a book of Bidloo's on anatomy. Bidloo began by attacking Cowper in 'Gulielmus Cowper, criminis literarii citatus coram tribunali nobiliss. ampliss. societatis Britanno [*sic*] regiæ per Godefridum Bidloo,' Leyden, 1700

Dr. Hutton, physician to William III, had told Bidloo that Cowper was about to translate and plagiarise his work, whereupon Bidloo wrote an abrupt letter to Cowper in Latin, which received no answer; other letters to Cowper and to and from Dr. Hutton followed, and finally Bidloo accused Smith and Walford, the publishers, and Cowper himself of fraud in publishing the plates and of issuing a mere pirated compilation from Bidloo's anatomy. After several months Cowper wrote to Bidloo denying Bidloo's sole right to the plates, and repudiating the charge of borrowing a text which was, he said, erroneous, and which he had made his own by endless corrections and amplifications, nothing resembling Bidloo being left but a common basis of universally accepted anatomy. The whole correspondence is printed in Bidloo's tract with much abusive language, and a minute criticism of Cowper as an anatomist. Cowper is called a highwayman in English, lest the Latin term should not be clear enough, and is said to be a miserable anatomist who writes like a Dutch barber. In 1701 Cowper replied in 'Εὐχαριστία in qua dotes plurimæ et singulares Godefridi Bidloo M.D. et in illustrissima Leydarum Academia anatomiæ professoris celeberrimi, peritia anatomica, probitas, ingenium, elegantiæ latinitatis, lepores, candor, humanitas, ingenuitas, solertia, verecundia, humilitas, urbanitas, &c., celebrantur et ejusdem citationi humillime respondetur.' These figures, says Cowper, were drawn by Gerard de Luirens for Swammerdam, and Cowper's publisher had purchased impressions of them. Entirely fresh descriptions had been added, and the book was a new one and no piracy. Very little evidence is produced of these statements. The controversy has all the acerbity of its contemporary dispute on the epistles of Phalaris, and Cowper's title seems to have been suggested by parts of the index of Boyle against Bentley. An impartial perusal shows that Bidloo unjustly depreciates Cowper's work and has no ground for charging him with plagiarism as far as the descriptive anatomy is concerned. The origin of the work seems, however, to have been a request to Cowper from the English publishers to write letterpress to the Dutch plates, and though the plates may have been prepared for Swammerdam, it remains clear that some invasion of the rights of Bidloo and his Dutch publishers in the plates took place, and that Cowper connived at this invasion. The book shows an amount of learning acquired by dissection and of original observation beyond all plagiarism, and it took its place as the best English anatomy which had appeared. In 1702 Cowper published 'Glandularum quarundam nuper detectarum ductuumque earum excretionum descriptio cum figuris.' A pair of racemose glands, which are themselves situated beneath the anterior end of the membranous part of the urethra in the male, and whose ducts open into the bulbous part of the urethra, are described, and are to this day known by anatomists as Cowper's glands. There are some remarks by Cowper in Drake's 'Anthropologia' (London, 1717, i. 138), and he published several papers in the 'Philosophical Transactions,' of which the most interesting are: (No. 208) experiments with Colbatch's styptic, in which he shows the dangerous and ineffectual nature of the nostrum, and incidentally points out the differences between the vascular system of youth and that of age; (222) on the effects of a renal calculus lasting eight years in the kidney of a woman; (252) a case of union of a divided heel tendon in a carpenter after Cowper had united the edges by sutures; (285) on cases of empyema; (286) on the structure of the pulmonary vein; (310) anatomical and chirurgical observations (in this important paper he describes how he had demonstrated the junction of arterial and venous capillaries in a cat and in a dog); (299) in this paper he exactly describes degenerative disease of the aortic valves, and had clearly observed the pulse which accompanies such disease, a discovery often erroneously attributed to Corrigan in 1829, more justly claimed for Vieussens in 1715, but certainly first made by Cowper.

Cowper had a considerable surgical practice, and these papers prove that his attainments in pathology and comparative anatomy were as respectable as his knowledge of human anatomy and practical surgery.

In 1708 he suffered from difficulty of breathing, and during the winter became dropsical. He gave up work (Mead's *Preface*) and retired to his native place, where he died on 8 March 1709, and is buried in the parish church.

[Works; Manuscript Apprentice Register and Freemen's Register of Barbers' Company.]

N. M.

COWPER, WILLIAM, first Earl Cowper (*d.* 1723), first lord chancellor of Great Britain, grandson of Sir William Cowper, created a baronet for his royalist devotion 4 March 1642, was eldest son of Sir William Cowper, bart., a whig politician, who was concerned with Shaftesbury in indicting the Duke of York as a popish recusant in 1680, and who represented Hertford in parliament in 1679–81 and 1689–1700, and died in 1706. His mother was Sarah,

daughter of Sir Samuel Holled, a London merchant. The date and place of Cowper's birth are unknown. After spending some years at a private school in St. Albans, he entered the Middle Temple on 8 March 1681–1682. A circumstantial statement is made in the 'Biographia Britannica' (KIPPIS, iv. 389 note), to the effect that he seduced a certain Miss Elizabeth Culling of Hertingfordbury Park, Hertfordshire, and it is suggested that he did so by means of a sham marriage ceremony, and had two children by her. This story, which may have originated in mere local gossip, is probably the foundation of the novelette of 'Hernando and Louisa' in Mrs. Manley's 'Secret Memoirs from the New Atalantis' (1709), and of the charge of bigamy insinuated by Swift in the 'Examiner' (Nos. 17 and 22), and retailed as matter of common notoriety by Voltaire (*Dict. Phil.* art. 'Femme Polygamie'), with the substantial addition that Cowper was the author of a treatise in favour of polygamy. Shortly before his call to the bar, which took place on 25 May 1688, Cowper married Judith, daughter of Sir Robert Booth, a London merchant. He attached himself to the home circuit, and soon obtained considerable practice. On the landing of the Prince of Orange in November, he rode with a company of about thirty volunteers from London to Wallingford, near Oxford, where he joined the prince's forces, with which he returned to London. In 1694 he was appointed king's counsel, and about the same time recorder of Colchester. The following year, and again in 1698, he was returned to parliament as junior member for Hertford. The obituary notice in the 'Chronological Diary' states that 'the very first day he sat in the House of Commons he had occasion to speak three times, and came off with universal applause,' and Burnet (*Own Time*, orig. ed., ii. 426) observes, under date 1705, that 'he had for many years been considered as the man who spoke the best of any in the House of Commons.' In 1695–6 he played a subordinate part in the prosecution of the conspirators against the life of the king, and of the nonjuring clergymen who gave them absolution on the scaffold. In the same year he was also engaged in a piracy case, and in the prosecution of Captain Vaughan for levying war against the king on the high seas, and took an active part in the parliamentary proceedings which issued in the attainder of Sir John Fenwick, speaking more than once, and giving his reasons for voting in favour of that judicial murder at considerable length. He was appointed king's counsel 8 March 1698–9. In 1699 he appeared for the prosecution at the trial of Lord Mohun for the murder of Richard Coote, killed in an affair of honour by the Earl of Warwick, and in a forgery case, and in the following year he successfully resisted an application for a new trial of his brother, Spencer Cowper [q. v.] In 1700–1 he was returned to parliament as junior member for Beeralston in Devonshire. He spoke against the motion for the impeachment of Lord Somers in 1701. On the accession of Anne in the following year his patent of counsel to the crown was renewed. In 1704 the celebrated case of Ashby *v.* White, in which an elector sued the returning officer for the borough of Aylesbury for damages for having refused to receive his vote at the general election of 1700, occasioned a serious conflict between the two houses of parliament. The House of Peers having overruled a judgment of the queen's bench to the effect that no such action lay, the matter was forthwith made a question of privilege by the House of Commons. Cowper argued elaborately but unsuccessfully that the jurisdiction of the house did not extend to the restraining of the action, but as he admitted that the house was the sole judge of the validity of election returns, and of the right of the elector to vote, it is difficult to understand his position. In the summer of this year (1704) an information was laid by the attorney-general, by order of the House of Commons, against Lord Halifax for neglecting, as auditor of the exchequer, to transmit the imprest rolls half-yearly to the king's remembrancer, pursuant to the statute 8 & 9 Will. III, c. 28, s. 8, and Cowper was one of the counsel retained for the defence.

The prosecution broke down owing to a piece of bad Latin in the information. The house (18 Nov.) censured Cowper for the part he had taken in the matter. On 11 Oct. 1705 he succeeded Sir Nathan Wright as lord keeper, the appointment being, in part at least, due to the influence of the Duchess of Marlborough. He would not, however, accept office except upon the understanding that he should have 2,000*l.* equipage money, a salary of 4,000*l.*, and be raised to the peerage at the next promotion. Evelyn's statement that he bargained for a pension of 2,000*l.* per annum on dismissal is not confirmed by Cowper's 'Diary.' He was sworn of the privy council the same day, and took his seat on the woolsack on the 25th. His first public act of importance was to announce his intention of declining the new year's gifts which his predecessors had been in the habit of receiving from the officials attached to and the counsel practising in the court of chancery. Not being taken at his word, he refused admittance to all such as presented them-

selves with the usual offerings on new year's day. His example was not followed by the chiefs of the other courts, and he suffered a certain loss of popularity with them. He was placed on the commission for the treaty of union on 10 April 1706, and opened the negotiations at the Cockpit on the 16th. The Scotch commissioners sat apart from the English, the interchange of views being effected by writing, the lord keeper and the lord chancellor of Scotland acting as intermediaries. Hence Cowper figures more prominently in the history of the negotiations than any other English commissioner. As, however, the deliberations on either side were kept strictly secret, it is impossible to say how far his influence extended in the shaping of the treaty, which Burnet attributes mainly to Lord Somers. On 23 July Cowper delivered to the queen a draft of the treaty, which, with slight alterations, was subsequently ratified by both parliaments. His first wife had died before he received the seal. In September 1706 he married Mary, daughter of John Clavering of Chopwell, in the bishopric of Durham, the marriage, however, being kept secret until 25 Feb. 1706–7. On 9 Nov. 1706 he was raised to the peerage by the title of Baron Cowper of Wingham in Kent. His first reported utterance in the House of Lords is a brief but extremely graceful speech (entered in the *Journal* 5 Dec. 1706), in which he conveys to the Duke of Marlborough the thanks of the house for the victory of Ramillies. On 4 May 1707, the Act of Union having come into operation on the first of the month, he was declared by the queen in council lord high chancellor of Great Britain. The intrigues of the Duke of Marlborough in 1709 to obtain the appointment of commander-in-chief for life met with determined opposition from Cowper, who declared that he would never put the seal to the commission. In 1710 Cowper presided at the trial of Dr. Sacheverell in Westminster Hall. The proceedings began on 27 Feb. and occupied three weeks. The lord chief justice and chief baron and ten puisne judges were unanimous in holding that the omission to specify passages on which the charge was based invalidated the proceedings. Cowper abstained from any public expression either of assent or dissent, and on the strength of an old precedent in the reign of Charles I, it was held immaterial. Cowper voted for Sacheverell's condemnation. The excitement caused by the trial led to the defeat of the whigs in the autumn, and the expulsion of their leaders from the cabinet. Harley was anxious that Cowper should continue in office, and repeatedly pressed him to do so, and the queen would hardly accept his surrender of the seal. He resigned, however, on 23 Sept. Cowper now devoted himself with energy to the business of opposition. St. John having attacked the late ministry in a letter to the 'Examiner,' he replied by a long letter in the 'Tatler,' a somewhat ponderous affair, in which he denounces 'the black hypocrisy and prevarication, the servile prostitution of all English principles, and malevolent ambition' characteristic of the other party. Both letters are printed in the 'Somers Tracts' (ed. Scott), xiii. 71–85. In the debate of 11 and 12 Jan. 1711 on the conduct of the war in Spain, in which the late ministry were accused of having left the Earl of Peterborough without adequate means to prosecute the war with vigour, Cowper took a leading part, though it is impossible to gather from the report how far his defence was effective. The vote of censure was carried by a substantial majority. In the debate on the address (7 Dec. 1711) he supported the Earl of Nottingham's amendment that a clause should be inserted to the effect 'that no peace could be safe or honourable to Great Britain or Europe if Spain and the West Indies were allotted to any branch of the house of Bourbon.' In the debate on the negotiations for peace in June 1712, the Earl of Strafford insinuating that the backwardness of the Dutch was due to the intrigues of the Duke of Marlborough, Cowper replied with much animation that 'according to our laws it could never be suggested as a crime in the meanest subject, much less in a member of that august assembly, to hold correspondence with our allies.' This deliverance appears to have been effective at the time, but it cannot be regarded as enunciating a sound principle of constitutional law. A motion was made (17 March 1714) 'for an account of the instances which had been made for restoring to the Catalans their ancient privileges and the letters relating thereto.' This, as also a further motion on the same subject on the 31st, received Cowper's support. He spoke in favour of the Earl of Wharton's motion that a reward should be proclaimed for the apprehension of the Pretender, dead or alive (8 April 1714), and led the opposition to the second reading of the bill for suppressing schools kept by dissenters (June), but was beaten, and attempted, without success, to amend it in committee. At this time he was much courted by Harley, now earl of Oxford. On the death of the queen Cowper was appointed by the elector of Hanover one of 'the lords justices' in whom, by the statute 6 Anne, c. 41, ss. 10, 11, and 12, the supreme power was vested during the interregnum.

Almost the first act of the lords justices was to give a broad hint to Bolingbroke by appointing Addison their secretary and directing the postmaster-general to forward to him all letters addressed to the secretary of state. This not sufficing, they (3 Aug.) dismissed Bolingbroke from his office by the summary process of taking the seal from him, turning him out, and locking the doors. On 21 Sept. Cowper was reappointed lord chancellor of Great Britain at St. James's, taking the oath the next day, and on 23 Oct. he went in state to Westminster Hall and again took the oath there. While still lord justice he had composed for the benefit of the new king a brief political tract which he entitled 'An impartial History of Parties,' and of which a French translation by Lady Cowper was presented to the Hanoverian minister, Count Bernstorff (24 Oct. 1714), and by him laid before the king. In this memoir he traces the history of the whig and tory parties from their origin to the date of writing, defines their respective principles as dispassionately as could reasonably be expected, and with great clearness and condensation describes the existing posture of affairs and suggests the propriety of avoiding coalition cabinets while admitting the opposition to a fair share in the subordinate places. The history was first printed by Lord Campbell as an appendix to his life of Cowper in the fourth volume of his 'Lives of the Chancellors.' Trevor, the lord chief justice of the king's bench, one of the twelve peers created in 1712, was, by Cowper's advice, removed from his office, being succeeded by Sir Peter King. Certain minor changes in the constitution of the judicial bench were also made. On 21 March 1715 he read the king's speech, and on the following day he took part in the debate raised by Trevor and Bolingbroke on the lords' address. Exception being taken to an expression of confidence that the king would 'recover the reputation of this kingdom in foreign parts,' Cowper replied by drawing a distinction between the queen and her ministry, and the address was carried by sixty-six to thirty-three. He spoke in the debate on the articles of impeachment exhibited against the Earl of Oxford on 9 July 1715, arguing against Trevor that they were sufficient to ground a charge of high treason. On the outbreak of the rebellion of 1715 Cowper exerted himself to infuse some of his own spirit into the king and his colleagues on the bench. Probably it was at his suggestion that the Riot Act, which had not been in force since the reign of Elizabeth, was in that year re-enacted, strengthened, and made perpetual. Cowper presided as high-steward at the trial of Lord Winton, the only one of the rebel lords who did not plead guilty, in March 1716. Winton's complicity in the rebellion was clearly proved, but he made persistent efforts to obtain an adjournment on the alleged ground that he had not had time to bring up his most important witnesses, deprecating with some wit being subjected to 'Cowper law as we used to say in our country, hang a man first and then judge him,' a play upon the common Scotch expression 'Cupar law' and the name of the lord chancellor. He was found guilty and sentenced to death. In the debate on the Septennial Bill (10 April) Cowper spoke at length, reviewing the history of the Triennial Act, and giving an unqualified support to the measure. Cowper made what appears to have been a powerful speech in favour of the Mutiny Bill, which proposed to establish a standing army of sixteen thousand men, and was violently opposed by Oxford in February 1718. On 18 March he was created Viscount Fordwiche and Earl Cowper in the peerage of Great Britain. On 15 April he resigned office, the ostensible reason being failing health. The true cause is probably to be sought either in intrigues in the royal household or in the jealousy of other members of the cabinet, combined with the opposition which he had offered in the preceding January to a projected bill for providing the king with an annuity of 100,000*l.*, with an absolute discretion to assign such portion thereof as he might think proper to the maintenance of the Prince of Wales. Cowper was a small patron of literature. He had been the correspondent and host of the poet, John Hughes, and in November 1717 appointed him secretary to the commission for appointing justices of the peace, and on his resignation he wrote to his successor, Lord Parker, begging him to continue Hughes in that office, a request with which Parker complied. This elicited a brief ode in honour of Cowper from the grateful poet (*Works*, ii. ode xx.) Cowper voted with the tories in the successful opposition which they offered to the repeal of the 'act for preserving the protestant religion' (10 Anne c. 6, which imposed disabilities on papists), and the more obnoxious clauses of the Test and Corporation Acts, proposed by Lord Stanhope in December 1718. He opposed the Peerage Bill, which proposed to fix a numerical limit to the house of peers, on its introduction in February 1719. The bill was dropped owing to the excitement which it created in the country, but was reintroduced in November, when Cowper again opposed it. Having passed the House of Lords with celerity, it was thrown out by the commons. Cowper also opposed the bill for enabling the South Sea Company to increase their capital.

The bill, however, passed the house of peers without a division (7 April 1720). A question addressed by Cowper to the ministry concerning an absconding cashier of the South Sea Company on 23 Jan. 1721 appears to be the earliest recorded instance of a public interpellation of ministers. On 13 Dec. he moved the repeal of certain clauses of the Quarantine Act; on 11 Jan. 1722 he called attention to 'the pernicious practice of building ships of force for the French,' and moved that the judges should be ordered to introduce a bill to put an end to it. On 3 Feb., the lord chancellor being two hours late and the lord chief justice, who was commissioned to take his place on the woolsack in his absence, not being present, Cowper moved that the house proceed to elect a speaker ad interim. The lord chancellor then arriving excused himself on the ground that he had been detained by the king in council at St. James's. This excuse the lords refused to accept, and entered a lengthy protest in the journal of the house (signed by Cowper) in which they affirmed that the house was 'the greatest council in the kingdom, to which all other councils ought to give way.' On 26 Oct. Cowper opposed the committal of the Duke of Norfolk to the Tower on suspicion of treason. An assertion by the Jacobite conspirator Layer, in the course of his examination before a committee of the House of Commons in January and February 1723, that he had been informed that Cowper was a member of a club of disaffected persons known as Burford's Club, elicited from Cowper a public declaration of the entire groundlessness of the charge. The bill of pains and penalties against Atterbury was earnestly opposed by Cowper, who closed the debate with a solemn protest against the exercise of judicial powers by parliament without the formal proceeding by impeachment (15 May 1723). He also opposed Walpole's bill for 'laying a tax upon papists' (20 May). On 5 Oct. 1723 he took a severe cold while travelling from London to his seat in Hertfordshire, of which he died five days later. He was buried in Hertingfordbury church. Ambrose Philips celebrated his virtues in an ode styled by courtesy 'Pindaric' (Chalmers, *English Poets*, xiii. 121). The Duke of Wharton in the 'True Briton' (No. 40) magnified his genius and extolled his virtue in terms of the most extravagant eulogy. Pope (*Imitations of Horace*, epist. ii. bk. ii.) and Lord Chesterfield agree in describing him as a consummate orator. His person was handsome, his voice melodious, his elocution perfect, his style pure and nervous, his manner engaging. On the other hand, in logical faculty and grasp of legal science he was deficient. Steele dedicated the third volume of the 'Tatler' to him, and an enthusiastic panegyric upon him under the name of 'Manilius,' written by his humble friend Hughes at the time when there was least to expect from his patronage (1712), fills one number of the 'Spectator' (No. 467). He was F.R.S., governor of the Charterhouse, and lord-lieutenant of Herefordshire 1700–2 and 1714–22. By his first wife he had one son only, who died in boyhood; by his second wife he had two sons (William, who succeeded to the title, and Spencer [q. v.], who took holy orders and became dean of Durham) and two daughters. Two of his speeches in passing sentence on the rebel lords were printed in pamphlet form in 1715 (*Brit. Mus. Cat.*), and a few of his letters will be found in 'Letters by several Eminent Persons,' London, 1772, 8vo (*Brit. Mus. Cat.*), and in the 'Correspondence of John Hughes,' Dublin, 1773, 12mo (*Brit. Mus. Cat.*), others in Addit. MSS. 20103, ff. 7–33, and 22221, f. 256.

[Cowper's Private Diary (printed in 1833 and presented to the Roxburghe Club by Ed. Craven Hawtrey) covers the period from 1705 to 1714; it consists chiefly of brief minutes of cabinet councils and jottings of private conversations with politicians; it becomes very slight and fragmentary after his surrender of the seal. Lady Cowper's Diary (edited by the Hon. Spencer Cowper, London, 1864, 8vo) begins where her husband's leaves off, but is only continuous for two years [see Cowper, Mary, 1685–1724]. Other sources of information are: the obituary notice in the Chronological Diary, appended to the Historical Register for the year 1723; Berry's County Genealogies (Hertfordshire), p. 168; Clarke's Life of James II, ii. 590; Rapin (Tindall), 2nd edit. ii. 713; Lists of Members of Parl. (Official Return of), i. 542, 547, 559, 566, 574, 581, 586 594, 600, ii. 2; Clutterbuck's Hertfordshire, ii. 192; Burnet's Own Time (Oxford ed.), iv. 480 note, v. 220, 248, 299, vi. 11 note, 31 note, 76 note; Additional Annotations, p. 145; Howell's State Trials, xii. 1446–7, xiii. 123, 199, 219, 246, 272, 274, 422, 465, 471, 494–5, 498–9, 501–2, 504–5, 509–12, 515, 521, 555, 623, 742–44, 1035, 1055, 1091, 1198, xv. 466–7, 847, 893, 1046–1195; Luttrell's Relation of State Affairs, iv. v. vi.; Parl. COWPER, WILLIAM, M.D. (1701–1767), antiquary, was the third son of the Rev. John Cowper, M.A., of Overlegh, Cheshire, by Catherine, daughter of William Sherwin, beadle of divinity and bailiff of the university of Oxford. He was baptised at St. Peter's, Chester, on 29 July 1701, was admitted a student at Leyden on 27 Oct. 1719, and probably took his doctor's degree in that university. For many years he practised as a physician at Chester with great reputation. In 1745 he was elected mayor of Chester. He died at Overlegh on 20 Oct. 1767, and was buried at St. Peter's, Chester. He married in 1722 Elizabeth, daughter of John Lonsdale of High Ryley, Lancashire, but had no issue.

Cowper, who was a fellow of the Society of Antiquaries, published anonymously 'A Summary of the Life of St. Werburgh, with an historical account of the images upon her shrine (now the episcopal throne) in the choir of Chester. Collected from antient chronicles and old writers, by a Citizen of Chester,' Chester, 1749, 4to. This work is said to have been stolen from the manuscripts of Mr. Stone. He was also the author of 'Il Penseroso: an evening's contemplation in St. John's churchyard, Chester. A rhapsody, written more than twenty years ago, and now (first) published, illustrated with notes historical and explanatory,' London, 1767, 4to, addressed, under the name of M. Meanwell, to the Rev. John Allen, M.A., senior fellow of Trinity College, Cambridge, and rector of Tarporley, Cheshire. In this work Cowper takes a view of some of the most remarkable places around Chester distinguished by memorable personages and events. He was an intelligent antiquary and preserved many valuable manuscript collections of Williamson and others which would otherwise have perished. He also left several works of his own compilation relative to the ancient history of Cheshire and Chester. These manuscripts, which are frequently quoted by Ormerod, the Cheshire historian, are preserved in the family archives at Overlegh. They consist of various small volumes, most of the contents of which are fairly transcribed into two larger ones, containing memoirs of the earls of the palatinate and the bishops and dignitaries of the cathedral, lists of city and county officers, and a local chronology of events. In his Broxton MSS. he takes Webb's 'Itinerary' as the text of each township, adds an account of it transcribed from Williamson's 'Villare,' and continues the descent of property to his own time. He also wrote a small manuscript volume, entitled 'Parentalia,' containing memoirs of the Cowper family, and the account of the siege of Chester, which is printed in Ormerod's 'Cheshire,' i. 203 seq. This description of the siege had been printed twice previously at Chester (in 1790 and 1793), but with considerable alterations.

[Nichols's Lit. Anecd. v. 316; Gough's British Topography, i. 249, 253, 264; Ormerod's Cheshire, i. 293, 294; Peacock's Leyden Students, p. 24; Gower's Sketch of Materials for a Hist. of Cheshire, 61, 90; Notes and Queries, 5th ser., x. 388.] T. C.

COWPER, WILLIAM (1731–1800), poet, was born at his father's rectory of Great Berkhampstead 15 Nov. 1731. His father, John Cowper, D.D., was second son of Spencer Cowper, the judge [q. v.] His mother was Anne, daughter of Roger Donne of Ludham Hall, Norfolk. She left two surviving children, William and John, dying in childbed on John's birth in 1737. On her death Cowper was sent to the school of a Dr. Pitman at Market Street, Hertfordshire. He was cruelly treated by a fellow-pupil till a discovery led to the expulsion of the tormentor and his own removal from the school, after a stay of two years. A weakness of sight led to his being now placed for two years with an oculist. Specks which had appeared upon his eyes were finally removed, he says, by a severe attack of small-pox at the age of fourteen. Some weakness of sight remained through life. When ten years old he was sent to Westminster School, where he was 'contemporary of Churchill, Colman, and Lloyd, and lodged in the same house with Cumberland.' Sir William Russell (drowned when still young) was his closest friend, and he says that he had a 'particular value' for Warren Hastings (to Lady Hesketh, 16 Feb. 1788), to whom he addressed some lines on the impeachment. Cowper's 'Tirocinium' (1784) proves that he formed a low opinion of English public schools. The severity of his judgment upon institutions where religious instruction was scanty and temptations to vice abounded is explicable without supposing that he was himself unhappy. He says that he became 'an adept in the infernal art of lying,' that is, of inventing excuses to his masters. He shows, however, some pleasure in recalling his schooldays. He imagines himself receiving a 'silver groat' for a good exercise, and seeing it passed round the school (Southey, v. 356). Another letter states that he 'excelled at cricket and football' (*ib.* iv. 102). Here he wrote his first published poem; he became a good writer of Latin verses; he acquired an interest in literature, and a youthful veneration for literary distinction (*ib.* iv. 44–51, 73).

Cowper left Westminster at eighteen, and after nine months at home was articled for three years to a solicitor named Chapman, with whom he lodged. He spent much time at the house of his uncle, Ashley Cowper, in Southampton Row [for Cowper's relations see under COWPER, SPENCER, 1669–1727]. He introduced a fellow-clerk, Thurlow, afterwards the chancellor, to his uncle's family, and Thurlow and Cowper spent their time in 'giggling and making giggle' with the three daughters, instead of 'studying the law' (SOUTHEY, v. 301). Thurlow, however, found time for serious work. Some years later (in 1762) (*ib.* i. 411) he made a playful promise that when he became lord chancellor he would provide for his idle fellow-pupil. Cowper had been entered at the Middle Temple, 29 April 1748; he took chambers in the inn upon leaving Chapman's office in 1752, and was called to the bar on 14 June 1754. He was seized with an ominous depression of spirits during the early part of his residence in chambers. He found some consolation in reading George Herbert's poems, but laid them aside on the advice of a relation, who thought that they stimulated his morbid feelings. After a year's misery he sought relief in religious exercises. He was advised to make a visit of some months to Southampton, where he made yachting excursions with Sir Thomas Hesketh. One day he felt a sudden relief. Hereupon he burnt the prayers which he had composed, and long afterwards reproached himself with having misinterpreted a providential acceptance of his petitions into a mere effect of the change of air and scene. Cowper's father died in 1756. Three years afterwards Cowper bought a set of chambers in the Inner Temple and was made a commissioner of bankrupts. An unfortunate love affair with his cousin Theodora had occupied him about 1755 and 1756. She returned his affection, but her father forbade the match on the ground of their relationship, and possibly from some observation of Cowper's morbid state of mind. Lady Hesketh told Hayley (14 Oct. 1801) that the objection was the want of income on both sides; but at the time Cowper's prospects were apparently good enough. The pair never met after two or three years' intercourse. Theodora never married; she continued to love Cowper, and carefully preserved the poems which he addressed to her. She fell into a morbid state of mind, but lived to give some information through Lady Hesketh to Hayley for his 'Life of Cowper.' Theodora died 22 Oct. 1824, and the poems which she had preserved were published in 1825.

Cowper apparently was less affected.. He continued the life of a young Templar who preferred literature to law. He belonged to the Nonsense Club, composed of seven Westminster men, who dined together weekly. It included Bonnell Thornton, Colman, Lloyd, and Joseph Hill, the last of whom was a lifelong friend and correspondent. Thornton and Colman started the 'Connoisseur' in 1754, and to this Cowper contributed a few papers in 1756. He contributed to Duncombe's 'Translations from Horace,' 1756–1757; he also contributed to the 'St. James's Chronicle' (1761), of which Colman and Thornton were part proprietors. Cowper does not appear to have been intimate with Churchill, whose first success was made in 1761; but he always admired his old schoolfellow. At the Temple, Cowper and a Mr. Rowley read Homer, comparing Pope's translation with the original, much to Pope's disadvantage (Letter to Clotworthy Rowley, 21 Feb. 1788). He helped his brother in a translation of the 'Henriade,' supplying two books himself. Meanwhile his fortune was slipping away. He had reason to expect patronage from his relations. His cousin, Major Cowper, claimed the right of appointment to the joint offices of 'reading clerk and clerk of the committees,' and to the less valuable office of 'clerk of the journals of the House of Lords.' Both appointments became vacant in 1763, the latter by the death of the incumbent, which Cowper reproached himself for having desired. Major Cowper offered the most valuable to Cowper, intending the other for a Mr. Arnold. Cowper accepted, but was so overcome by subsequent reflections upon his own incapacity that he persuaded his cousin to give the more valuable place to Arnold and the less valuable to himself. Meanwhile the right of appointment was disputed. Cowper was told that the ground would have 'to be fought by inches,' and that he would have to stand an examination into his own fitness at the bar of the House of Lords. He made some attempts to secure the necessary experience of his duties by attending the office; but the anxiety threw him into a nervous fever. A visit to Margate in the summer did something for his spirits. On returning to town in October he resumed attendance at the office. The anticipated examination unnerved him. An accidental talk directed his thoughts to suicide. He bought a bottle of laudanum; but after several attempts to drink it, frustrated by accident or sudden revulsion of feeling, he threw it out of the window. He went to the river to drown himself, and turned back at sight of a porter waiting on the bank. The day before that fixed for his examination he made

a determined attempt to hang himself with a garter. On a third attempt the garter broke just in time to save his life. He now sent for Major Cowper, who saw at once that all thoughts of the appointment must be abandoned. Cowper remained in his chambers, where the symptoms of a violent attack of madness rapidly developed themselves. Cowper's delusions took a religious colouring. He was convinced that he was damned. He consulted Martin Madan, his cousin [see under COWPER, SPENCER]. Madan gave him spiritual advice. His brother came to see him, and was present during a crisis, in which he felt as though a violent blow had struck his brain 'without touching the skull.' The brother consulted the family, and Cowper was taken in December 1763 to a private madhouse, kept by Dr. Nathaniel Cotton [q. v.] at St. Albans. A copy of sapphics written in the interval gives a terrible description of his state of mind. Cowper's religious terrors were obviously the effect and not the cause of the madness, of which his earlier attack had been symptomatic. Cotton treated him with great tenderness and skill. He was himself a small poet (his works are in Anderson's and Chalmers's collections), and he sympathised with Cowper's religious sentiments. When after five months of terrible agonies Cowper became milder, Cotton's conversation was soothing and sympathetic. Cowper stayed with him a year longer, and then, being deeply in debt to Cotton, asked his brother, now a resident fellow of Corpus Christi College, Cambridge, to find him lodgings near Cambridge. He resigned his commissionership of bankruptcy (worth about 60*l.* a year), feeling that his ignorance of the law made it wrong to take the oath, and desiring to sever himself entirely from London. His family subscribed to a small annual allowance; his chambers in the Temple were let, and he had some stock, some of which he was soon reduced to sell. He inherited 300*l.* or 400*l.* from his brother in 1770, and his will, made in 1777, shows that he had then about 300*l.* in the funds. He removed from St. Albans 17 June 1765, and, after visiting Cambridge, went to Huntingdon (22 June) to lodgings secured by his brother. He renewed a correspondence with his cousin, Lady Hesketh, and his friend, Joseph Hill. He rode halfway to Cambridge every week to meet his brother, and cared little for society. All other friendships 'were wrecked in the storm of sixty-three' (to Joseph Hill, 25 Sept. 1770). Hill continued to manage Cowper's money matters with unfailing kindness. Thurlow, on becoming chancellor in 1778, appointed Hill his secretary. Cowper became attached to Huntingdon, then a town of under two thousand inhabitants. By September he had made acquaintance with the Unwins. Morley Unwin, the father, held the living of Grimston, Norfolk (in the patronage of Queens' College, Cambridge), but lived at Huntingdon, where he had been master of the free school, and took pupils. His wife, Mary Cawthorne (*b.* 1724), was daughter of a draper at Ely. They had two children, William Cawthorne and a daughter. William, born in 1744 or 1745, was now at Christ's College, Cambridge, where he graduated as 'senior optime' and second chancellor's medallist in 1764. The daughter was a year or two younger. Cowper was spending more than his income, and on 11 Nov. 1765 became a boarder in the Unwin family, from motives both of economy and of friendship. His family, especially Colonel Spencer Cowper, brother of Major Cowper, had made some complaints of his extravagance. He had engaged the services of a boy from Dr. Cotton out of charity, and his relations thought that he should not be liberal on other people's money. An anonymous letter (no doubt from Lady Hesketh or her sister) assured him that if the colonel withdrew his contribution (which he did not) the deduction should be made up (to Lady Hesketh, 2 Jan. 1786). Mrs. Unwin soon afterwards offered to reduce her charges for board (from eighty guineas) by one half. Cowper was often cramped for money, but seems never to have worried himself greatly upon that score. He had apparently cared little for religion before his illness. He now became intensely devout. A great part of his day with the Unwins was spent in attending divine service (which was performed twice a day), singing hymns, family prayers, and religious reading and conversation. He corresponded with Mrs. Cowper, wife of Major Cowper, who, with her brother, Madan, sympathised with his religious sentiments. He gave her the history of his conversion (to Mrs. Cowper, 20 Oct. 1766), and told her that he had had thoughts of taking orders. His correspondence with Lady Hesketh ceased after 30 Jan. 1767, apparently because she was not sufficiently in sympathy upon these points.

On 2 July 1767 the elder Unwin died in consequence of a fall from his horse on 28 June. It was immediately settled that Cowper should continue to reside with Mrs. Unwin, whose behaviour to him had been that 'of a mother to a son' (to Mrs. Cowper, 13 July, 1767). Just at this time Dr. Conyers, a friend of the younger Unwin, had mentioned the mother to John Newton, who after commanding a slaveship had taken orders, and become a conspicuous member of that section of the church

which was beginning to be called evangelical. He was now curate of Olney, Buckinghamshire. The vicar, Moses Browne, was non-resident, and Newton's income was only about 70*l.* a year. John Thornton, famous for his liberality, and the father of a better known Henry Thornton, allowed him 200*l.* a year for charity, and Newton worked energetically. At Olney he found a house called 'Orchard Side' for Cowper and Mrs. Unwin. Newton employed Cowper as a kind of lay-curate in his parish work. Cowper took part in prayer meetings, visited the sick and dying, and attended constant services. The strain upon his nerves was great (see *Early Productions of Cowper*, 68–70, for Lady Hesketh's view); his correspondence declined, and he became absorbed in his voluntary duties. He did his best to help a poor population, and was much respected at Olney, where he was called the 'Squire,' or 'Sir Cowper.' On 20 March 1770 his brother died at Cambridge. Cowper was with him for a month previously, giving religious advice. He wrote an account of his brother's conversion in a pamphlet called 'Adelphi,' published in 1802 by Newton from the original manuscript. Cowper was now composing hymns at Newton's request, both for edification and to commemorate their friendship. William Unwin, the son, had settled as a clergyman at Stock in Essex. His sister in 1774 married Matthew Powley, a friend of Newton's, who had been in trouble at Oxford for methodism, and appointed by Henry Venn to the curacy of Slaithwaite, Huddersfield. Powley became vicar of Dewsbury, and died in 1806. Mrs. Powley died 9 Nov. 1835, aged eighty-nine. She had a devotion to a Mr. Kilvington, resembling her mother's to Cowper (Southey, vii. 276–90). It is now known, although Southey denied the fact, that Cowper was at this time engaged to marry Mrs. Unwin (*John Newton*, by Josiah Bull, p. 192). The engagement was broken off by a fresh attack of mania, possibly stimulated by the exciting occupations encouraged by Newton. In January 1773 the case was unmistakable. In March Cowper was persuaded with difficulty to stay for a night at Newton's house, and then could not be persuaded to leave for more than a year. When feeling the approach of this attack, Cowper composed his fine hymn, 'God moves in a mysterious way' (Greathead, *Funeral Sermon*, p. 19). In the following October suicidal tendencies again showed themselves. He thought himself bound to imitate Abraham's sacrifice of Isaac, taking himself as the victim, and that for his failure to do this he was doomed to eternal perdition. This last illusion seems henceforth never to have been quite eradicated from his mind. It was not till May 1774 that he showed improvement, and Mrs. Unwin was then able to induce him to return to his own house. Newton's kindness was unfailing, however injudicious may have been some of his modes of guidance. It was at this time that Cowper sought relief in keeping the hares whom he has immortalised. It was not till 12 Nov. 1776 that he broke silence by answering a letter from Hill.

At the end of 1779 Newton was presented by Mr. Thornton to the rectory of St. Mary Woolnoth. He had failed to attract the people of Olney, and had a name, as he says (Southey, *Cowper*, i. 270), for 'preaching people mad.' He adds some facts which tend to justify the reputation. The influence of Newton upon Cowper has been differently estimated by biographers according to their religious prepossessions. Facts are wanting to enable us to say positively whether Cowper's mind was healthily occupied or overwrought under Newton's direction. The friendship was durable. Newton, if stern, was a man of sense and feeling. It seems probable, however, that he was insufficiently alive to the danger of exciting Cowper's weak nerves. In later years Cowper's letters, though often playful, laid bare to Newton alone the gloomy despair which he concealed from other correspondents. Newton was, in fact, his spiritual director, and Cowper stood in some awe of him, though it does not seem fair to argue that the gloom was caused by Newton, because revealed to him. Before leaving Newton published the Olney hymns. He recommended Cowper to William Bull (1738–1814) [q. v.], an independent minister, an amiable and cultivated man. A cordial affection soon sprang up between them.

After his recovery Cowper had found recreation in gardening, sketching, and composing some playful poems. He built the little summer-house which has been carefully preserved. Mrs. Unwin now encouraged him to a more prolonged literary effort. In the winter of 1780–1 he wrote the 'Progress of Error,' 'Truth,' 'Table Talk,' and 'Expostulation.' Newton found a publisher, Joseph Johnson of St. Paul's Churchyard, who undertook the risk. Both Newton and Johnson suggested emendations, which the poet accepted with good-natured submission. Newton also prepared a preface at Cowper's request, which was afterwards suppressed at the suggestion of the publisher, as likely to frighten readers of a different school. It was, however, prefixed, at Newton's request, in an edition of Cowper's poems in 1793. Publication was delayed, and Cowper continued to

add other poems during 1781. In the same year he published anonymously a poem, called 'Anti-Thelyphthora,' an attack, strangely coarse for Cowper, upon 'Thelyphthora,' a defence of polygamy published by his cousin Madan in 1780, which had caused a brisk controversy and no little annoyance to Cowper and his friends. Cowper allowed this production to sink into oblivion. Lady Hesketh and Hayley admired it, but thought it right to forbid the republication (*Add. MS.* 30803 A). It was added to his works by Southey, who accidentally discovered it. The volume of 'Poems by William Cowper, of the Inner Temple, Esq.,' appeared in February 1782. Besides eight longer poems, there were short pieces, including an address to Thurlow on his promotion. He had declined to apply to Thurlow, but evidently hoped for some fulfilment of the early promise. To Thurlow Cowper now sent a copy, with a respectful and formal letter. Thurlow took no notice of this, nor did Colman, to whom a copy was also sent. Cowper revenged himself by sending to Unwin an indignant 'Valediction,' complaining of the infidelity of his friends (for a similar incident in regard to Thurlow, see CRABBE, GEORGE). Both Colman and Thurlow had some friendly intercourse with him on occasion of his translation of Homer. The volume was condemned as 'a dull sermon in very indifferent verse' by the 'Critical Review,' but judiciously praised by the 'Monthly.' A warm letter of praise came from Benjamin Franklin, then in France. Cowper was sensitive, but seems to have taken the modest success of his volume philosophically. The 'Critical Review,' however unappreciative, had indicated the probable feeling of the general public. The poems are, for the most part, the satire of a religious recluse upon a society chiefly known by report or distant memory. His denunciations of the 'luxury' so often lamented by contemporaries is coloured by his theological views of the corruption of human nature. Some verses against popery in 'Expostulation' were suppressed as the volume went through the press, not, as Southey thinks, in deference to the catholic Throckmortons, with whom he only became intimate in 1784, but on consultation with Newton. The acuter critics alone perceived the frequent force of his writing, his quiet humour, and his fine touches of criticism. In the attack upon Pope's smoothness and the admiration of Churchill's rough vigour (see 'Table Talk') was contained the first clear manifesto of the literary revolution afterwards led by Wordsworth. Cowper had now discovered his powers, but had still to learn the best mode of applying them. In 1781 he made the acquaintance of Lady Austen. Her maiden name was Ann Richardson, and she was now the widow of Sir Robert Austen, a baronet, to whom she had been married early, and who had died in France. She had met Cowper (July 1781) when visiting her sister, Mrs. Jones, wife of a clergyman at Clifton, near Olney. She was a lively, impressionable woman, and 'fell in love' at once with Cowper and Mrs. Unwin. Cowper soon called her 'Sister Ann,' and sent her a poetical epistle when she returned to town in October. A correspondence followed which led to a temporary breach in the winter of 1781–2, in consequence of an admonition addressed to her by Cowper, with Mrs. Unwin's consent, warning her against an excessive estimate of their own merits. The little tiff blew over. Lady Austen returned to the neighbourhood in the spring of 1782, and at once brought about a reconciliation. She took part of the vicarage, whence a passage between the gardens, opened in Newton's time, was again made available (SOUTHEY, ii. 60, 61). The two ladies and Cowper dined alternately with each other. Cowper's spirits were reviving amidst congenial society and renewed literary interest. Lady Austen urged him to try blank verse, and on his complaining of the want of a subject, replied, 'You can write upon any subject; write upon this sofa.' The result was the 'Task,' begun early in the summer of 1783, and 'ended, but not finished,' by August. Lady Austen about the same time amused him one day with the story of John Gilpin (for a discussion as to the historical reality of John Gilpin, see *Notes and Queries*, 2nd series, viii. 110; ix. 33; x. 350; 3rd series, ii. 429; 5th series, ix. 266, 394, 418; 6th series, i. 377, 416; ii. 177; v. 489). Next morning Cowper had produced his famous ballad, sent to Unwin in November 1782, who was made to 'laugh tears' by it, and published it in the 'Public Advertiser.' At the end of 1783 Lady Austen went to Bristol, and Cowper writing to Unwin (12 July 1784) states that he does not wish to renew the connection (two undated letters which follow this in SOUTHEY'S *Collection*, v. 54–62, speaking of the reconciliation, should be dated 1782). The cause of the final quarrel, which he assigns to Lady Hesketh (16 Jan. 1786), is that Lady Austen was too exacting. It is difficult to avoid the inference, though Southey argues against it, that some jealousy between Cowper's two muses was at the bottom of the breach. Some loverlike verses to Lady Austen, who wore a lock of his hair, were printed for the first time by Mr. Benham in the Globe edition of his poems. The relation was obviously a

delicate one, only to be maintained by a perfect congeniality of disposition. Lady Austen afterwards married an accomplished Frenchman, M. de Tardiff, and died in Paris 12 Aug. 1802 (HAYLEY). Cowper was left chiefly dependent upon the friendship of Bull, at whose suggestion he translated Mme. Guyon's poems. Thomas Scott, the biblical commentator, who had succeeded Newton, was respected, but apparently not loved, by Cowper. Meanwhile the 'Task' was finished, sent to Unwin, and accepted by Johnson in the autumn of 1784. Cowper's sensitive shyness had made him conceal the existence of his former volume from Unwin, who was hurt by his reticence. He now tried to make matters straight by confiding in Unwin instead of Newton, and gave some offence to Newton. While the 'Task' was in the press, Richard, or 'Conversation' Sharp met with 'John Gilpin,' and gave it to his friend, the actor Henderson (SOUTHEY, ii. 82). Henderson introduced it into some recitations which he was giving in 1785, and it had an astonishing success. One bookseller sold six thousand copies. It was inserted in the volume containing the 'Task,' which appeared in July 1785, and with the help of Gilpin made an immediate success. The success called attention to the previous poems, which were again published with the second edition of the 'Task' in 1786. Cowper at once obtained a place as the first poet of the day. In the 'Task,' his playfulness, his exquisite appreciation of simple natural beauties, and his fine moral perceptions found full expression. Cowper now revealed himself in his natural character. He speaks as the gentle recluse, describes his surroundings playfully and pathetically, and is no longer declaiming from the rostrum or pulpit of the old-fashioned satirist. He gave the copyright of the volumes to his publisher, who would afterwards have allowed him to resume the gift. Cowper did not consent. Besides general applause, the 'Task' brought him a renewed intercourse with his relations. Lady Hesketh, a widow since April 1778, now wrote to him. Her long silence had been due to absence abroad, ill-health, and domestic troubles, as well as want of religious sympathy. He replied in a charming letter (12 Oct. 1785), the first of a delightful series.

As soon as Cowper had finished the 'Tirocinium,' published with the 'Task,' he began (12 Nov. 1784) a translation of Homer. By 9 Nov. 1785 he had finished twenty-one books of the 'Iliad.' He began the work 'merely to divert attention' (SOUTHEY, ii. 192), and found the employment delightful. He translated forty lines a day, about the same number as Pope (to Newton, 30 Oct. 1784). He published a letter in the 'Gentleman's Magazine' for August 1785, and signed 'Alethea,' giving the usual reasons for dissatisfaction with Pope's false ornaments and sophistication of Homer in English rhyme. He now sent out proposals for publishing by subscription, and with some reluctance accompanied them with specimens of his work. Old friends, Walter Bagot, Colman, his cousin, General Cowper, and new acquaintances, especially Fuseli, the painter, corresponded with him upon the undertaking. Newton was a little alarmed at his increasing intercourse with the world. Lady Hesketh persuaded him to see a Dr. Kerr of Northampton for troubles of digestion. In 1786 he received a communication from an anonymous benefactor, who not only sent various presents, but settled upon him an annuity of 50*l.* a year. Cowper supposed the anonymous benefactor to be a man, and some one known to Lady Hesketh. In all probability it was his old love, Theodora. In June 1786 Lady Hesketh obtained additional subscriptions from his relations; of 20*l.*, and afterwards 40*l.* a year from Lord Cowper, and 10*l.* from W. Cowper of Hertingfordbury (probably the son of Major Cowper), besides adding 20*l.* herself (*Add. MS.* 24155, f. 123). Lady Hesketh herself came to Olney, having taken part of the curate's house. Her first good office was to induce Cowper and Mrs. Unwin to remove from Olney to the neighbouring village of Weston. Lady Hesketh paid the expenses, and they occupied their new abode in November 1786. The move had the advantage of facilitating the intercourse with the Throckmortons, a Roman catholic family, whose family seat was at Weston. In 1791 Throckmorton, now Sir John, left Weston, and was succeeded by his second brother George, then Mr. Courtenay, and afterwards Sir George Throckmorton. The intimacy, though valuable to Cowper, again alarmed Newton, who addressed a stern warning to Cowper upon the dangers of 'gadding' after friends who were scarcely christian in his sense. Cowper was wounded, though not alienated, and defended himself with excellent temper. In November 1786 William Unwin caught a fever from Henry Thornton, with whom he was travelling as tutor, and died at Winchester 29 Nov. 1786. Cowper's letters show a calm which is perhaps forced. He tried to distract himself by Homer, but a nervous fever followed, and in 1787 he had a fresh attack of insanity, lasting six months. He tried to hang himself, and was only saved by Mrs. Unwin accidentally entering the room and cutting him down. His recovery was rapid, but never

complete. He was henceforth subject to delusions, hearing voices, and occupied by strange fancies. His fame was fortunately attracting new friends, and the friendships were cemented by his singular sweetness of disposition and charming correspondence. Samuel Rose (1767–1804), son of a Chiswick schoolmaster, brought him messages from the professors of Glasgow just before his last attack, became ardently attached to him, and was afterwards a frequent visitor. About Christmas 1789 John Johnson, grandson of his mother's elder brother, Roger Donne, and nephew of Mrs. Bodham, came to him during the vacation from Cambridge, where he was a student. Upon hearing of Cowper from her nephew, Mrs. Bodham presented the poet with a portrait of his mother, thus suggesting one of his most touching poems. The friendship of Johnson, fondly called 'Johnny of Norfolk,' was afterwards invaluable.

Cowper's labours on Homer were interrupted by one or two minor labours—a review of Glover's 'Athenaid' for the 'Analytical Review' of February 1789, and a translation of the letters of Van Lier, a Dutch clergyman, undertaken for Newton in 1790; but Homer at last appeared in the summer of 1791, and was received with a favour not confirmed by later readers. If Cowper had avoided Pope's obvious faults, he had not the vigour which redeems them. The general effect was cramped and halting. He is so preoccupied with the desire to avoid Pope's excess of ornament that he becomes bald and prosaic (see Cowper's own remarks, Southey, vi. 235, vii. 75–83). He had about five hundred subscribers, including the Scotch universities and the Cambridge colleges. He appears to have received 1,000*l.* for the first edition, preserving the copyright (*ib.* iii. 10). The two volumes were sold for three guineas. Pope made nearly 9,000*l.* with about the same number of subscribers, but on very different terms. Cowper next undertook to edit a splendid edition of Milton, projected by his publisher Johnson, to be illustrated by Fuseli; while Cowper was to translate the Latin and Italian poems, and to furnish a comment. Milton soon engrossed him entirely, and apparently prevented his completion of a promising poem on Yardley Oak, which he kept to himself. In December 1791 Mrs. Unwin had a paralytic stroke, followed by a second in May 1794, which left her permanently enfeebled. On the second occasion William Hayley (1745–1820) was with him. Hayley had been engaged by Boydell & Nicol to write a life of Milton for a new edition. He wrote in generous terms to disown any thought of competition. Cowper responded, and a warm friendship sprang up. Hayley, though a bad poet, was a good friend. He tried to obtain a pension for Cowper from Thurlow. He sent Lemuel Abbott [q. v.] to Weston to paint Cowper's portrait, and he induced Cowper to undertake a journey to Eartham, near Chichester, where he then lived. At Eartham Cowper, with Mrs. Unwin, spent six weeks, meeting Hurdis and Romney, who again painted his portrait. Cowper and Hayley executed a joint translation of Andreini's 'Adam,' which they dictated to Johnson. Cowper returned to Weston, apparently not the worse for his journey. He had now formed a strange connection with a poor schoolmaster at Olney named Teedon, a conceited and ignorant man, whom he treats in earlier letters with good-humoured ridicule. A new relation began just before Mrs. Unwin's attack. Both Cowper and Mrs. Unwin consulted Teedon as a spiritual adviser (Mrs. Unwin's first note is dated 1 Sept. 1791), and Teedon continued afterwards to give oracular responses to Cowper's accounts of his dreams and waking impressions. Teedon's vanity was excited, and he even treated Cowper to literary advice, and offered to defend Homer against the critics. The letters, first published in 1834, in the appendix to the sermons of Henry Gauntlett (vicar of Olney 1815–34), are a melancholy illustration of the gradual decline of Cowper's sanity. Mrs. Unwin's decay imposed fresh burdens on his strength. She became exacting and querulous. He worked when he could at a second edition of his Homer and at Milton. The exquisite verses 'To Mary,' written about this time, show that his poetic power was not yet weakened. Rose brought Lawrence the painter to visit him and take another portrait in October 1793, and Hayley came soon afterwards. Lady Hesketh followed on Hayley's departure, and found Cowper sinking into a state of stupor. She again sent for Hayley in the spring of 1794, and his arrival enabled her to go and consult Dr. Willis, to whom Thurlow had written in favour of his old friend. A letter arrived from Lord Spencer announcing the grant of a pension of 300*l.* a year, for which Thurlow, who had ceased to be chancellor in June 1792, can have no credit. Cowper was incapable of attending to business, and the pension was made payable to Rose as his trustee. Lady Hesketh attended him affectionately, with great difficulties from Mrs. Unwin, who had a new attack of paralysis in April 1795. It was thought desirable, apparently on Willis's advice, to try a change of scene and to get rid of Mrs. Unwin's nominal management of

the household. Cowper and Mrs. Unwin were accordingly removed, under the guardianship of his devoted cousin, Johnson, in July 1795. They went first to North Tuddenham, near Johnson's residence at East Dereham. In August they visited Mundsley, on the Norfolk coast, where Cowper enjoyed walks by the shore, and began his last melancholy letters to Lady Hesketh. In October they settled at Danham Lodge, where they passed the winter, and after another visit to Mundsley settled at East Dereham. Here Mrs. Unwin died, on 17 Dec. 1796, Cowper receiving the news without emotion. His bodily health improved. Hayley tried to cheer him by the singular plan of obtaining testimonials to the religious effects of his works from Thurlow and Kenyon, whose judgments would have been more valuable in a question of law. Johnson tempted him with occasional success into literary occupation, and he finished a revisal of Homer and a new preface in March 1798. Shortly afterwards he wrote the pathetic 'Castaway,' his last original piece. He afterwards listened to his own poems, declining only to hear 'John Gilpin,' and translated some of Gay's fables into Latin. The last lines he ever wrote were a correction of a passage in his Homer, on a suggestion from Hayley. He gradually became weaker, and died peacefully on 25 April 1800. He was buried (2 May) in St. Edmund's Chapel, Dereham Church, where tablets, with inscriptions by Hayley, were erected to him and to Mrs. Unwin.

Cowper's portraits by Romney, Abbott, and Lawrence have been frequently engraved. Lady Hesketh thought Lawrence's admirable, but was shocked by a copy of Romney's, which gave, she thought, the impression of insanity instead of poetic inspiration (to Hayley, 5 and 19 March 1801, *Add. MS.* 30803 A). The portrait by Romney was sent by Mr. H. R. Vaughan Johnson to the Portrait Exhibition of 1858, to which Mr. W. Bodham Donne sent the portrait of Cowper's mother (by D. Heims). An engraving of the last by Blake is in Hayley's 'Life of Cowper.'

Cowper pronounced his name as Cooper (see *Notes and Queries*, i. 272).

Perhaps the best criticism of Cowper's poetry is in Ste.-Beuve's 'Causeries du Lundi,' 1868 (xi. 139-97). The 'Task' may have owed some popularity to its religious tone; but its tenderness, playfulness, and love of nature are admirably appreciated by the French critic, who was certainly not prejudiced by religious sympathy. The pathos of some minor poems is unsurpassable. Cowper is attractive whenever he shows his genuine self. His letters, like his best poetry, owe their charm to absolute sincerity. His letters are written without an erasure—at leisure but without revision; the spontaneous gaiety is the more touching from the melancholy background sometimes indicated; they are the recreation of a man escaping from torture; the admirable style and fertility of ingenious illustration make them perhaps the best letters in the language. A selection, edited by W. Benham, appeared in 1884, and a complete edition by Thomas Wright of Olney in 1904.

Cowper's life was written by Hayley chiefly from materials supplied by Lady Hesketh. She was very reluctant to permit the publication of letters, and positively forbade any reference to Theodora, who was still living, and sent some information, but said that a personal interview with Hayley would kill her on the spot. To spare Theodora's feelings, Cowper's relations to Mrs. Unwin were carefully represented as resembling devotion to a 'venerable parent,' and a false colouring given to the narrative. The correspondence with Lady Hesketh is now in the Addit. MS. 30803 A, B. The first edition, called 'Life and Posthumous Writings,' 2 vols. quarto, was published at Chichester in 1803; a second in the following year. A third, called 'Life and Letters,' appeared in 1809, and a fourth in 1812. The later editions gave much additional correspondence, Lady Hesketh having been gratified by the success of the book. Lady Hesketh's 'Letters to J. Johnson' concerning Cowper were published in 1901.

Cowper's works are: 1. 'Anti-Thelyphthora,' 1781 (anonymous). 2. 'Poems by William Cowper of the Inner Temple, Esq.,' 1782; preface by Newton is in some copies of first edition. 3. 'The Task,' to which are added the 'Epistle to Joseph Hill,' 'Tirocinium,' and 'John Gilpin,' 1785, described on the fly-leaf as second volume of poems by William Cowper (a second edition of both volumes appeared in 1786; other editions in 1787, 1788, 1793, 1794, 1798 (two), and 1800). 'John Gilpin' had appeared in various forms as a chapbook in 1783 (*Notes and Queries*, 5th ser. xi. 207, 373, 395). 4. 'Homer's Iliad and Odyssey,' 1791 (2 vols.); a second edition, revised by Cowper, was edited by Johnson in 1802. Southey represents the first edition as preferable. 5. 'The Power of Grace illustrated; in six letters from a minister of the reformed church (Van Lier) to John Newton, translated by . . . Cowper,' 1792. 6. 'Poems' (on his mother's picture and on the dog and waterlily), 1798. Posthumous were: 7. 'Poems . . . from the French of Mme. de la Motte Guyon, to which are added some original

poems,' &c. (by W. Bull), Newport Pagnel, 1801. 8. 'Adelphi, a Sketch of .... John Cowper, transcribed .... by J. Newton,' 1802. 9. 'Latin and Italian Poems of Milton, translated by W. Cowper,' 1808 (with illustrations by Flaxman; published by Hayley for the benefit of Cowper's godson, W. C. Rose). 10. 'Cowper's Milton' (published by Hayley, with an introductory letter to Johnson, in 4 vols.; it includes the translation of Andreini and Cowper's notes and translations from Milton), 1810. 11. 'Poems in 3 vols., by J. Johnson' (some new pieces in vol. 3), 1815. 12. 'Poems, the early productions of W. Cowper .... by James Croft,' 1825 (the poems to Theodora). Hayley says these satires are in a copy of Duncombe's 'Horace,' printed in 1750. Cowper also contributed sixty-seven hymns to the Olney Collection, 1779; two translations from 'Horace' to Duncombe's 'Horace' (1757–9); Nos. 111, 115, 134, and 139 to the 'Connoisseur;' two papers to the 'Gent. Mag.' (on his hares, June 1784, and on translating Homer, August 1785), and a review of Glover's 'Athenaid' to 'Analytical Review' Feb. 1789.

A critical edition of the 'Poetical Works' was edited by H. S. Milford in 1905.

[Hayley's Life of Cowper—reticent and indistinct—appeared (2 vols.) in 1803. A third volume in 1804 contained the correspondence with Unwin and Newton, communicated by Johnson. A volume called 'Supplementary Pages' and 'Yardley Oak,' hitherto unknown (1806), gives the correspondence with Bagot. A second edition, in 4 vols. 8vo, appeared in 1806, where the additional materials are arranged in their proper places; others in 1809 and 1812. The first editions are called 'Life and Posthumous Works'; the last two 'Life and Letters.' Hayley's correspondence with Lady Hesketh (Brit. Mus. Addit. MS. 30803 A, B) shows that he wrote under great restraint. A short Memoir by Johnson (Cowper's cousin) is prefixed to his Collection of Cowper's Poems in 3 vols. (1815). A Memoir of the Early Life of W. Cowper, written by himself, published in 1816, gives the full accounts of his first periods of insanity. Private Correspondence of William Cowper with several of his intimate friends, &c., by J. Johnson (1824), 2 vols., gives letters which had been omitted by Hayley from the correspondence published in 1804 (vol. iii. of the 'Life,' &c.) Poems, the early productions of W. Cowper (1825), with preface by James Croft, gives anecdotes by Lady Hesketh, the editor's aunt. A complete edition of Cowper's Works by Southey, with a memoir, 15 vols. (1834–7), has many additional letters. It is reprinted in Bohn's Standard Library. A rival edition by the Rev. T. S. Grimshawe (Johnson's brother-in-law) appeared in 1835 in 8 vols.; the Life is Hayley's revised. Grimshawe inserted the correspondence published by Johnson in 1824; Southey, whose publishers could not acquire the copyright, evaded the difficulty by quoting a great number of the letters in his Memoir. Southey's last volume contains Johnson's remaining letters, the copyright having apparently been acquired in the interval. Good memoirs by John Bruce and the Rev. W. Benham respectively are prefixed to the Aldine edition (1865) and the Globe (1889). The latest full life is by Thomas Wright, of Olney (1892), who published a complete collection of Cowper's letters (1904, 4 vols.) A list of Cowper's letters (1799 in number) by Bruce is in the Addit. MS. 29716. The collection of Cowper's Letters to Unwin and Rose is in Addit. MSS. 21154 and 21556. See also Rev. Josiah Bull's Memorials of (his grandfather) the Rev. W. Bull (1764); the Sunday at Home for 1866 (xiii. 347, 363, 378, 393); and John Newton ... an Autobiography from his Diary and other unpublished sources, published by the Religious Tract Society (1869). The last contains a brief commentary by Cowper on the first chapter of St. John's Gospel.] L. S.

COWPER, WILLIAM, D.D. (1780–1858), archdeacon, born at Whittington, Lancashire, 28 Dec. 1780, took holy orders in 1808, held for a time a cure of souls at Rawdon, near Leeds, but having obtained the post of colonial chaplain left England for Sydney, where he landed on 18 Aug. 1809. There he held the benefice of St. Philip's. He was long connected with and chiefly concerned in organising the Australian branches of the Bible Society, the Religious Tract Society, the Society for Promoting Christian Knowledge, and the Benevolent Society. He paid a brief visit to England in 1842. On his return to Australia he was appointed archdeacon of Cumberland and Camden (1848). In 1852 he acted as Bishop Broughton's commissary during the absence of that prelate in Europe. His example and influence helped to raise the tone of society in the colony. He died on 6 July 1858. His son was Sir Charles Cowper [q. v.]

[Times, 6 Sept. 1851, col. 9; Heaton's Australian Dict. of Dates.] J. M. R.

COWTON, ROBERT (*fl.* 1300), Franciscan, was educated at the monastery of his order at Oxford, and then at Paris, where he became doctor in theology of the Sorbonne. The only positive date in his life is given in an entry in the register of the bishop of Lincoln (ap. TANNER, *Bibl. Brit.* p. 204), which states that on 26 July 1300 he was licensed to receive confessions in the archdeaconry of Oxford, whereas all the biographers give his 'floruit' as 1340. Bale states that he was ultimately raised to the archbishopric of Armagh, but this is a mistake. Cowton is said

by Pits (*De Angliæ Scriptoribus*, § 527, p. 443) to have borne the distinguishing title among schoolmen of 'doctor amœnus.' This, no doubt (as is the case apparently with all the other titles of its kind), was not given him by contemporaries. His 'Quæstiones' on the four books of 'Sentences' of Peter Lombard must have enjoyed a wide popularity, at least in Oxford, to judge by the large number of manuscripts which still exist there. He also wrote 'Quodlibeta Scholastica,' 'Disceptationes Magistrales,' and 'Sermones ad Crucem Sancti Pauli.' Cowton is quoted as one of those who engaged in controversy relative to the conception of the Virgin Mary. Bale speaks as though he opposed the higher (or modern) view on the subject; but it is evident, considering the share which the Franciscan order took in the development of the doctrine of the immaculate conception, that the presumption is the other way; and this is, in fact, stated by Pits (*l. c.* pp. 443 et seq.) and Wadding (*Scriptores Ordinis Minorum*, p. 209, ed. Rome, 1806). Cowton is also cited by Wycliffe as the author of an abridgment of the theological works of Duns Scotus (Wycliffe, *De Benedicta Incarnatione*, ed. E. Harris, 1886, cap. iv. p. 57).

Out of seven manuscripts of the 'Quæstiones Sententiarum' in the college libraries at Oxford which bear Cowton's name, six offer the spelling 'Cowton,' and the remaining one has 'Couton.' The forms 'Conton' and 'Cothon' are manifest blunders, which seem to make their appearance first in Pits.

[Bale's Scriptt. Brit. Cat. v. 65, p. 424; cf. Sbaralea, supplement to Wadding's Scriptt. Ord. Min. p. 638 *b*.] R. L. P.

COX. [See also Coxe.]

COX, Captain ——, of Coventry (*fl.* 1575), collector of ballads and romances, is described as 'an od man, I promiz yoo: by profession a mason, and that right skilfull; very cunning in fens, and hardy as Gavin; . . . great oversight hath he in matters of storie' (Robert Laneham, 'A Letter whearin, part of the entertainment unto the Queenz Majesty at Killingwoorth Castl, in Warwik Sh'eer, in this Soomerz Progress, 1575, iz signified,' 8vo). The contents of the captain's library, which are described by Laneham at considerable length, are of the most curious character. Among the entertainments provided for Queen Elizabeth during her visit to Kenilworth was a burlesque imitation of a battle, from an old romance, and Captain Cox took a leading part. He is introduced on his hobby-horse in Ben Jonson's 'Mask of Owls, at Kenelworth. Presented by the Ghost of Captain Cox,' 1626.

[Captain Cox, his Ballads and Books; or Robert Laneham's Letter: On the Entertainment at Kenilworth in 1575. Re-edited . . . by F. J. Furnivall, 1871; Ben Jonson's Works, ed. Gifford (1875), viii. 52–5.] A. H. B.

COX, Anne (1766–1830), authoress. [See Woodrooffe, Anne.]

COX, COXE, or **COCKES, BENJAMIN** (*fl.* 1646), baptist, the son of a minister, was born in Oxfordshire about 1595. He is said to have been the son of a bishop; but this is impossible, for Richard Cox, bishop of Ely, died in 1581. He was probably a member of the bishop's family. Cox entered Oxford as a commoner of Christ Church in 1609, when he was about fourteen, and afterwards became a member of Broadgates Hall, whence he took his degrees in arts, proceeding M.A. in 1617. He was ordained, and held a living in Devonshire. According to one account, he was strongly in favour of ceremonies 'in Laud's time,' and was afterwards taunted by his presbyterian opponents for his zeal in this direction (Crosby, *History of the English Baptists*). Wood, however, says that he was always a puritan at heart, and it appears that in 1639 he was convened by Hall, bishop of Exeter, for preaching that the Church of England did not hold episcopacy to be *jure divino*, but made 'a handsome retractation' (Brook). The two accounts may to some extent be reconciled. Although a puritan and an enemy to episcopacy, Cox in his earlier days may have upheld the sacramental system as warmly as many other presbyterians did. After the outbreak of the civil war he ventured to express opinions that he had thought it prudent to conceal up to that time. He became a minister at Bedford, and openly preached the invalidity of infant baptism. In 1643 he was invited to form a congregation at Coventry. On his arrival Richard Baxter [q. v.], who was then chaplain to the rebel forces in the town, challenged him to a controversy. Cox imprudently accepted the challenge of an opponent whose arguments were supported by the swords of an admiring congregation. After the discussion had been held, the presbyterians ordered him to quit the town, and when he refused or delayed to do so they imprisoned him. Baxter was afterwards reproached for having instigated this act of intolerance; and though he denied that he had done so, he can scarcely have opposed it. After his release Cox went to London, and preached to a congregation of baptists, or, as they were then called, anabaptists. He was one of the managers of a public dispute that was to be held at Aldermanbury on 3 Dec. 1645, and,

when it was forbidden, joined in writing a declaration on the subject. He signed his name as Benjamin Cockes to the second edition of the 'Declaration of Faith of the Seven Congregations in London,' published in 1647. He conformed in 1662, but afterwards renounced his living, and continued a baptist until his death at an advanced age. He wrote: 1. A treatise answered by 'The great question . . . touching scandalous Christians, as yet not legally convicted, whether or no they may be admitted . . . at the Lord's Table,' by M. Blake, B.D., 1645. 2. According to Wood, a treatise on 'Infant Baptism.' 3. Also according to Wood, 'A True and Sober Answer.' 4. With Hansard Knollys and others, 'A Declaration concerning the Publicke Dispute which should have been in the Meeting House of Aldermanbury, Dec. 3 [1645], concerning Infant Baptism.' 5. 'An Appendix to a Confession of Faith. . . . Occasioned by the inquiry of persons in the County,' 1646; republished by the Hansard Knollys Society in 'Confessions of Faith,' 49. 6. 'God's Ordinance . . . the Saint's Priviledge,' 1646. 7. 'Some mistaken Scriptures sincerely explained,' 1646.

W. H.

COX, DANIEL (*d.* 1750), physician, proceeded M.D. at St. Andrews on 8 Nov. 1742, was admitted licentiate of the College of Physicians on 26 June 1749, elected physician to the Middlesex Hospital on 16 Oct. 1746, resigned 23 May 1749, and died in January 1750. He wrote 'Observations on the Epidemic Fever of 1741, . . . with Remarks on the use of Cortex,' published anonymously 1741; 'with new cases, and on the benefit of the cool method,' 1742; third edition, 'with . . . the benefit of bleeding and purging,' 1742. Cox is said by Munk to have died in January 1750; if so, he cannot have written, as Munk says, 'An Appeal to the Public on behalf of Elizabeth Canning' [q. v.], 1st and 2nd editions 1753; the introduction to L. Heister's 'Medical and Anatomical Cases,' 1755; letter on the subject of inoculation, 1757, 1758; and 'Observations on the Intermittent Pulse,' 1758. To this Daniel Cox, Munk and the compilers of the catalogue of the Library of the Royal Medical Society attribute 'Family Medical Compendium,' published at Gloucester. This appears to be an error; for the 'Medical Compendium' seems to have been first published about 1690, and an enlarged and improved edition in 1808, by D. Cox, chemist and druggist, of Gloucester. It is dedicated to Sir Walter Farquhar, and the 1808 edition ends with advertisements of the author's wares.

[Munk's Coll. of Phys. ii. 171; Cat. of Royal Medical Society's Library, i. 287; Brit. Mus. Cat.; Cox's New Medical Compendium, 1808.]

W. H.

COX, DAVID (1783–1859), landscape painter, was born in Heath Mill Lane at Deritend, a suburb of Birmingham, 29 April 1783. His father, Joseph Cox, was a blacksmith and whitesmith, and his mother (whose maiden name was Frances Walford) was the daughter of a farmer and miller. She had had a better education than his father, and was a woman of superior intelligence and force of character. She died in 1810, and his father married again, and died about twenty years afterwards, having received an annuity from his son for many years. Joseph and Frances Cox had only one other child, Maryanne, older than David, who married an organist of Manchester, named Ward. After her husband's death she resided at Sale, where her brother used frequently to stay with her.

When about six or seven years old, Cox was sent to a day school. His first box of colours was given to amuse him when confined to his bed with a broken leg. He used them first to paint kites for his schoolfellows, but when he got better he copied engravings and coloured them. Then came a short period at the free school at Birmingham, after which he worked for a little while in his father's smithy. As he was not a strong boy, they proposed to apprentice him to one of the so-called 'toy trades' originated by Mr. John Taylor of Birmingham, the toys consisting of buttons, gilt and lacquered buckles, snuff-boxes, lockets, &c., mounted in metal work and painted. One workman is said to have earned 3*l.* 10*s.* a week by painting tops of snuff-boxes at one farthing each. To qualify him for this employment, Cox was sent to the drawing school of Joseph Barber [q. v.], where he made much progress. Joseph Barber was the father of the artists Charles [q. v.] and John Vincent Barber [see BARBER, JOSEPH]. Both were at that time studying under their father, and Cox formed a lasting friendship with Charles.

At the age of fifteen Cox was apprenticed to a locket and miniature painter in Birmingham, named Fielder. He attained to considerable efficiency in the art, as is plain from a photograph of a locket painted with a boy's head which is contained in Solly's 'Memoir.' His engagement was terminated in about eighteen months by the suicide of Fielder, whose

body Cox was the first to find hanging on the landing. He then, through a cousin named Allport, got employed in grinding colours, &c., for the scene-painter at Birmingham Theatre, and continued his studies at Barber's. Old Macready (the father of the great tragedian) was then lessee and manager, and Cox worked with an Italian scene-painter named De Maria, an artist of whose works Cox used in after years to speak with enthusiasm. Cox soon began to paint side scenes, and brought himself specially into notice by painting a portrait of an actress which was needed for the scenery of a play. Macready then appointed him his scene-painter. Always kind to children, he painted scenes for little Macready's toy theatre, which were long preserved in the family. For two or three years Cox remained with the elder Macready, travelling about with the 'players' to Bristol, Sheffield, Manchester, Liverpool, and other places, sometimes taking minor parts when wanted, once appearing as a clown. When he could he still went out sketching with the Barbers. The life and manners of his stage companions were not congenial to him, and, having quarrelled with Macready, he got released from his engagement, and determined to go up to London.

He was now (1804) twenty years of age, and he accepted a proposal of Mr. Astley to paint scenes for his theatre in Lambeth. His mother came with him and settled him in lodgings with a widow named Ragg, in a road not far from Astley's Circus. Mrs. Ragg had two daughters, the eldest of whom, Mary, Cox afterwards married. Finding the scene-loft at Astley's full, and characteristically unwilling to intrude himself, he sought work elsewhere, and painted for the Surrey Theatre and for the theatre at Swansea, and (as late as 1808) for the theatre at Wolverhampton. By this time he had commenced his career as a landscape-painter in water-colours. Mr. Everitt, a dealer in drawings, &c., of Birmingham, introduced him to some friends, and his son Edward was one of his first pupils. Charles Barber and Richard Evans came up from Birmingham and sketched with him, and he sold his drawings at two guineas a dozen to Simpson of Greek Street. At this time, and for some years after, the banks of the Thames in and near London afforded materials for many of his drawings. He took lessons from John Varley, who refused to accept payment from him after the first few. In 1805 and 1806 he made sketching tours in North Wales. In 1808 Cox married Miss Ragg, who was some twelve years his senior, and removed to a cottage at the corner of Dulwich Common, where their only child David [q. v.] was born next year. Through Colonel the Hon. H. Windsor (afterwards Earl of Plymouth), Cox got some good introductions as a teacher of drawing, and was able to raise his fees from 5*s.* to 10*s.* a lesson. While living at Dulwich, Cox was drawn for the militia, and, after trying in vain to get off, he left home for a while quietly, returning when the fear of being arrested as a deserter was over. This interrupted his engagements as a drawing-master. His resources at this time appear to have been very low, and he commenced giving lessons in perspective to builders and artisans. The prices obtained by him for his drawings (1811–14) were still very small, ranging from seven shillings for a small sketch to six pounds for a large coloured drawing. In 1812 he took his wife to Hastings, and sketched with Havell [q. v.] in oils. He also went home nearly every year, and took some sketching excursions in Staffordshire and Warwickshire. He did not join the Society (now the Royal Society) of Painters in Water-colours till 1813, but before this he belonged to another society which failed. This was probably the short-lived 'Association of Artists in Water-colours,' started in 1808. The works of the society to which Cox belonged were, a year or two afterwards, seized by the owners of the Exhibition Gallery, and several of Cox's were sold. One of them, purchased by Mr. J. Allnutt (a view of 'Windsor Castle'), was found in 1861, when Mr. Allnutt's collection was being prepared for sale, to have two other drawings underneath it attached to the sketching-board.

In 1813 he accepted an appointment as teacher of drawing at the Military Academy at Farnham, but this obliged him to break up his home, and after a few terms he found the duties too uncongenial to continue. In the following year he took up his residence at Hereford as drawing-master in Miss Croucher's school, at a salary of 100*l.* a year, with liberty to take pupils. At Hereford he remained till the close of 1826, living first in an old cottage at Lower Lyde. In the spring of 1815 he moved to George Cottage, All Saints, and at the end of 1817 to Parry's Lane; here he stayed to the end of 1824, when he moved to a house built by himself on land of his own. This property, called 'Ashtree House,' he then disposed of for about 1,000*l.* to Mr. Reynolds, a West Indian planter, who changed the name to Berbice Villa.

These years at Hereford, like all his years, were filled with hard work, and marked by gradual progress in the mastery of his art. He taught at Miss Croucher's till the end of

1819, and at the Hereford grammar school for some years from 1815, receiving only six guineas a year from the latter. He also taught at a school kept by Miss Poole, and at others at Leominster and neighbouring places. He gave lessons in many private families, some at a distance from Hereford. About 1812 he began to make etchings (soft ground) on copper from his own drawings, for his educational works on landscape art. The first of these was published by S. & J. Fuller, London, 1814, and is called 'A Treatise on Landscape Painting and Effect in Water-colours, from the first Rudiments to the finished Picture, with examples in outline effect and colouring.' This work was illustrated by a number of soft etchings and coloured aquatints. It was followed in 1816 by 'Progressive Lessons in Landscape for young beginners,' a series of twenty-four soft etchings without letterpress. In 1820 appeared some views of Bath (Lansdowne Crescent, the Pump Room, &c.), and in 1825 his 'Young Artists' Companion, or Drawing-Book of Studies,' &c. All these works were published by S. & J. Fuller, London. During his stay near Hereford he (except in 1815 and 1817) contributed regularly to the exhibitions of the Society of Painters in Water-colours. He sent twenty-three drawings in 1824, thirty-three in 1825, and twenty-two in 1826. He also, both at Parry's Cottage and Ashtree House, took pupil-boarders at the rate of 70*l.* or seventy guineas for board, lodging, and instruction. By dint of all this industry and the exercise of economy, Cox, though still poorly paid for his work, managed not only to live but to save a little. Every year he went to London before the exhibitions opened, generally stopping at Birmingham on his way, to see his old friends and sell drawings. In London he usually spent a month or more, and gave lessons to his old pupils, and every year he took a sketching holiday. In 1819 he went to North Devon and Bath, in 1826 to Brussels with his brother-in-law, and through Holland with his kind friends the Hoptons of Canon-Frome Court; but North Wales was his usual resort then as afterwards. So few were the striking events in his life that the entry of Ann Fowler into his service in 1818 (who was never to leave him till his death) and the painting a large drawing in recollection of Turner's picture of Carthage become facts of importance. This drawing was large and highly finished, far brighter in colouring than Cox's usual work. It was sold at the Exhibition of Water-colours in 1825 for 50*l.*, and was afterwards in the Quilter collection.

In 1827 Cox removed to London, and took up his residence at 9 Foxley Road, Kennington Common, where he remained till 1841. In 1829 and 1832 he made short trips to France, visiting Calais, Boulogne, St. Omer, and Dieppe; and between these years he made the acquaintance of William Stone Ellis, Norman Wilkinson, and William Roberts, who, with Charles Birch, were his principal companions on his sketching tours. In 1829 he took lodgings at Gravesend for a while; in 1831 he went with his son to Derbyshire, and made drawings of Haddon Hall, going afterwards to the lakes. In 1834 he accompanied Ellis to Lancaster, and made studies of the Ulverston Sands, Bolsover Castle, and Bolton Abbey. In 1836 he visited Rowsley, Bath, and Buxton, and took a tour in Wales to make sketches for Thomas Roscoe's 'Wanderings and Excursions, &c., in North Wales' (1836) and 'Wanderings and Excursions, &c., in South Wales' (1837). He made altogether thirty-four drawings for these works, which were engraved by William Radcliffe [q. v.] In 1837 he visited Lord Clive at Powis Castle, and stayed at Seabrook, near Hythe, where he drew Lymne Castle, introduced into a celebrated water-colour drawing called 'Peace and War.' His life is indeed little more than an itinerary and a record of hard work in painting and teaching, accompanied by continual increase of power and slow progress in public favour.

He now began to have a great desire to paint in oils. He had, as has been stated, sketched in oils as early as 1812, but had not hitherto painted any oil picture, or at least not one of any importance. Mr. Roberts was his great encourager and instructor in this new departure. In 1839, when W. J. Müller [q. v.] returned from his journeys in Greece and Egypt, Cox was introduced to him by Mr. George Fripp, the well-known artist. Cox was at that time fifty-six years old and Müller twenty-seven, but the elder went, and went again, to see the young genius paint. He wondered at the ease and rapidity of his execution, and he watched him with that humility and desire to learn which were his constant qualities through life. One of the pictures which he watched Müller paint was the famous 'Ammunition Waggon.' Some of Cox's friends endeavoured to deter him from his resolve to paint in oils, but he was determined to succeed, and he did. One of his oil pictures, 'Washing Day,' painted in 1843, or four years after his lessons from Müller, sold at Christie's in 1872 for 945*l.*, and this is far below the prices which his later oil pictures have fetched in recent years. He soon preferred the new medium, and it is now becoming generally recognised that it was

better adapted than water-colours to the expression of his peculiar genius; but during his life and for many years after his death he was scarcely known as a painter in oils.

It was partly because he wished to devote himself to painting in oils that he left London in 1841 and returned to the neighbourhood of his native place; and it was at Greenfield House, Greenfield Lane, Harborne, near Birmingham, that he lived from that year till his death. To this period belong all his great oil pictures and the noblest and most poetical of his water-colour drawings. The inspiration of most of these was drawn mainly from North Wales, especially from Bettws-y-Coed and its neighbourhood, to which he paid a yearly visit from 1844 to 1856. In 1843 he had a somewhat serious illness, and to recruit himself he went to stay with his sister at Sale. Though now attaining the zenith of his power, his prices were still low, and his greatness was only recognised by a few. One of his small oils was rejected by the British Institution in 1844, and the following year his drawings were ill-hung at the Water-colour Society, and he complained that he could not finish to please the public. This year he had a bad chest attack, and went to Rowsley, Haddon Hall, and later to the Royal Oak at Bettws. It was in this year also that he lost his wife, whose health had been gradually failing for some time. They had lived very happily together for thirty-seven years, and he felt her loss deeply. She was a very intelligent woman, who took the greatest interest in his work. She sat with him while he painted, and was an admirable and severe critic. Cox's deep religious convictions aided him in recovering from this blow. In December he wrote to his son and daughter-in-law: 'I certainly was very much out of spirits when I wrote on Thursday, but I am much better now; and I believe I have no real cause to be otherwise, for all things, I feel, are ordained for the very best, for my good. I have been at my work with more calmness, and shall, I have no doubt, do better and be better in all ways, with God's grace and assistance. Your letter was of the most encouraging kind, too, with regard to my work, and yesterday I took your advice and immediately took up a canvas to begin an oil for the institution.' This picture was called 'Wind, Rain, and Sunshine' (or 'Sun, Wind, and Rain'), a title suggested by Turner's 'Rain, Steam, and Speed,' exhibited the previous year (1844) at the Royal Academy. The next year (1846) he painted two of his most celebrated oil pictures, 'The Vale of Clwyd' (3 ft. 3 in. by 4 ft. 8 in.) and 'Peace and War' (18½ in. by 24 in.) The former was returned unsold from the Liverpool Exhibition, in the catalogue of which it was priced at eighty guineas; the latter was given to a friend, and afterwards bought from him by Cox for 20*l.*, and sold again by Cox for the same sum. In 1872 'The Vale of Clwyd' was sold for 2,200*l.*, and 'Peace and War' (quite a small picture) for 3,601*l.* 10*s.* Another 'Vale of Clwyd' (painted 1848) sold the same year for 2,500*l.* Indeed he may be said to have spent the rest of his life in painting pictures and making drawings which are now (in England) among the most highly prized and coveted art treasures of the world. In 1883 his 'Going to the Hayfield' brought 2,405*l.*, and in 1884, at the sale of Mr. Potter's collection, 'The Church at Bettws-y-Coed' sold for 2,677*l.* At a sale a little later in the same year 'Going to Market' fetched 2,047*l.* 'The Skylark' (1849) and 'The Seashore at Rhyl' are other oil pictures painted by Cox after 1845 which have in recent years sold for sums exceeding two thousand pounds. His water-colour drawings also fetch large sums. At the Quilter sale (April 1875) 114 drawings, of which many were quite small, sold for rather more than 22,900*l.*, averaging above 200*l.* each. Two fetched 998*l.*, four others over 1,000*l.*, and one, 'The Hayfield,' 2,950*l.*, a price unparalleled for any water-colour, even by Turner. Nor has any landscape of the size of 'Peace and War' (oil) ever sold for anything like the same sum. Yet he never received more than 100*l.* for any one work. A good deal of pity has been expressed for him on this account, but it was well said by Mr. Edward Radcliffe (son of the engraver already mentioned), in a speech delivered at a dinner given by the Liverpool Art Club in 1875 to commemorate an exhibition of David Cox's works, that 'he would not like his life to have been changed one bit,' and 'no man more thoroughly enjoyed his life. His habits and tastes were of the most simple kind. He saved what to him was a large competency. His house with all its surroundings was a model of English comfort. Suppose he had been besieged by patrons and dealers, he might have launched out . . . kept his carriage, taken his '40 port, and died twenty years before he did, and, instead of being remembered by troops of friends as a dear simple friend, only thought of as a big Mogul.'

The interest of these last years as regards his life is centred at Bettws-y-Coed. As Suffolk to Constable and Norfolk to Old Crome, so was North Wales to Cox. He painted well wherever he went—London, Hereford, Yorkshire, Lancashire, or Calais—

but it was Wales that he loved and understood best; it was Wales that drew from him his deepest notes of poetry, his noblest sympathy with his kind. He is the greatest interpreter of her scenery and her life. At the Royal Oak at Bettws he put up for some weeks every autumn. In 1847 he repainted its signboard, a subject since of litigation. He also painted a plastered-up door of the inn with a copy of Redgrave's cartoon of Catherine Douglas securing the door with her arm. It was there in 1849 that he sallied forth in the night and washed off from the church porch the drawings of some irreverent young artists. It was there that he saw the touching scene which he afterwards wrought into his noble drawing of the 'Welsh Funeral.' It was there he sketched the church, the mill, the 'big' meadow, and the peasants gathering peat—all subjects immortalised by his art.

At home he worked as hard as ever. He writes to his son in 1849: 'In an evening I go to oil painting (small pictures). I wish I could finish them by lamplight as well as I can make a beginning, for I find when I paint in oil and water colours by lamplight my picture is always broader in effect and more brilliant, and often better and more pure in the colour of the tints.' Now when his power was developing to its greatest, when he was attaining that breadth and brilliancy and that purity of tint in which he has no rival, when he was grasping more firmly than ever the greater truths of nature, its light and air and colour, when he could inspire his work with that large spirit of humanity and that solemn deep feeling which may almost be called biblical, when his hand was trained to express the highest thought of which his nature was capable, just at this time some of his brother-artists, the committee of the society, thought his drawings too rough. 'They forget,' wrote Cox with a self-assertion rare to his humble nature, 'they forget they are the work of the mind, which I consider very far before portraits of places (views).' This was in 1853, the year of 'The Challenge' and 'The Summit of a Mountain,' two of the finest of his later works. The former was, however, hung in the place of honour, and the latter found admirers at Harborne, for Cox wrote to his son: 'Perhaps I am made vain by some here who think my "Summit of a Mountain" worth—I am almost afraid to say—100*l.*, and if I could paint it in oil, I shall some day, with D.V., get that sum.'

This year Cox had a severe attack of bronchitis, and this was followed in June by a rush of blood to the head as he stooped to cut some asparagus in his garden. The effect of the seizure was something like paralysis. He was soon sketching again, but his eyesight was affected and one lid drooped. Nevertheless in 1854 and 1855 he was able to execute some fine drawings and pictures, and in the latter year he went to Edinburgh with his son and Mr. William Hall, an artist, his intimate friend and biographer, to have his portrait painted by Sir John Watson Gordon. The cost of the portrait was subscribed by a committee of his friends and admirers, and it was completed and presented to him in November at Metchley Abbey, Harborne, the residence of Mr. Charles Birch, the chairman. It now belongs to the Birmingham and Midland Institute. Next year it was exhibited at the Royal Academy, and Mr. (afterwards Sir William Boxall [q. v.] painted another portrait of him. This year also (1856) Rosa Bonheur came to Birmingham and paid a visit to Cox. Thus, though his full greatness was not recognised, it cannot be said that he was without honour or fame, and his drawings of 1857, 'rougher' though they were than ever, are said to have 'made a great impression on the public. It was known that the state of his health prevented his bestowing the same amount of labour as formerly on the 'finishing' of his works, and they were regarded as the last expressions of a great mind in harmony with nature and at rest with itself.' He went to London again that year, but he was taken unwell at the beginning of June, and though he recovered sufficiently to enjoy painting again, and exhibited drawings in 1858 and 1859, he did not leave Harborne any more. He died on 7 June 1859. He was buried in Harborne churchyard on the 15th, and the funeral was marked by the genuine emotion of all that were present, including the poor of the neighbourhood, to whom he was constant in his charity. A stained glass window to his memory has been placed in Harborne Church, and a bust, by Peter Hollis, is in the Public Art Gallery of Birmingham.

The character of Cox was one of singular nobleness and simplicity, and he was beloved by all who came in contact with him. Of book learning he had little, and his life was devoted to his art, which reflects his deep love of nature, his sympathy with his fellow-men, his faithfulness, his industry, and his imagination. No man appreciated more highly the work of his most gifted contemporaries. He was one of the earliest subscribers to Turner's 'Liber Studiorum,' and this at a time when he could ill afford it. He painted, from memory, pictures by Turner, Martin, and Cattermole. He copied from Bonington, and has left records of his appreciation of Cotman and others. Of his art,

technically, this is scarcely the place to speak, but of the great band of early English landscape painters there is no one whose methods were more original or successful. He used few colours and a full brush, disregarding small details in order to obtain greater breadth and brilliancy of effect. In the purity of his tints, in the irradiation of his subject with light, in his rendering of atmosphere and atmospheric movement, in the fulness and richness of his colour, his best work is unexcelled. And his colours were the colours of nature; he belonged to what has been called the faithful school of landscape-painting, and he is at the head of it, with Girtin and Constable and De Wint.

There are a number of his drawings in the British Museum and the South Kensington Museum, but no oil picture of his belongs to the nation, and his greatest water-colour drawings are all in private hands.

There have been several exhibitions of Cox's pictures and drawings. One at the end of 1858 (before his death), in the rooms of the Conversazione Society at Hampstead; another in 1859 (170 works), at the German Gallery, New Bond Street; another at Manchester in 1870. The Burlington Fine Arts Club had a small collection in 1873 (lent by Mr. Henderson, and now in the British Museum), and the Liverpool Arts Club a large one (448 works, including five oil pictures) in 1875. He was also represented at the Manchester Exhibition of 1857, at the International Exhibition of 1862, and at Leeds in 1868, but his full power as a painter, especially as a painter in oil colours, has never been so well displayed, nor so fully recognised, as at the exhibition at Manchester this year (1887).

[For the events of his life the chief authorities are Hall's Biography and Solly's Memoir of David Cox. Solly's book, though it appeared some years before Hall's, was based on Hall's manuscript. Both books contain also much about his art, and notes by the artist as to his own practice. For his views on art, see his Treatise on Landscape and other works of his mentioned in the article. See also Palgrave's Handbook to the Fine Art Collections in the International Exhibition of 1862; Redgraves' Century of Painters; Bryan's Dictionary (Graves); Portfolio, iv. 89, vii. 9; Gent. Mag. new ser. xx. 230; Art Journal, ix. 123; Dublin Univ. Mag. liii. 747; Chesneau's English School of Painting; Our Living Artists (1859); Wedmore's Studies in English Art.]

C. M.

COX, DAVID, the younger (1809–1885), water-colour painter, only child of David Cox, the famous water-colour painter [q. v.], and Mary Ragg, his wife, was born in the summer of 1809 in the cottage on Dulwich Common, where his parents had settled after their marriage. In 1812 he accompanied his father to Hastings, and in the following year, on the break-up of their home at Dulwich, spent some time with his grandfather, Joseph Cox, at Birmingham, and also with an aunt at Manchester. In the autumn of 1814 he rejoined his father in his new home at Hereford, and was partly educated at the grammar school in that town. He became his father's constant companion and his pupil, and was seldom parted from him, accompanying him on his excursions at home and abroad. In 1826 he resolved to become an artist himself, and in the following year removed with his parents from Hereford to London, in that year exhibiting for the first time at the Royal Academy. About 1840 he married, but still continued to be his father's helpmate, and the sharer in all his domestic anxieties or good fortune. In 1849 he was elected an associate of the Society of Painters in Water-colours. Through his devoted admiration for the works of his father's genius, and the careful study he continually made of his father's method, Cox managed, with the moderate ability that he possessed, to produce some very creditable paintings. As might have been expected, they seem but a reflection of his father's work, and show a marked deterioration after he lost his father's guidance. Among these were 'Near Bala,' 'Moon Rising,' and 'View on the Menai' (1872); 'Loch Katrine' and 'Ben Lomond' (1873); 'Sunday Morning in Wales' and 'Rain on the Berwyn' (1875); 'The Path up the Valley' (1877); 'Penshurst Park' (1878). Specimens of his work may be seen in the national collections at the South Kensington Museum and the Print Room, British Museum. Cox died at Streatham Hill on 4 Dec. 1885. He possessed a valuable collection of his father's works.

L. C.

COX, EDWARD WILLIAM (1809–1879), serjeant-at-law, eldest son of William Charles Cox of Taunton, manufacturer, by Harriet, daughter of William Upcott of Exeter, was born at Taunton in 1809, and educated at the college school in that town. He was called to the bar at the Middle Temple on 5 May 1843 and joined the western circuit, but never obtained much practice as a barrister. As early as 1830 he wrote a poem for the 'Amulet' called 'The Tenth Plague,' and produced a volume of

poems entitled 'The Opening of the Sixth Seal.' He was recorder of Helston and Falmouth from February 1857 to June 1868, and recorder of Portsmouth from the latter date to his death. He contested Tewkesbury as a conservative in 1852 and 1857, and Taunton in 1865. On 18 Nov. 1868 he was elected one of the members for his native town, but was unseated in favour of Henry James, Q.C., on 5 March 1869 (*O'Malley and Hardcastle's Reports of Election Petitions*, i. 181-7, 1870). He became serjeant-at-law 1868. He was appointed chairman of the second court of Middlesex sessions in March 1870, and continued throughout his life to discharge the duties of that post. He established the 'Law Times' on 8 April 1843, and thenceforth devoted to it the larger portion of his time and attention. This journal's series of reports at once attracted the support of the leading members of the legal profession, who in 1859 presented the proprietor with a very handsome testimonial for his services in establishing and conducting the 'Law Times.' In 1846 he brought out the 'County Courts Chronicle and Gazette of Bankruptcy,' the only publication which gave exclusive attention to the inferior courts. Some years afterwards he purchased from Benjamin Webster the actor, for a mere trifle, 'The Field, a Gentleman's Newspaper devoted to Sport' (originally established in 1853), which in a short time he so improved that it returned a profit of about 20,000*l.* a year. Subsequently he became proprietor of 'The Queen, a Lady's Newspaper,' which had been started in 1861. He next established the 'Exchange and Mart,' the plan of which was suggested by the correspondence columns of 'The Queen,' and this being a success, he in 1873 brought out 'The Country, a Journal of Rural Pursuits,' and then two other papers called respectively 'The Critic' and 'The Royal Exchange.' He was the author of several well-known legal works, the most important of which, 'The Law and Practice of Joint-Stock Companies,' ran to six editions. He founded, and was the president of, the Psychological Society of Great Britain (22 Feb. 1875), a society which collapsed on his death, and was dissolved on 31 Dec. 1879. In the interest of this association he published several treatises of great originality and vigour, such as 'What am I?' 'The Mechanism of Man,' and other works. He was a most consistent believer in spiritualism, and a great admirer of Mr. Daniel Home. He died at his residence, Moat Mount, Mill Hill, Middlesex, on 24 Nov. 1879, and was buried in Colney Hatch cemetery on 29 Nov. He married first, in 1836, Sophia, daughter of William Harris, surgeon in the royal artillery; and secondly, 14 Aug. 1844, Rosalinda Alicia, only daughter of J. S. M. Fonblanque, commissioner of bankruptcy. His will was proved on 11 Dec., when the personalty was sworn under 200,000*l.*

The following is a list of the principal works written or edited by Cox: 1. '1829, a Poem,' 1829. 2. 'Reports of Cases in Criminal Law determined in all the Courts in England and Wales,' 1846-78, 13 vols. 3. 'Railway Liabilities,' 1847. 4. 'Chancery Forms at Chambers,' 1847. 5. 'The Law and Practice of Registration and Elections,' 1847. 6. 'The new Statutes relating to the Administration of the Criminal Law,' 1848. 7. 'The Powers and Duties of Special Constables,' 1848. 8. 'The Magistrate,' 1848. 9. 'The Practice of Poor Removals,' 1849. 10. 'The Advocate, his Training, Practice, Rights, and Duties,' 1852. 11. 'Conservative Principles and Conservative Policy, a Letter to the Electors of Tewkesbury,' 1852. 12. 'Conservative Practice, a second letter,' 1852. 13. 'The Practical Statutes,' 1853. 14. 'The Law and Practice of Joint-Stock Companies,' 1855. 15. 'The Law and Practice of Bills of Sale,' 1855. 16. 'The Practice of Summary Convictions in Larceny,' 1856. 17. 'A Letter to the Tewkesbury Electors,' 1857. 18. 'The Arts of Writing, Reading, and Speaking, in Letters to Law Students,' 1863. 19. 'How to prevent Bribery at Elections,' 1866. 20. 'The Law relating to the Cattle Plague,' 1866. 21. 'Representative Reform, proposals for a Constitutional Reform Bill,' 1866. 22. 'Reports of all the Cases decided by the Superior Courts of Law and Equity, relating to the Law of Joint-Stock Companies,' 1867-71, 4 vols. 23. 'A Digest of all the Cases decided by the Courts relating to Magistrates' Parochial and Criminal Law,' 1870. 24. 'Spiritualism answered by Science,' 1871. 25. 'What am I?' 1873. 26. 'The Mechanism of Man,' 1876. 27. 'The Conservatism of the Future,' 1877. 28. 'The Principles of Punishment as applied to the Criminal Law by Judges and Magistrates,' 1877. 29. 'A Monograph of Sleep and Dreams, their Physiology and Psychology,' 1878. Cox prepared law books and reports with other persons, and contributed to the Transactions of the Psychological Society and the London Dialectical Society.

COX, FRANCIS AUGUSTUS (1783-1853), baptist minister, was born at Leighton Buzzard, 7 March 1783. He inherited much property from his grandfather, who was a leading member of the baptist congregation at Leighton Buzzard. After some study under a private tutor at Northampton, Cox went to the baptist college at Bristol, and thence to the University of Edinburgh, where he proceeded M.A. On 4 April 1805 he became baptist minister at Clipstone, Northamptonshire; afterwards occupied for a year the pulpit vacated by Robert Hall at Cambridge, and on 3 Oct. 1811 became minister at Hackney. Cox helped to found the 'Baptist Magazine' in 1809, and wrote largely for it. He was also secretary for three years to the general body of dissenting ministers of the three denominations residing in South London and Westminster. About 1823 he actively promoted the scheme for a London university, and came to know Lord Brougham. When Brougham was lord rector of Glasgow, the degree of LL.D. was conferred on Cox (1824). In 1828, when the London University was founded, it was decided that no minister of religion should sit on the council, and Cox was appointed librarian, but he quickly resigned the post. In 1838 he travelled in America as representative of the baptist union, and received the degree of D.D. from the university of Waterville. He died in South Hackney 5 Sept. 1853, after holding the pastorate of Hackney for forty-two years. Cox was thrice married, and had a family of five sons and two daughters. His works, other than separate sermons, were as follows: 1. 'Essay on the Excellence of Christian Knowledge,' 1806. 2. 'Life of Philip Melancthon,' 1815. 3. 'Female Scripture Biography,' 1817, 2 vols. 4. 'Vindication of the Baptists,' 1824. 5. 'Narrative of the Journey in America,' 1836. 6. 'History of the Baptist Missionary Society,' 1842. Cox contributed an article on Biblical Antiquities connected with Palestine to the 'Encyclopædia Metropolitana,' which he published as a separate volume in 1852.

[Gent. Mag. 1854, pt. i. 323; Brit. Mus. Cat.]

COX, GEORGE VALENTINE (1786-1875), author, born at Oxford in 1786, was educated at Magdalen College school and New College, graduated B.A., and was elected esquire bedel in law in 1806, took the degree of M.A. in 1808, and was elected esquire bedel in medicine and arts in 1815. He held this office until 1866, when he retired on a pension. He was also coroner to the university. He died in March 1875. He published 'Jeannette Isabelle,' a novel in three volumes, London, 1837, 12mo; three translations from the German, viz. F. C. Dahlmann's 'Life of Herodotus,' London, 1845, 8vo; J. A. W. Neander's 'Emperor Julian and his Generation,' London, 1850, 8vo; and C. Ullmann's 'Gregory of Nazianzum,' London, 1851, 8vo; also 'Prayer-Book Epistles,' &c., London, 1846, 8vo; and 'Recollections of Oxford,' London, 1868, 8vo.

[The last-mentioned work contains many interesting personal reminiscences, and is the chief authority for the facts stated above; see also Athenæum, Jan.–June 1875, p. 425; Brit. Mus. Cat.] J. M. R.

COX, LEONARD (*fl.* 1572), schoolmaster, was the second son of Laurence Cox of Monmouth, by Elizabeth [Willey] his wife, and received his education in the university of Cambridge, where he graduated B.A. (Cooper, *Athenæ Cantab.* i. 94). In 1528 he removed to Oxford, where he was incorporated as B.A. on 19 Feb. 1529–30, and he also supplicated that university for the degree of M.A., though whether he was admitted to it does not appear (Wood, *Fasti Oxon.* ed. Bliss, i. 83; Boase, *Register of the Univ. of Oxford*, i. 159). Soon afterwards Hugh Farringdon, abbot of Reading, appointed him master of the grammar school in that town, which appointment was confirmed by the king by patent on 10 Feb. 1540–1, his salary being 10*l.* per annum charged on the manor of Cholsey, which had been an appendage of the abbey (Rymer, *Fœdera*, xiv. 714). When John Frith, the martyr, was apprehended as a vagabond at Reading and set in the stocks, Cox 'procured his releasement, refreshed his hungry stomach, and gave him money' (Wood, *Athenæ Oxon.* ed. Bliss, i. 74). He was succeeded in the mastership of Reading school by Leonard Bilson in 1546 (Man, *Hist. of Reading*, p. 196). About this period he travelled on the continent, visiting the universities of Paris, Wittenberg, Prague, and Cracow (Leland, *Encomia Illustrium Virorum*, p. 50). Afterwards he went to reside at Caerleon in his native county, where he appears to have kept a school. In or about 1572 he became master of the grammar school at Coventry, founded by John Hales. If he held that appointment until his death, he must have died in 1599, when John Tovey succeeded to the mastership (Colvile, *Worthies of Warwickshire*, p. 883; Tanner, *Bibl. Brit.* p. 205).

Cox, who was a friend of Erasmus and Melanchthon, was himself eminent as a grammarian, rhetorician, poet, and preacher, and was skilled in the modern as well as the learned languages (Bale, *De Scriptoribus*,

pt. i. p. 713). He was author of: 1. 'The Art or Crafte of Rhetoryke,' 1524; and also Lond. (Robert Redman), 1532, 16mo (Lowndes, *Bibl. Man.* ed. Bohn, 543; Coates, *Hist. of Reading*, p. 322). 2. 'Commentaries upon Will. Lily's Construction of the eight parts of Speech,' 1540. He also wrote verses prefixed to the publications of others, and translated from Greek into Latin 'Marcus Eremita de Lege et Spiritu,' and from Latin into English 'Erasmus's Paraphrase of the Epistle to Titus,' 1549, with a dedication to John Hales, clerk of the hanaper (Strype, *Ecclesiastical Memorials*, ii. 30, folio). He had a son, Francis, D.D., of New College, Oxford.

[Authorities cited above.] T. C.

COX, RICHARD (1500–1581), bishop of Ely, one of the most active of the minor English reformers, was born at Whaddon in Buckinghamshire. After receiving some education at the Benedictine priory of St. Leonard Snelshall, near Whaddon, he went to Eton, and thence to King's College, Cambridge, in 1519, proceeding B.A. in 1523–4. He was invited by Wolsey to enter his new foundation of Christ Church in Oxford as junior canon soon afterwards, and was incorporated B.A. at Oxford 7 Dec. 1525, and was created M.A. 2 July 1526. Becoming known as a Lutheran, he was forced to leave the university, and removed to Eton, where he was head-master. He proceeded B.D. at Cambridge in 1535, and D.D. in 1537, and was made chaplain to the king, to Archbishop Cranmer, and to Gooderich, bishop of Ely. His name appears in several important transactions of the reign of Henry VIII. In 1540 he was on the commission which composed 'The Necessary Doctrine and Erudition of a Christian Man,' the third great formulary of Henry (*Lords' Journals*, April), and his answers to the questions which were preliminarily propounded to the commissioners are extant among the rest (Burnet, *Coll.* iii. 21). He was also on the commission of clergy, of the same date, which pronounced the king's marriage with Anne of Cleves null and void (*State Papers*, i. 634). In the same year (24 Nov.) he was made archdeacon of Ely; on 3 June 1542 became prebendary of Lincoln; on 8 Jan. 1543–4 he became dean of the cathedral, Osney, and when the seat of the deanery was transferred to Oxford he was the first dean of Christ Church (21 May 1547). In 1542 he was on the commission which was nominated by convocation for making an authoritative version of the Bible, where he was one of those to whom the Old Testament was assigned (Wilkins, iii. 860). That project was quashed by the interference of the king. In 1546 he was one of the officials appointed to hear Dr. Crome publicly recant at Paul's Cross, and with the others he denounced the recantation as feigned and insufficient; and in the subsequent inquiry before the privy council 'did notably use himself against Crome' (*State Papers*, i. 843). On the accession of Edward VI his advancement was rapid. He was already tutor and almoner (since 7 July 1544) of the king. On 28 Sept. 1547 he became rector of Harrow, Middlesex, and on 23 April 1548 canon of Windsor. He was in high favour with Cranmer, insomuch that he was one of the only two doctors who were included with the bishops in giving answers to the questions on the mass that were issued by the primate about the beginning of the reign (Burnet, *Coll. to Edw. VI*, i. 25; Dixon, ii. 476). He was on the celebrated Windsor commission, which in 1548 compiled the first English communion, the first prayer-book in 1549, and probably the first English ordinal in 1550, and which seems to have been further employed in revising the first prayer-book, and making the alterations that are found in the second, or book of 1552 (Strype, *Mem.* iv. 20; Dixon, iii. 249). Cox ceased to be royal tutor at the beginning of 1550 (*Orig. Lett.* p. 82), but he retained his post of almoner, and was raised to the deanery of Westminster (22 Oct. 1549), vacant by the death of the unfortunate Benson. From 21 May 1547 till 14 Nov. 1552 he was chancellor of the university of Oxford. He was a great harbourer of the foreign divines, and seems to have had the main hand in introducing such men as Peter Martyr, Stumphius, and John ab Ulmis into the university. In 1549 he was one of the seven royal visitors or delegates who swept the schools and colleges with the most destructive zeal, confiscating and converting funds, altering statutes, destroying books and manuscripts with unsparing fury. The 'mad work,' as Wood calls it, that he made procured for the chancellor the reproachful nickname of the cancellor of the university (Wood, *Hist. et Ant.* p. 270; Fuller; Macray, *Bodleian*; Dixon, iii. 101, 108). On this occasion he presided as moderator at the great disputation of four days, which was held between Peter Martyr and the Oxford schoolmen, Tresham, Chedsey, and Morgan (Strype, *Cranmer*; Dixon, iii. 116). He was said to have frequently interposed to help Martyr (Sanders). Next year he was sent by the council into Essex to appease the people, who were excited by the resistance of Bishop Day of Chichester to the turning of altars into tables (Harman, *Specimen*, p. 113). In 1551 he was among the adverse witnesses

on the trial of Gardiner (Foxe, 1st ed.), and in the same year we find him engaged in a renewed and equally destructive visitation of Oxford (Dixon, iii. 384). During the same period he was upon the several commissions that were issued for revising the ecclesiastical laws, which at last resulted in the abortive code of the 'Reformatio Legum Ecclesiasticarum' (Strype, *Cranmer*, ii. ch. xxvi.; Dixon, iii. 351, 439). On the death of Edward, Cox was apprehended (5 Aug. 1553) on suspicion of being concerned in Northumberland's plot (*Orig. Lett.* p. 684; *Grey Friars' Chron.* p. 82). He spent a few weeks in the Marshalsea, and was deprived of all his preferments. In May 1554 he made his way to the continent, choosing Frankfort for his place of exile, where he arrived 13 March 1554–5. The English congregation in that city had adopted, by the advice of Whittingham, a form of service that differed widely from the prayer-book, and accepted the Calvinistic doctrine. Most of the morning prayers were omitted, the confession was changed for another, the responses were not repeated, the surplice was not worn. At the same time, with the view of making Frankfort, as the nearest to England, the head of the English church colonies, ministers were invited from the other congregations; and from Strasburg came Haddon, Lever from Zurich, from Geneva Knox. The celebrated 'Troubles of Frankfort' were now begun. Knox soon stood at the head of the party which desired further alteration, while the moderate party were supported by the exiles of Strasburg and Zurich. After the English service had been submitted by Knox to Calvin, and treated by Calvin with contempt, a compromise to last four months was effected by which the rival forms of worship were used alternately. Things were in this posture when, before the expiration of the four months, Cox arrived upon the scene. He immediately exhorted his countrymen to maintain the Book of Common Prayer as it had been established in the reign of Edward VI. Knox replied by attacking Cox as a pluralist. The rival parties were thenceforth distinguished by the names of Knoxians and Coxians, and became so embittered in their animosity as to require the interposition of the magistrates of the city to prevent them from coming to blows. The Knoxians at first obtained from these authorities a decision that the services should be after the French or Calvinistic model; but their triumph was brief. In one of Knox's sermons his adversaries discovered treason against the emperor. They accused him to the magistrates, and the state of Frankfort expelled him and his followers from its territory (26 March 1555). The English service of Edward was then restored (*Troubles at Frankfort*; Fuller; Heylyn). It does not appear that Cox held any office in the church after this pacification. He apparently spent some time at Strasburg; but in a subsequent dispute which was waged at Frankfort with great bitterness between Horn, the deprived dean of Durham, and Ashley, an eminent member of the congregation, he was chosen by the magistrates to be one of the arbiters, and succeeded in bringing the contending parties to a tolerable agreement.

When Elizabeth came to the throne, Cox was at Worms. He returned to England; preached frequently before the queen; was appointed visitor of the university of Oxford (5 June 1559), and on 28 July 1559 was placed in the see of Ely. It was at first determined to give him the see of Norwich, and the change was made after he had been actually elected to that see. At Ely he remained twenty-one years. He refused to minister in the queen's chapel because of the crucifix and lights there, and justified himself in a letter to her majesty (Strype, *Ann.* App. i. 23). He was considered severe towards the Romanists in his custody, especially in 1577 when Feckenham, the former abbot of Westminster, was his prisoner. John Leslie, bishop of Ross, was in his custody from 14 May till 17 Oct. 1571. In 1579 several accusations were brought against him and his wife by Lord North and others for covetous and corrupt practices (*ib.* App. bk. i.). He seems to have vindicated himself successfully, but he was compelled to cede a manor to his chief accuser North. He had already ceded much property belonging to his see to the crown (1562), and in 1575 Sir Christopher Hatton used the queen's influence to induce Cox to give him his palace in Holborn. Cox resisted, but ultimately yielded. Disgusted with the court, Cox petitioned for permission to resign his see, and this request was granted in February 1579–80. He received a pension of 200*l.* and the palace of Doddington. Cox died on 22 July 1581. Twenty years after his death an elaborate monument, erected to his memory in Ely Cathedral, was defaced, because, it was said, of his evil memory (Willis, *Cathedrals*, iii. 359). Cox married twice: first while dean of Christ Church, and secondly about 1568. His second wife was Jane, daughter of George Auder, alderman of Cambridge, and widow of William Turner, dean of Wells. His children were John; Sir Richard of Brame, Ely; Roger; Joanna, widow of John, eldest son of Archbishop Parker; and Rhoda. The executors of his will, dated 20 April 1581, were Archbishop Grindal,

Thomas Cooper, bishop of Lincoln, John Parker, archdeacon of Ely, his son John, and Richard Upchare. Cox translated the Acts and St. Paul's Epistle to the Romans for the bishops' Bible, and published 'Articles to be inquired of . . . in his Visitations' in 1573 and 1579. Manuscript tracts and letters on church policy are in the British Museum, and many are printed in Strype's 'Annals' and Burnet's 'History of the Reformation.' A notebook is in Corpus College library at Cambridge. Portraits are at King's College and Trinity Hall, Cambridge.

[Authorities cited above; and Cooper's Athenæ Cantab. i. 437–445, where the fullest account is to be found.] R. W. D.

COX, Sir RICHARD (1650–1733), lord chancellor of Ireland, son of Captain Richard Cox and Katherine, his wife, the daughter of Walter Bird of Clonakilty, co. Cork, and widow of Captain Thomas Batten, was born at Bandon on 25 March 1650. Losing both his parents before he was three years of age, he was left to the care of his grandfather and his 'good unkle, John Birde,' seneschal of the manor court of Bandon. He was educated at the school at Clonakilty, and after spending 'three years idely' he commenced practising as an attorney in the manor courts. Not being satisfied with his position, he realised the little property which had been left him by his grandfather, and came up to London. He was admitted a student at Gray's Inn in September 1671, and was called to the bar on 9 Aug. 1673. Refusing an advantageous offer from Sir Francis Ratcliffe, he returned to Ireland, and on 26 Feb. 1674 married Mary, the daughter of John Bourme, 'she being,' as he relates, 'but 15, and I not full 24 years old; this was the rock I had like to split upon, for though she proved a very good wife, yet being disappointed in her portion, which was ill paid by her mother and by driblets, and from whom I also received some other unkindnesses, I retired into the country and lived at Cloghnikilty for 7 yeares, but very plentifully and pleasantly.' At length finding it necessary to bestir himself in order to provide for his increasing family, Cox removed to Cork, where he began practising at the bar, and was appointed recorder of Kinsale. On the accession of James II, Cox, who as a zealous protestant had made a public attack upon the catholics while presiding at the Cork quarter sessions, thought it prudent to come to England. He thereupon settled with his family at Bristol, where he 'fell into good practice,' and employed his leisure time in writing his 'Hibernia Anglicana; or the History of Ireland from the Conquest thereof by the English to this Present Time. With an introductory discourse touching the ancient state of that kingdom.' The first part of this book appeared soon after the revolution in 1689, and the second part in the following year, a second edition appearing in 1692. Upon the arrival of the Prince of Orange, Cox went up to London, and there showed his zeal for the revolution by publishing 'A Sheet of Aphorisms, proving by a fair deduction the necessity of making the Prince of Orange king, and of sending speedy relief to Ireland.' A copy of this was presented by him to every member who entered the house on the first day of the convention. He afterwards published a half-sheet entitled 'A Brief and Modest Representation of the Present State and Condition of Ireland.' Declining the offer of the post of secretary to the Duke of Schomberg, he accepted that of secretary to Sir Robert Southwell, whom he accompanied to Ireland. He was present at the battle of the Boyne, where the accuracy of his information was of considerable assistance to William. The Declaration of Finglas, which was issued upon the king's arrival at Dublin, was wholly written by Cox, William having refused to alter the draft, for he said that 'Mr. Cox had exactly hit his own mind.' On the surrender of Waterford, Cox was made recorder of that city, and not long afterwards, on 15 Sept. 1690, was sworn second justice of the common pleas. After serving on two commissions of oyer and terminer he was appointed military governor of Cork in 1691. With great promptness he raised eight regiments of foot and three of cavalry, and issued a proclamation that all papists were not 'to be out of their dwellings from nine at night till five in the morning, or to be found two miles from their places of abode, except in a highway to a market town, and on market days, or to keep or conceal arms or ammunition, on pain of being treated as rebels.' During his governorship, which lasted until the reduction of Limerick, Cox successfully protected a frontier of eighty miles long, and at the same time was able to send assistance to General Ginkel. For these services he was admitted a member of the privy council on 13 April 1692, and was knighted by Lord Sydney, the lord-lieutenant, on 5 Nov. following. In February 1693 he was appointed one of the commissioners of forfeitures. Though far from being prejudiced in favour of the Roman catholics, he insisted that they were in justice entitled to the benefit of the articles of Limerick. These views gave great displeasure to many of the more violent protestants. He was in consequence removed from the council in June 1695, and the com-

mission of forfeitures was dissolved, its duties being transferred to the commissioners of the revenue. In 1696 he went over to England for the recovery of his health. About this period he wrote 'An Essay for the Conversion of the Irish,' and the tract entitled 'Some Thoughts on the Bill depending before the Rt. Hon. the House of Lords for prohibiting the Exportation of the Woollen Manufactures of Ireland to Foreign Parts. Humbly offered to their Lordships' (Dublin, 1698, 4to) is also attributed to him. Upon the death of Sir John Hely in April 1701 Cox was appointed chief justice of the common pleas, and being sworn in on 16 May was a few days afterwards readmitted to the privy council.

On the accession of Anne he was summoned to London 'to consult about the future parliament' and other Irish matters. Though he strongly urged that 'it was for the interest of England to encourage the woollen manufacturers in Ireland in the coarse branches of it,' and boldly stated that he 'thought it was the most impolitic step which was ever taken by England to prohibit the whole exportation of woollen manufactures from Ireland,' the ministers felt unable to act on his advice. On his leaving England the queen presented him with 500*l.* for the expenses of his journey. In July 1703 Cox was nominated lord chancellor of Ireland in the room of John Methuen, appointed ambassador at Lisbon, and on 6 Aug. he took the oaths of office. In the first session of the new parliament, for which he issued the writs a few days after entering upon office, the 'Act to prevent the further Growth of Popery' was passed without, it is strange to say, a dissentient voice in either house in spite of the protests of counsel who were heard at the bar on behalf of the Roman catholics. On 4 Dec. 1703 he was presented with the freedom of the city of Dublin, and in the following year, owing to his recommendation, an English act was passed, authorising the exportation of Irish linen to the plantations. He was created a baronet on 21 Nov. 1706. During the absence of the lord-lieutenant from Ireland Cox several times acted as one of the lords justices. His refusal to allow an election by the privy council of a new lord justice on the death of his colleague, Lord Cutts, gave rise to considerable contention; but his action was upheld by the English legal authorities. Upon the appointment of the Earl of Pembroke to the post of lord-lieutenant, Cox was removed from the chancellorship 30 June 1707, and Chief Baron Freeman appointed in his place. During his retirement from public life he devoted himself chiefly to the study of theology, and in 1709 published 'An Address to those of the Roman Communion in England, occasioned by the late Act of Parliament to prevent the growth of Popery, recommended to those of the Roman Communion in Ireland upon a late like occasion.' He also wrote about this time 'An Enquiry into Religion, and the Use of Reason in reference to it,' pt. i. (London, 1713, 8vo), which apparently was never completed. In 1711 he was appointed chief justice of the queen's bench; but on the death of Anne was, with other judges, removed from the bench, as well as from the privy council. His dismissal seems to have been chiefly owing to his refusal to comply with the directions of the lords justices of England in regard to the election of the lord mayor of Dublin. A number of resolutions were passed in the Irish House of Commons censuring the late chief justice, his conduct in his judicial capacity was impugned, and insinuations were made that he had espoused the cause of the Pretender. The latter charge was destitute of any foundation, and the others falling to the ground upon investigation no further proceedings were taken against him. Giving up all thoughts of further public life he retired into the country. In April 1733 he was seized with a fit of apoplexy, from the effects of which he died on 3 May following, in his eighty-fourth year. By his wife, who predeceased him on 1 June 1715, he had a numerous family. Cox was a strictly honest, upright man, with considerable energy of purpose, and when his mind was not warped, as it too often was, by anti-catholic prejudices, a thoroughly just administrator. His writings have little or no reputation, his chief work being the 'History of Ireland,' which is a mere hurried compilation. He was also the author of the 'Remarks upon Ireland,' which were printed in Bishop Gibson's translation of Camden's 'Britannia' (1695), and appears to have composed some pieces of poetry on General Ginkel's success in Ireland and the death of Lord-chancellor Porter. The latter piece was the means of eliciting the rebuke from Sir Robert Southwell, 'that poetry was not the way to preferment, but a weed in a judge's garden.' He was succeeded in the title by his grandson Richard, who established a linen manufactory at Dunmanway, co. Cork, near the family seat. It was he who wrote the letter (dated Dunmanway, 15 May 1749) to Thomas Prior, 'shewing from experience a sure method to establish the linen manufacture, and the beneficial effects it will immediately produce,' which is erroneously attributed to his grandfather by Watt. The baronetcy is supposed to have become extinct on the death of Sir Francis Hawtrey Cox, the twelfth baronet, in 1873; but the title is

claimed by the Rev. Sir George William Cox, vicar of Scrayingham. The portrait of the first Sir Richard Cox, which was presented by himself, is still to be seen in the dining hall of the hospital at Kilmainham.

[Autobiography of the Rt. Hon. Sir Richard Cox, Bart., lord chancellor of Ireland, from the original manuscript preserved at the 'Manor House, Dunmanway,' co. Cork (ed. Caulfield), 1860; Harris's History of the Writers of Ireland, book i. 207–52, contained in his Translation of Sir J. Ware's History and Antiq. of Ireland, ii. 1764; Biog. COX, ROBERT (1810–1872), author of several important works on the Sabbath question, was the son of Robert Cox, leather-dresser, of Gorgie Mills, near Edinburgh, and of Anne Combe, a sister of George and Dr. Andrew Combe [q. v.] He was born at Gorgie on 25 Feb. 1810, and received his early education at a private school and at the high school of Edinburgh. Besides attending the classes of law and of general science at the university of Edinburgh, he also studied anatomy under the not too reputable Dr. Robert Knox. For some years he was in the legal office of his uncle, George Combe, who so highly estimated his character and abilities that he wished him to become partner with him in the business, but Cox declined. He passed as a writer to the signet, but never went into general business, limiting himself to that pressed upon him by his family and friends, and occupying himself chiefly with scientific and literary matters, and with schemes for the general benefit of the community. He was the active editor of Combe's 'Phrenological Journal' from Nos. xxxiv. to l. of the first series, to which he also contributed many able articles. At about the age of twenty-five he accepted the secretaryship of a literary institution in Liverpool, but resigned it in 1839 from considerations of health, and returned to Edinburgh. Soon after his return he was induced by the Messrs. Black to undertake the compilation of the index to the seventh edition of the 'Encyclopædia Britannica.' In 1841 he also resumed the editorship of the 'Phrenological Journal;' but the issue ceased in 1847, on the death of Dr. Andrew Combe, of whom he contributed a memoir to the last number.

The attention of Cox was first directed to the Sabbath question by the action of the Edinburgh and Glasgow Railway Company, in withdrawing a limited passenger service in connection with their Sunday trains. Having qualified as a shareholder, he attended two half-yearly meetings of the company in 1850, at each of which he moved that to the Sunday trains which were being regularly run passenger carriages should be attached. The substance of his speeches he formed into a small pamphlet, addressed to the directors, and entitled 'A Plea for Sunday Trains.' As the result of subsequent reading and study, it was afterwards expanded into an octavo volume of 560 pages, published in 1853 under the title of 'Sabbath Laws and Sabbath Duties; considered in relation to their Natural and Scriptural Grounds, and to the Principles of Religious Liberty.' Having accumulated during his reading a mass of material beyond the scope of this publication, he continued still further his studies and researches on the subject, and published in 1865 'The Literature of the Sabbath Question,' in two volumes, a work equally remarkable for its minute erudition and its lucid exposition of somewhat dull and entangled controversies. In 1860 he published 'The Whole Doctrine of Calvin about the Sabbath and the Lord's Day, extracted from his Commentaries,' and in 1863 'What is Sabbath Breaking? a Discussion occasioned by the Proposal to open the Botanical Gardens of Edinburgh on Sunday Afternoons.' He also contributed the chief portion of the article 'Sabbath' to 'Chambers's Encyclopædia.' He assisted his brothers Dr. Abram Cox of Kingston and Sir James Cox or Coxe, one of her majesty's commissioners in lunacy, in the revisal of reissues of Dr. Combe's popular physiological works, and those of George Combe's books specially dealing with the brain and nervous system. In 1869 he edited, along with Professor Nicol of Aberdeen, the 'Select Writings' of Charles Maclaren, editor of the 'Scotsman.'

Especially fond of pedestrian exercise, Cox took an active part in the Right of Way Association, and was one of the parties to the action against the Duke of Athole, by which Glen Tilt was reopened to the public. A liberal in politics as well as in intellectual matters, he interested himself in every important social and philanthropic movement of an unsectarian kind connected with Edinburgh. He was practically the manager of the Phrenological Museum, a director and warm supporter of the United Industrial School, a director of the School of Arts, and an active promoter of university endowment and of schemes connected with the higher education of the country. He was a liberal

patron of art, and a member of the Edinburgh Association for Promotion of the Fine Arts. Privately he secured the attachment of many friends, who, while they respected his abilities and his somewhat stern sense of justice, were attracted by his genial qualities and his considerate kindness of heart. He died, unmarried, on 3 Feb. 1872.

[Scotsman, 5 Feb. 1872; Charles Gibbon's Life of George Combe, 1878.] T. F. H.

COX, THOMAS (*d.* 1734), topographer and translator, a master of arts, became rector of Chignal-Smealy, near Chelmsford, on 19 June 1680, and continued there until 1704. He was next preferred to the vicarage of Broomfield, Essex, on 11 Feb. 1685, and to the rectory of Stock-Harvard in the same county on 24 Feb. 1703, which livings he held until his death. He was also lecturer of St. Michael's, Cornhill, but resigned the appointment in 1730 (*Daily Journal*, 5 June 1730). He died on 11 Jan. 1733-4 (*Gent. Mag.* iv. 50). Newcourt's statement that he is the same with the Thomas Cox who held the vicarage of Great Waltham, Essex, from 1653 to 1670, is unsupported. Besides an assize sermon, 'The Influence of Religion in the Administration of Justice,' 4to, London, 1726, Cox published anonymously translations of two of Ellies-Dupin's works, which he entitled 'The Evangelical History, with additions,' 8vo, London, 1694 (third edition, 8vo, London, 1703-7), and 'A Compendious History of the Church,' second edition, 4 vols. 12mo, London, 1716-15. He likewise translated Plutarch's 'Morals by way of Abstract done from the Greek,' 8vo, London, 1707, and Panciroli's 'History of many Memorable Things Lost,' 2 vols. 12mo, London, 1715 (with new title-page, 12mo, London, 1727). The lives of Richard II, Henry IV, Henry V, and Henry VI in Kennett's 'Complete History of England' are also from his pen. But his chief and best-known undertaking was 'Magna Britannia et Hibernia, antiqua et nova. Or, a new Survey of Great Britain, wherein to the Topographical Account given by Mr. Cambden and the late editors of his Britannia is added a more large History, not only of the Cities, Boroughs, Towns, and Parishes mentioned by them, but also of many other Places of Note and Antiquities since discovered. . . . Collected and composed by an impartial Hand,' 6 vols. 4to; in the Savoy, 1720-31. Gough (*British Topography*, i. 33, 34) says that this work was originally published in monthly numbers as a supplement to the five volumes of 'Atlas Geographus,' 1711-17. It contains only the English counties. The introduction or account of the ancient state of Britain was written by Dr. Anthony Hall, who also contributed the account of Berkshire. Prefixed to each county is a map by Robert Morden. Altogether, it is a compilation of much merit (*Notes and Queries*, 6th ser. vii. 69, 338). Cox married Love, fifth daughter of Thomas Manwood of Lincoln's Inn and Priors in Broomfield, Essex.

Cox's son, Thomas, besides succeeding him in the rectory of Stock, was rector of Chignal-Smealy (1714-1735), and rector of Ramsden-Bellhouse (27 Sept. 1733), and died on 26 July 1763 (*Gent. Mag.* xxxiii. 415). From a sermon he published in 1712 on 'The Necessity of a Right Understanding in order to True Wisdom,' we learn that he had been educated at the grammar school of Bishops Stortford, Hertfordshire, under Dr. Thomas Took.

[Morant's Essex, i. 204, ii. 52, 77, 78, 82; Wright's Essex, i. 188; Newcourt's Repertorium, ii. 96, 139, 633.] G. G.

COX, WALTER (1770-1837), Irish journalist, was the son of a Westmeath blacksmith, who apprenticed him to a gunsmith in Dublin. For some time he carried on business as a gunsmith, and in 1797 started a newspaper called 'The Union Star' in the interest of the United Irishmen, in which a policy of assassination was advocated. In 1804 he went to America, but returned to Ireland, and founded in 1807 the 'Irish Magazine and Monthly Asylum for Neglected Biography.' The tone of this periodical being regarded as seditious by the government, he was frequently prosecuted, and spent much of his time in gaol. Nevertheless it continued to appear with regularity until 1815, when he accepted a pension of 100*l.* per annum and a bonus of 400*l.*, on condition that he should surrender all copies of it in his possession and emigrate to America. In 1816 he landed at New York, where he started a journal called 'The Exile,' of a somewhat similar character to the 'Irish Magazine.' This enterprise not succeeding, he crossed to France in 1820, and subsequently returned to Ireland, where his presence being discovered in 1835 his pension was forfeited. He died on 17 Jan. 1837 in poverty. Before leaving America he had given expression to his dissatisfaction with the institutions of the United States in a pamphlet entitled 'The Snuff Box.' During his residence in that country he is said to have been successively pawnbroker, chandler, dairyman, and whisky dealer. He stated in 1810 that his hostility to the English government arose in part from 'atrocious indignities' to which his father had been subjected by Lord Car-

hampton, and that on a reward being offered for the apprehension of the editor of the 'Union Star' (published anonymously) he discovered himself to the authorities at Dublin Castle, and made terms with them. He was accused by a rival editor of receiving government pay, and of having betrayed Lord Edward Fitzgerald.

[Madden's United Irishmen; Webb's Compendium of Irish Biography; Froude's English in Ireland, iii. 269; Irish Magazine and Monthly Asylum for Neglected Biography.] J. M. R.

COX, WILLIAM SANDS (1802-1875), surgeon, founder of Queen's College, Birmingham, was the eldest son of E. T. Cox, a well-known Birmingham surgeon (1769-1863). After education at King Edward VI's Grammar School, and at the General Hospital, Birmingham, he studied at Guy's and St. Thomas's Hospitals, London (1821-3), and the École de Médecine, Paris (1824). Having conceived the idea of establishing a school of medicine in Birmingham, on the model of his friend Grainger's in London, he visited numerous schools and hospitals on the continent and in Great Britain. On settling in Birmingham in 1825 he was appointed surgeon to the General Dispensary, and commenced to lecture on anatomy, with physiological and surgical observations, on 1 Dec. 1825, at Temple Row. In 1828, after a good deal of opposition, he, in conjunction with Drs. Johnstone, Booth, and others, founded the Birmingham School of Medicine, himself lecturing on anatomy at first and afterwards on surgery. In 1834 he took an active part in the formation of the Provincial Medical and Surgical (now the British Medical) Association. In 1836 he was elected F.R.S. In 1840-1 he founded the Queen's Hospital, Birmingham, and by his sole exertions it was opened free of debt, and he was naturally appointed senior surgeon. Having secured considerable contributions from the Rev. Dr. Warneford, he was able to enlarge the scope of the medical school to that of a college, with instruction in arts (1847) and theology (1851), and he secured for it in 1843 a royal charter by the title of Queen's College. In 1857 a sum of 1,050*l.* was publicly subscribed as a testimonial to Cox, which he devoted to founding scholarships and to completing the museums of Queen's College. In 1858-1859 he was principal of the college. Cox aimed at making the college the nucleus of a midland university, but unfortunately 'he was autocratic in his mode of conducting both institutions, and as his administrative faculty was by no means equal to his creative power, and to the readiness with which he gave and obtained money, the college and hospital both became involved in a succession of serious quarrels between the founder and his associates' (*Birmingham Daily Post*, 28 Dec. 1875). These greatly injured the reputation of the college; the buildings were ill-planned, and the students' rents and other expenses high. An inquiry by the charity commissioners in 1860 led to the severance of the college and hospital, after which Cox ceased to take part in the work of either. He left Birmingham in 1863, on his father's death, and lived successively at Bole Hall, near Tamworth, at Leamington, and at Kenilworth, where he died on 23 Dec. 1875.

Cox was unquestionably disinterested. He was a strong conservative and churchman, and this hindered his success in Birmingham. He was a skilful surgeon, but sacrificed much practice to his public projects.

Besides numerous articles in the 'London Medical Gazette,' Cox published 'A Synopsis of the Bones, Ligaments, and Muscles, Blood-vessels, and Nerves of the Human Body,' 1831; a translation of Maingault on amputations, 1831; a letter to J. T. Law on establishing a clinical hospital at Birmingham, 1849; 'A Memoir on Amputation of the Thigh at the Hip Joint,' 1845; a reprint of the charter, &c., of Queen's College, 1873; and 'Annals of Queen's College,' 4 vols. 1873.

Contrary to expectation, Cox left nothing to the institutions he had founded, but bequeathed 3,000*l.*, with his medical library and instruments, to the cottage hospital at Moreton-in-the-Marsh, 12,000*l.* to establish and support dispensaries in several suburbs of Birmingham, 3,000*l.* each to build and endow a dispensary at Tamworth and Kenilworth, money to endow scholarships at King Edward's School, Birmingham, and Guy's Hospital, London, besides money to complete and endow a church he had built in Birmingham.

[Birmingham Daily Post, 28 Dec. 1875, 3 Jan. 1876; Lancet, 15 April 1876, p. 586; Annals of Queen's College; Photographs of Eminent Medical Men, Barker, 1865, i. 61, reprinted in Annals of Queen's College, iv. 155-60.] G. T. B.

COXE, FRANCIS (*fl.* 1560), a quack physician, who attained some celebrity in the sixteenth century, is best known by a curious volume of receipts entitled 'De oleis, unguentis, emplastris, etc. conficiendis,' London, 1575, 8vo. His practices having attracted considerable attention, he was summoned before the privy council on a charge of sorcery, and, having been severely punished, made a public confession of his 'employment of certayne sinistral and divelysh artes' at the Pillory in Cheapside on 25 June 1561. On

7 July following John Awdeley issued a broadside entitled 'The unfained Retractation of Fraunces Cox,' a copy of which is in the library of the Society of Antiquaries (LEMON, *Cat. Broadsides*, p. 16). Coxe subsequently published a grovelling and terror-stricken pamphlet entitled 'A Short Treatise declaring the Detestable Wickednesse of Magicall Sciences, as Necromancie, Coniurations of Spirits, Curiouse Astrologie, and such lyke' (London, Jhon [*sic*] Alde, n.d., black letter, 12mo), written, as he says in the preface thereto, 'for that I have myself been an offender in these most detestable sciences, against whome I have compilyd this worke.' The dates of his birth and death are not known.

[Coxe's Works.] E. H.-A.

COXE, HENRY OCTAVIUS (1811-1881), Bodley's librarian, eighth son of the Rev. Richard Coxe, was born at Bucklebury, Berkshire, 20 Sept. 1811. He was educated at Westminster, and under his elder brother Richard, then a curate at Dover. He entered Worcester College, Oxford, as a commoner in 1830. Here he worked hard, both in the classical school and on the river; but an accident forced him to content himself with the ordinary pass degree in 1833. While still an undergraduate he had been invited to enter the manuscript department of the British Museum, which he joined in May 1833. Soon after this he took orders, and was for two years curate of Archbishop Tenison's Chapel, and subsequently for two more years of St. Martin's-in-the-Fields, adding to his work in the museum zealous exertions among the London poor. In 1838 he was appointed an under-librarian at the Bodleian, where he spent the rest of his life, and was so devoted to his work that for the first thirty years he never once drew the full six weeks of his statutory vacation. The year after his appointment he married Charlotte, daughter of General Sir Hilgrove Turner, by whom he had five children, only two of whom survived him. His eldest son, William (Balliol College, Boden Sanscrit scholar, and assistant in the department of Egyptian and Assyrian antiquities in the British Museum), died in 1869, aged 29. In 1860 he succeeded Dr. Bandinel [q. v.] as chief librarian. As an under-librarian he was sent by Sir G. C. Lewis, then chancellor of the exchequer, in 1857, to examine the religious houses of the Levant, with a view to further discoveries of manuscripts, such as those which had rewarded the explorations of Tattam and Curzon. Coxe found a number of important codices at Cairo, Jerusalem, and Patmos, but the value of such treasures had unfortunately become known even to their ignorant owners, and the monks would not listen to any proposals for their purchase. A fever compelled his return home before he had been able to visit Mount Athos, but the results of his researches were already of considerable value, and appeared in an official report in 1858 (reissued 1880). This was the chief voyage of his life; but in his closing years he accompanied his daughter and her husband, the Rev. John Wordsworth (now, 1887, bishop of Salisbury), in several visits to Italy. During these journeys he was already suffering from the painful disease which, after seven years of suffering, bravely borne, caused his death (8 July 1881).

Coxe was at once a fine palæographer and editor of manuscripts, a hardworking country parson, and an admirable librarian. The catalogue of the Greek manuscripts at the Bodleian and that of the manuscript collections of the several Oxford colleges are his best known and the most generally useful works. He held successively various curacies in the neighbourhood of Oxford: Culham, 1839-48; Tubney, 1848-55; Yarnton, 1855; and in 1856 Wytham, of which in 1868 he became rector. He had a real gift for parish work, and was greatly beloved by his parishioners. He was also select preacher to the university in 1842, and Whitehall preacher 1868; in 1878 he presided at the first annual meeting of the Library Association at Oxford. As a librarian of the good old scholarly type he was helpful in the highest degree, and an inimitable guide to his library. The gigantic catalogue, in 723 folio volumes (each slip in triplicate), was compiled during his tenure of office between 1859 and 1880. He never suffered his private work to encroach upon his official time, and avoided interference in academic controversy, lest it might lead to the intrusion of party spirit into the management of the library. He showed perfect tact and consideration for his subordinates, who respected his authority the more because it was exerted without fuss or self-importance, and with a genial air of *camaraderie*. His personal charm was due to a rare combination of playfulness, dignity, and old-fashioned courtesy; and his wit and stores of anecdote were equally remarkable. He was an honorary member of the common rooms of Corpus and Worcester colleges, a chaplain of Corpus, a delegate of the press, and curator of the university galleries. His social powers and his unaffected sweetness of character made him a welcome guest in all society.

His published works are: 1. 'Forms of Bidding Prayer, with introduction and notes,' Oxford, 8vo, 1840. 2. 'Rogeri de Wendover

Chronica sive Flores Historiarum cum appendice,' 5 vols. 8vo (Eng. Hist. Society), 1841–4. 3. 'The Black Prince, an Historical Poem, written in French by Chandos Herald, with a translation and notes' (Roxburghe Club), 4to, 1842. 4. 'Poema quod dicitur Vox Clamantis, auctore Joanne Gower' (Roxburghe Club), 4to, 1850. 5. COXE or COCKIS, JOHN (*fl.* 1572), translator, probably of Brasenose College, Oxford, where one of his name was allowed to determine Michaelmas term 1546, and determined 1547 (Boase, *Registrum Univ. Oxon.*), or, Wood says, possibly a student of Christ Church in 1555, translated Bullinger's 'Questions of Religion cast abroad in Helvetia by the Adversaries of the same . . . reduced into XVII Commonplaces' (black letter); H. Bynneman for G. Byshop, London, 1572, 8vo, in the British Museum; also his 'Exhortation to the Ministers of God's Worde in the Church of Christ;' John Alde, London, 1575 (Wood; Ames); and 'A Treatise on the Word of God by Anth. Sadull, written against the Traditions of Men,' printed for John Harison,' 1583, 8vo (Maunsell).

[Boase's Registrum Univ. Oxon. (Oxford Hist. Soc.), 213; Wood's Fasti (Bliss), i. 123; Tanner's Bibl. Brit. 205; Ames's Typogr. Antiq. (Herbert), 890, 972, 1156; Maunsell's Catalogue, 25, 94.] W. H.

COXE, PETER (*d.* 1844), poet, was a son of Dr. Coxe, physician to the king's household in the reign of George II, and a brother of the Venerable William Coxe, archdeacon of Wiltshire [q. v.] He was educated at Charterhouse School, which he entered at the age of ten on a presentation from George II, performed by George III, and left when only thirteen. He followed the business of an auctioneer in London, but having obtained a competency spent his later years in retirement. He was the author of an anonymous poem published in 1807, entitled 'Another Word or Two; or Architectural Hints in Lines to those Royal Academicians who are Painters, addressed to them on their re-election of Benjamin West, Esq., to the President's Chair;' of a political tractate published in 1809, entitled 'The Exposé; or Napoleon Buonaparte unmasked in a condensed statement of his Career and Atrocities;' and of 'The Social Day, a Poem in four Cantos,' published in 1823. He died 22 Jan. 1844.

[Gent. Mag. 1844, new ser. xxii. 652–3; Brit. Mus. Cat.] T. F. H.

COXE or COX, RICHARD (*d.* 1596), divine, matriculated as a pensioner of Christ's College, Cambridge, on 27 Nov. 1578, proceeded B.A. 1581–2, and on 16 Dec. 1583 was incorporated in that degree at Oxford, where he proceeded M.A. 1584 as a member of Gloucester Hall. On 17 May 1589 he was instituted to the rectory of Diss, Norfolk, on the presentation of Henry, earl of Sussex, but the earl's right being disputed, Coxe was ejected and an incumbent whom the earl had previously ejected re-entered. In November 1591 Coxe was reinstated, but before long was again turned out. At last, having obtained the queen's letters patent to void all other presentations, he was, on 2 Dec. 1593, instituted to the rectory for the third time, and held it until his death, which took place in 1596. He wrote 'Richard Coxe, his Catechisme,' printed by T. Orwin, 1591, 8vo, and, Wood believed, also published some sermons.

[Cooper's Athenæ Cantab. ii. 222; Wood's Fasti (Bliss), i. 225; Blomefield's Norfolk, i. 18; Ames's Typogr. Antiq. (Herbert), p. 1247.] W. H.

COXE, RICHARD CHARLES (1800–1865), archdeacon of Lindisfarne, was born in 1800, and educated at Norwich grammar school. He was elected scholar of Worcester College, Oxford, in 1818, and graduated B.A. in 1821 and M.A. in 1824. He was ordained deacon in 1823, and priest in the following year. After for some time acting as chaplain of Archbishop Tenison's chapel, Regent Street, London, he obtained in 1841 the vicarage of Newcastle-on-Tyne. In 1843 he was appointed honorary canon of Durham. From 1845 till he left Newcastle he received an an-

nual supplement of five hundred guineas to his income, subscribed by his parishioners. In 1853 he obtained the archdeaconry of Lindisfarne with the vicarage of Eglingham annexed, and in 1857 he was appointed canon of Durham. He died at Eglingham vicarage, Northumberland, 25 Aug. 1865. Coxe enjoyed a high reputation as an eloquent preacher, and was a strenuous opponent of latitudinarianism in doctrine and practice, as well as a strong upholder of the rights and privileges of the clergy. His untiring energy is evidenced in his voluminous publications, the quantity of which has probably to some extent aided to modify their quality. Besides numerous single sermons and addresses he was the author of the following theological works: 'Lectures on the Evidences from Miracles,' 1832; 'Practical Sermons,' 1836; 'Death disarmed of its Sting,' 1836; 'The Symmetry of Divine Revelation a Witness to the Divinity of Christ,' 1845; and 'Remorse: Remorse for Intellectual and Literary Offences: Retribution,' 1864. He also published 'Six Ballads,' 1842; 'The Mercy at Marsdon Rocks,' 1844; 'Poems, Scriptural, Classical, Miscellaneous,' 1845; 'The Snow Shroud, or the Lost Bairn o' Biddlestone Edge,' 1845; 'Leda Tanah, the Martyr's Child; Derwent Bank,' 1851; 'Woodnotes: the *Silvitudia* of M. Casimir Surbievius, with a translation in English verse; Musings at Tynemouth, ten sonnets; North and South, ten sonnets,' 1848; and 'Ballads from the Portuguese' in the second part of Adamson's 'Lusitania Illustrata.' He married Louisa, daughter of Rev. J. Maule of Dover, and left a daughter and two sons.

[Gent. Mag. xiv. new ser. (1865), pp. 513–14; Men of the Time, 6th ed.; Latimer's Local Records of Northumberland and Durham; Brit. Mus. Cat.]

COXE, THOMAS, M.D. (1615–1685), physician, a native of Somersetshire, was educated at Emmanuel College, Cambridge, where he graduated B.A. 1635, M.A. 1638. He took his M.D. degree, like Harvey, at Padua 12 Dec. 1641, and was afterwards incorporated at Oxford. He became a fellow of the College of Physicians 25 June 1649. In 1660 he delivered the Harveian oration, but did not print his composition. From 1676 to 1680 he was treasurer of the college, and in 1682 was elected president. He was one of the first list of fellows nominated by the council of the Royal Society in 1662. Of his practice nothing is known but that he was physician in the army of the parliament during the rebellion, and that at the bedside of Sydenham's brother he suggested the profession of physic to him, who became the greatest of English physicians. Coxe fell into difficulties in his old age, and flying from his creditors died of apoplexy in France in 1685.

[Munk's Coll. of Phys. 1878, i. 247; Wood's Athenæ Oxon.; Thomson's History of the Royal Society, 1812, p. 3.] N. M.

COXE, WILLIAM (1747–1828), historian, born 7 March 1747, in Dover Street, Piccadilly, was the son of Dr. William Coxe, physician to the king's household. He was sent to the Marylebone grammar school when five years old, and in 1753 to Eton. In 1764 he was elected to King's College, Cambridge, of which he became a fellow in 1768. In 1771 he was ordained deacon, and took the curacy of Denham, near Uxbridge. He soon left this to become tutor to the Duke of Marlborough's eldest son. Two years later he left this post to become travelling tutor to the son of the Earl of Pembroke. He travelled through Switzerland and afterwards in Russia, and published the results of his inquiries. He made a later continental tour, from which he returned in May 1786, with Samuel Whitbread, and another afterwards with H. B. Portman. In 1794 he made a tour to Hungary with Lord Brome, eldest son of Lord Cornwallis.

He had meanwhile been receiving preferment. In 1786 he took the college living of Kingston-on-Thames, which he resigned in 1788 on his presentation by Lord Pembroke to the rectory of Bemerton. Here he chiefly resided until his death. About 1800 Sir Richard Colt Hoare presented him to the rectory of Stourton, which he held until 1811, when he was presented by Lord Pembroke to the rectory of Fovant, Wiltshire. He was appointed archdeacon of Wiltshire by Bishop Douglas in May 1804, and had been a prebendary of Salisbury from 1791. Coxe, after publishing his various travels, put out a prospectus in 1792 for an 'Historical and Political State of Europe.' This came to nothing, and he devoted himself chiefly to a series of memoirs, which are of great value for the history of the eighteenth century. He was entrusted with many valuable collections of papers, and was a laborious and careful editor. His books contain also original documents, though his own writing is of the dullest and shows no higher qualities than those of the conscientious annalist. He wrote a few professional works, but his chief article of faith seems to have been the impeccability of the whigs. In person he was short, stout, and erect, healthy and active; he clearly had the amiability which makes friends of fellow-travellers, not the less when they are patrons

of livings, and seems to have been a really worthy man in his way.

He married in 1803 Eleonora, daughter of Walter Shairp, consul-general of Russia, and widow of Thomas Yeldham of the British factory at St. Petersburg. He died 8 June 1828, and was buried in the chancel of Bemerton.

His works are: 1. 'Sketches of the Natural, Political, and Civil State of Swisserland,' 1779 (French translation, 1781). 2. 'Account of the Russian Discoveries between Asia and America,' 1780 (4th edition, 1804; German translation, 1783). 3. 'Account of Prisons and Hospitals in Russia, Sweden, and Denmark,' 1781. 4. 'Travels into Poland, Russia, Sweden, and Denmark,' 3 vols. 1784 (in Pinkerton's collection, vol. vi.; French translations, 1786, 1791). 5. 'Travels in Switzerland,' 3 vols. 1789; 4th edition, 1801, with 'Historical Sketch and Notes on late Revolution,' re printed separately in 1802 (Pinkerton's collection, vol. v.) 6. 'Letter on Secret Tribunals of Westphalia,' 1796. 7. 'Memoirs of Sir Robert Walpole,' 3 vols. 1798. 8. 'Historical Tour in Monmouthshire,' 1801 (with plates from drawings by his companion, Sir R. C. Hoare). 9. 'Memoirs of Horatio, Lord Walpole,' 1802, and, enlarged in 2 vols., 1808. 10. 'History of the House of Austria ... from 1218 to 1792,' 2 vols. 1807 (Bohn's Standard Library, 1807). 11. 'Memoirs of the Bourbon Kings of Spain ... from 1700 to 1788,' 3 vols. 1813. 12. 'Memoirs of John, Duke of Marlborough,' 3 vols. 1818, 1819. 13. 'Private and Original Correspondence of Charles Talbot, Duke of Shrewsbury,' 1821. 14. 'Memoirs of the Administrations ... of Henry Pelham' (posthumous), 1829. Besides these Coxe wrote a pamphlet against Dr. Price in 1789, and edited Gay's 'Fables' in 1796, with a 'Life of Gay,' published separately in 1797; also 'Anecdotes of Handel and J. C. Smith,' 1798; a pamphlet against J. Benett on 'Tithe Commutation,' 1814; 'Sketches of the Lives of Correggio and Parmegiano' (anon.), 1823; and a few sermons and religious tracts.

[Gent. Mag. for 1828, ii. 86-9; Annual Obituary for 1829, pp. 227-35.]

COXETER, THOMAS (1689-1747), literary antiquary, born at Lechlade in Gloucestershire on 20 Sept. 1689, was educated at Coxwell, Berkshire, and at Magdalen school in Oxford. On 7 July 1705 he was entered a commoner of Trinity College, Oxford. Having completed his course at the university, he came to London with the intention of engaging in the practice of the civil law; but in 1710, on the death of his patron, Sir John Cook, dean of arches, he abandoned the legal profession and devoted himself to literary and antiquarian pursuits. An elegy in a book entitled 'Astræa Lacrimans,' published anonymously in 1710, was probably written by Coxeter. In 1720 he contributed one or more of the indexes to Hudson's edition of 'Josephus;' and in 1739 he published a new edition of Baily's (or rather Dr. Richard Hall's) 'Life of Bishop Fisher.' Coxeter was a zealous collector of old English plays, and allowed the Shakespearean editor, Theobald, to make free use of his treasures. He also assisted Ames in the preparation of 'Typographical Antiquities.' In 1744 he circulated proposals for issuing an annotated edition of the dramatic works of Thomas May, but the scheme was never carried out. He stated in the prospectus that, having determined to 'revive the best of our old plays, faithfully collated with all the editions that could be found in a search of above thirty years,' he 'happened to communicate his scheme to one who now invades it,'—the reference being to Robert Dodsley, whose 'Select Collection of Old Plays' appeared in 1744. In the same prospectus he promised an edition (which was never published) of the works of Thomas Sackville, lord Buckhurst. In 1747 he was appointed secretary to a society for the encouragement of an essay towards a complete English history. He died of a fever on 19 April 1747, and was buried in the chapel yard of the Royal Hospital of Bridewell. His daughter, whose necessities were frequently relieved by Dr. Johnson, died in 1807.

Coxeter's manuscript collections were largely used in Cibber's 'Lives of the Poets' and in Warton's 'History of English Poetry.' His statements are to be received with caution, for he did not scruple to invent titles of imaginary books. In 1759 appeared, in four volumes, an edition of Massinger's works, 'revised, corrected, and editions collated by Mr. Coxeter.' Gifford pronounces a very severe judgment on his predecessor's labours. 'Though educated at the university,' he remarks, 'Coxeter exhibits no proofs of literature. To critical sagacity he has not the smallest pretension; his conjectures are void alike of ingenuity and probability, and his historical references at once puerile and incorrect.' If Coxeter's 'Massinger' had been issued during the editor's lifetime, Gifford's animadversions would not have been too strong; but as Coxeter did not see the edition through the press, and had left only a few scattered notes, the attack was hardly justifiable.

[Gent. Mag. li. 173–4; Nichols's Literary Anecdotes, ii. 512–13; Warton's Hist. of English Poetry, ed. Hazlitt, iv. 209–10; Boswell's Johnson, ed. 1840, pp. 171, 547; Introduction to Gifford's Massinger, 2nd edit. pp. lxxxix–xciii; Oldys's Annotated Langbaine, p. 353.] A. H. B.

COXON, THOMAS (*fl.* 1609–1636), artist. [See COCKSON.]

COXON, THOMAS (1654–1735), jesuit, was a native of the county of Durham. He entered the Society of Jesus in 1676, and became a professed father in 1694 (FOLEY, *Records*, v. 532, vii. 179). For many years (1695–1724) he was a missioner in England, and he died at the college of St. Omer on 6 May 1735. He prepared the splendid edition of Ribadeneira's 'Lives of the Saints,' London, 1730, fol., translated by the Hon. William Petre, whose version was first issued from the press of St. Omer's College in 1699 (OLIVER, *Jesuit Collections*, 77; LOWNDES, *Bibl. Man.* ed. Bohn, 2081).

[Authorities cited above.] T. C.

COYNE, JOSEPH STIRLING (1803–1868), dramatic author, was the son of Denis Coyne, port surveyor of Waterford, and his wife Bridget Cosgrave, who died at 13 Craven Street, Strand, London, about 1850. He was born at Birr, King's County, in 1803, educated at Dungannon school, and intended for the legal profession; but the favourable reception of a series of light articles written for the periodicals then published in Dublin induced him to change the pursuit of law for that of literature. His first farce, called 'The Phrenologist,' was brought out at the Theatre Royal, Dublin, in June 1835, and was so well received that in the following year he produced two farces, 'Honest Cheats' and 'The Four Lovers.' In 1836 he came to London with a letter of introduction from William Carleton to Crofton Croker, which at once procured him employment in connection with 'Bentley's Miscellany' and other magazines, and his name soon became familiar to the reading public. His amusing farce called 'The Queer Subject' was brought out at the Adelphi in November 1836, and in the same year he became one of the literary staff of the 'Morning Gazette,' a short-lived journal, which was the first cheap daily paper. For the Adelphi he wrote from time to time a number of pieces which became very popular, and there and at the Haymarket most of his more important productions were brought out. Among his best dramas may be mentioned 'The Hope of the Family,' 'The Secret Agent,' 'Man of Many Friends,' and 'Black Sheep.' Of his numerous farces the following still keep the stage: 'Binks the Bagman,' 'Did you ever send your wife to Camberwell?' 'Box and Cox married and settled,' 'Wanted 1,000 Young Milliners,' 'The Little Rebel,' 'Pas de Fascination,' and some others. His well-known farce, 'How to settle Accounts with your Laundress,' was translated into French and played in Paris at the Vaudeville under the title of 'Une femme dans ma fontaine,' and afterwards made its appearance on the German stage. His drama called 'Everybody's Friend' was first brought out at the Haymarket on 2 April 1859, when Charles Mathews and J. B. Buckstone appeared in it as Felix Featherley and Major Wellington de Boots. On its reproduction at the St. James's, 16 Oct. 1867, it was renamed 'The Widow Hunt,' and the chief parts were taken by Henry Irving and John Sleeper Clarke, since which time it has been repeatedly played at many of the London houses. Coyne's distinguishing attributes were a comic force and nerve and a true sense of humour. Actively contributing during the whole of this time to the newspaper press and magazines, he will also be remembered as one of the literary men who met at the Edinburgh Castle, Strand, London, in June 1841 to agree about the publication of 'Punch.' He was among the contributors to No. 1 of that paper on 17 July, but his connection with it was but of short duration (*Mr. Punch, his Origin and Career*, London, printed by James Wade, pp. 18, 20, 25, 31). In 1856 he was appointed secretary to the Dramatic Authors' Society, and continued to discharge the duties of that office with ability and zeal till within a few days of his decease. During some considerable period he was dramatic critic on the 'Sunday Times' newspaper. He lived for many years at 3 Wilmington Square, Clerkenwell, but then removed to 61 Talbot Road, Westbourne Park, London, where he died, 18 July 1868, aged 65, and was buried in Highgate cemetery on 21 July. He married, in June 1840, Anne Comyns, relict of Matthew Comyns, and daughter of Wilkins and Margaret Simcockes of Galway. She died at The Green, Richmond, Surrey, on 25 Jan. 1880, aged 68. He was the author of 'Scenery and Antiquities of Ireland,' 2 vols. 4to, 1842, which was elaborately illustrated by W. H. Bartlett; 'Pippins and Pies, or Sketches out of School,' 1855; and 'Sam Spangle, or the History of a Harlequin,' 1866. He contributed to Albert Smith's 'Gavarni in London,' 1848, as well as to his 'Sketches of London,' 1859, and to a work called 'Mixed Sweets from Routledge's Annual,' 1867. He was a most industrious writer, and no year passed in which he did not bring out one or

more pieces. At the time of his death he was the author of upwards of fifty-five dramas, burlesques, and farces, besides having written several plays in collaboration with H. C. Coape, Francis Talfourd, and H. Hamilton.

[Era, 26 July 1868, p. 10; Gent. Mag. (August 1868), p. 413; Illustrated Sporting News, v. 252 (1866), with portrait; Sunday Times, 26 July 1868, p. 8; information from his son, E. Stirling Coyne.] G. C. B.

COYTE, WILLIAM BEESTON, M.D. (1741?–1810), botanist, son of William Coyte, M.B., of Ipswich (1708–1775), by his wife, a daughter of the Rev. Edmund Beeston of Sproughton, graduated M.B. at Queen's College, Cambridge, in 1763. Like his father, he practised medicine at Ipswich, and interested himself in botany. His name appears in the lists of the Linnean Society from 1794 to his death. His garden at Ipswich was carefully tended, and a catalogue of its contents was published by him as 'Hortus Botanicus Gippovicensis, or a systematical enumeration of the Plants cultivated in Dr. Coyte's Botanic Garden at Ipswich,' Ipswich, 1796, 4to, followed by an 'Index Plantarum,' 1807. He contributed a paper to the 'Medical Transactions' (iii. 30) in 1785. He died at his residence 3 March 1810, in his sixty-ninth year. His younger brother, James (1749–1812), graduated B.A. at Caius College, Cambridge, in 1771, was rector of Cantley from 1779, and perpetual curate of St. Nicholas, Ipswich, from 1785 till 1812.

[Grad. Cantab.; Lists Linn. Soc. 1794–1809; Gent. Mag. lxxx. pt. i. (1810), 389; Nichols's Lit. Illustr. vi. 877–8.] B. D. J.

COZENS, ALEXANDER (*d.* 1786), landscape-painter in water-colours, was a natural son of Peter the Great and an Englishwoman from Deptford. The czar took her to Russia, where Cozens was born (date unknown), and had another son by her, who became a general in the Russian army. Cozens was sent by his father to study painting in Italy, whence he came to England in 1746. In 1760 we find his name among the contributors to the first public exhibition in London of works by living artists, which was held in the great room of the Society of Arts. This was got up by a body of artists who afterwards divided into the 'Free Society' and the 'Incorporated Society of Artists.' Cozens contributed to the exhibitions of both societies. In 1761 he obtained a prize from the Society of Arts at the exhibition in the Strand of the former, but he was one of the original members of the latter, incorporated in 1766. He also exhibited eight works at the Royal Academy between 1772 and 1781. He was mostly employed in teaching, was drawing-master at Eton school from 1763 to 1768, and gave lessons to the Prince of Wales. He also practised at Bath. He married a sister of Robert Edge Pine [q. v.], by whom he left one son, John Robert Cozens [q. v.] He died in Duke Street, Piccadilly, 23 April 1786.

Of Cozens's art before he came to England there are fifty-four specimens in the British Museum. These drawings, mostly if not all Italian scenes, were lost by him in Germany on his way from Rome to England, and were recovered in Florence thirty years afterwards (1776) by his son. They show him as a highly skilled draughtsman in the style of the time, with much sense of scenic elegance in composition. Some are wholly in pen and ink in the manner of line engravings. Others show extensive landscapes elaborately drawn in pencil, and partly finished in ink. Others are washed in monochrome, and some in colour of a timid kind. One, a view of Porto Longano in the Isle of Elba, is very prettily tinted. In most there is no sky to speak of, but in one he has attempted a bold effect of sunlight streaming through cloud, and brightly illuminating several distinct spots in the landscape. Several broad pencil drawings on greenish paper heightened with white are very effective. Altogether these show that Cozens before his arrival in England was a well-trained artist who observed nature for himself, and was not without poetical feeling. After his arrival in England he appears, from some drawings in the South Kensington Museum, to have adopted a much broader style, aiming at an imposing distribution of masses and large effects of light and shade. Sir George Beaumont was his pupil at Eton, and so also was Henry Angelo, whose 'Reminiscences' give a lively description of his peculiar method of teaching: 'Cozens dashed out upon several pieces of paper a series of accidental smudges and blots in black, brown, and grey, which being floated on, he impressed again upon other paper, and by the exercise of his fertile imagination, and a certain degree of ingenious coaxing, converted into romantic rocks, woods, towers, steeples, cottages, rivers, fields, and waterfalls. Blue and grey blots formed the mountains, clouds, and skies.' An improvement on this plan was to splash the bottoms of earthenware plates with these blots, and to stamp impressions therefrom on sheets of damped paper. In 1785 he published a pamphlet on this manner of teaching, called 'A new Method of assisting the Invention in Drawing original loose positions of Land-

scape.' In 1778 he published by subscription 'Principles of Beauty relative to the Human Head' (a work of more ingenuity than value), with nineteen engravings by Bartolozzi. The list of subscribers shows that he was much in favour with the court and the aristocracy, and contains the names of Beckford (afterwards the patron of his son), Burke, Garrick, Flaxman, Reynolds (Sir Joshua), and other distinguished artists and men of culture. Thomas Banks, [q. v.] exhibited in 1782, 'Head of a Majestic Beauty, composed on Mr. Cozens's principles.' Cozens also published 'The various Species of Composition in Nature,' and 'The Shape, Skeleton, and Foliage of Thirty-two Species of Trees' (1771, reprinted 1786).

[Redgrave's Dict. of Artists; Leslie's Handbook for Young Painters; Reminiscences of Henry Angelo; Edwards's Anecdotes; Library of the Fine Arts; Graves's Dict. of Artists.]

C. M.

COZENS, JOHN ROBERT (1752–1799), landscape-painter in water-colour, was the son of Alexander Cozens [q. v.] He was also probably his father's pupil, and he began to draw early, as Leslie mentions 'a very small pen-drawing of three figures on which is written "Done by J. Cozens, 1761, when nine years old."' Little is known about his life. He began to exhibit in 1767 at the Incorporated Society of British Artists, in Spring Gardens, and went to Switzerland in 1776 with Mr. R. P. Knight, where he made a number (fifty-four) of water-colour drawings, afterwards in the Townley collection, and now in the possession of the Hon. R. Allanson-Winn. In this year he sent from Italy his solitary contribution to the exhibitions of the Royal Academy, called 'A Landscape, with Hannibal, in his March over the Alps, showing his army the fertile plains of Italy,' a picture said to have been in oil colours, and so fine that Turner spoke of it as a work from which he learned more than anything he had seen before. After this he was in Italy with Mr. William Beckford [q. v.], where he executed for that gentleman a large number of water-colour drawings. He returned to England in 1783 and became deranged in 1794. Attended by Dr. Munro, and supported by Sir George Beaumont, he remained insane till his death in 1799. (There is some doubt about this date. Constable said 1796, other authorities 1799, but a correspondent of 'Notes and Queries,' 3rd series, xi. 294, had reason for believing he was alive after 1799.)

The drawings he made for Mr. Beckford were sold at Christie's. Ninety-two of them were sold in 1805, and four a few years before, and realised over 500*l*. They included views in the Tyrol, at Padua, Pæstum, Verona, Venice, Rome, Naples, and their neighbourhoods, showing that his travels in Italy were extensive. His drawings in the South Kensington Museum show that he visited Sicily and Elba. Leslie says he saw some noble drawings by him from Windsor Park, and he probably made many others in England, but it is on his Italian drawings that his fame rests. He was the first water-colour painter who sketched in Italy and the Alps, and he attained a skill in the rendering of atmosphere which had never been attained by any previous painter in water-colour. His drawings are little more than tinted monochromes, but they are delightful in tone, and his colour, though slight, is harmonious and suggestive. No one before had approached so near to nature with such slender materials, and in drawing and composition he was a master. It was, however, the tender, poetical sentiment which he managed to infuse into his drawings, his union of fidelity and fine style, his 'solemnity and sweetness,' his expression of the 'silent eloquence of nature,' his sympathy with his subject, whether mountain or plain, modern city or ruined temple, waterfall or leafy glade, his bold but gentle 'effects' of light and atmosphere, which mark him as one of the most original and imaginative of landscape-painters, and the greatest of all the precursors of Turner and Girtin in the English school of water-colour. These two artists studied his drawings at Dr. Munro's and Mr. Henderson's in the Adelphi, and a great number of Turner's copies of them are in existence, which testify to the large share they had in the education of his genius.

'Cozens,' said Constable, 'is all poetry,' and he went so far as to pronounce him 'the greatest genius that ever touched landscape.' Leslie says: 'So modest and unobtrusive are the beauties of his drawings, that you might pass them without notice, for the painter himself never says "Look at this or that," he trusts implicitly to your own taste and feeling; and his works are full of half-concealed beauties, such as nature herself shows but coyly, and these are often the most fleeting appearances of light.'

Mr. Henderson's son left a fine collection of drawings by Cozens to the British Museum; there are also several at South Kensington. Cozens executed two slight etchings.

C. M.

CRAB, ROGER (1621?–1680), hermit, a native of Buckinghamshire, was probably born about 1621. He says his mother had 20*l.* a year, or his father would not have married her. About 1641 he began to restrict himself to a vegetarian diet, avoiding even butter and cheese. From roots he got to a regimen of broth thickened with bran, and pudding made of bran and turnip leaves chopped together, and finally resorted to dock-leaves and grass. He drank nothing but water, and could live on three farthings a week. For seven years (probably 1642–9) he served in the parliamentary army, and during this period he induced one Captain Norwood to follow his regimen, with fatal effects. He states that while fighting for the parliament his skull was cloven to the brain, an injury which may account for some of his later eccentricities. The ground of his abstention from animal food seems to have been the supposed moral effects of a flesh diet. 'Butchers,' he observes, 'are excluded from juries; but the receiver is worse than the thief; so the buyer is worse than the butcher.' His asceticism was connected with a rude kind of mystical revolt against established notions in religion. He was 'above ordinances,' though sympathising neither with 'levellers nor quakers nor shakers nor ranters.' His views came to him by illumination; digging in his garden with his face to the east, he 'saw into the paradise of God.' His account of the seven spirits in man is original and curious. He says he had discussed his opinions 'with all sexes [sects?] and ministers in most counties of England.' Latterly he appears to have had some relations with the Philadelphian Society. His notions often got him into trouble. Parliament, he says, imprisoned him for two years; and he 'got sentence to death in the field from the Lord Protector.' Leaving the army he became 'a haberdasher of hats' at Chesham, Buckinghamshire; but he shut up his shop in 1651, and 'sold a considerable estate to give to the poor.' Settling on 'a small roode of ground' at Ickenham, near Uxbridge, he dwelt as a hermit in 'a mean cottage of his own building,' where he practised his austere regimen, wearing 'a sackcloth frock, and no band on his neck.' He dabbled in astrology and physic, having from a hundred to a hundred and twenty patients at a time. Godbold (or Godbolt), the minister of Uxbridge, told the people of Chesham he was a witch. The country justices twice had him up for sabbath-breaking. At the end of 1654 he came to London, to print an account of himself, staying with one Carter, a glover, at the sign of the Golden Anchor in Whitecross Street. Here he again got into trouble, and was committed to Clerkenwell prison on 17 Jan. 1655; his keeper gave him nothing to eat, but a dog brought him a bit of bread. He was assisted in bringing out his book by an unknown hand, which supplied some additional particulars by way of introduction. He returned to Ickenham, but was in London again in September 1657, on another publishing errand. This time he was brought up at Hicks's Hall, as before, for Sabbath-breaking; he gives an account of his trial. Ultimately he transferred his hermitage to Bethnal Green. His publications are rather coarse, but shrewd, and with occasional lapses into rhyme.

> When I was a digging parsnips
> for my meals,
> Then I discovered these cheats
> For which I sate six hours by the heels.

In his later days he does not seem to have been molested, and he acquired a reputation for sanctity and seership. He is said to have foretold the Restoration, and to have predicted that William of Orange would come to the throne. He died at Bethnal Green on 11 Sept. 1680, in his sixtieth year, and was buried on 14 Sept. in Stepney Church. His tomb is no longer to be seen, but the inscribed slab is let into the pavement.

Crab published: 1. 'The English Hermite, or Wonder of this Age, being a relation of the life,' &c., 1655, 4to (published 23 Jan.); reprinted in Harl. Miscell. iv. 478 (edit. of 1808). Prefixed to some copies is a full-length woodcut of Crab, with verse at foot. 2. 'Dagons-Downfall, or the Great Idol digged up Root and Branch,' &c., 1657, 4to. 3. A tract against quakerism (not seen; George Salter of Hedgerley-Dean, Buckinghamshire, published 'An Answer to Roger Crab's Printed Paper to the Quakers, &c.,' 1659, 4to; Salter's reply is temperately written, he gives the initials, but not the names of certain followers of Crab).

[Account of Stepney Parish in Lysons's Environs of London, 1792–6; Lempriere's Universal Biography, 1808; Granger's Biog. Hist. 1824, iv. 96; Smith's Cat. of Friends' Books, 1867, ii. 527; works cited above.] A. G.

CRABB, GEORGE (1778–1851), legal and miscellaneous writer, was born 8 Dec. 1778 at Palgrave, Suffolk. He was educated at a school at Diss and under a private tutor. He commenced the study of medicine, but being unable to endure the dissecting-room resigned his medical studies to become assistant to a bookseller. This he also in a short time resigned to study for the ministry at Northampton, but a sudden change in his religious views rendered it necessary for him

again to make choice of a new profession. In 1797 he came to London, and after his marriage to a Miss Southgate, who subsequently edited 'Tales for Children from the German,' became classical master at Thorp Arch School, Yorkshire. In order to acquire a mastery of the German language he went in 1801 to Bremen, where he supported himself at the same time by teaching English. On his return he published a 'German Grammar for Englishmen,' 'Extracts from German Authors,' and 'German and English Conversations,' all of which became very popular as instruction books, and passed through many editions. He also wrote an 'English Grammar for Germans.' In 1814 he entered Magdalen Hall, Oxford, as a gentleman commoner, and graduated B.A. in 1821 and M.A. in 1822, with mathematical honours. He was called to the bar at the Inner Temple in 1829, and adopted the practice of conveyancer and chamber counsel, but on account of his retiring manner was not very successful, although his ability as a lawyer is sufficiently shown by his various legal publications. The principal of these are a 'History of English Law,' 1829, founded on Reeves's 'History of English Law;' 'Digest and Index of all the Statutes at Large,' 4 vols., 1841–7; 'Law of Real Property,' 2 vols., 1846; 'Series of Precedents in Conveyancing and Common and Commercial Forms,' 3rd ed. 1845. He was also the author of various dictionaries which obtained wide popularity, including a 'Dictionary of English Synonymes,' 'Universal Technological Dictionary,' a 'Universal Historical Dictionary,' and a 'Dictionary of General Knowledge;' and the 'New Pantheon or Mythology of all Nations.' His later years were passed in eccentric seclusion, and he died 4 Dec. 1851.

CRABB, HABAKKUK (1750–1794), dissenting minister, was born at Wattesfield, Suffolk, in 1750, being the youngest but one of fifteen children. His father was a deacon of the congregational church at Wattesfield, a man of private property, who latterly became a maltster. Habakkuk was a pupil of John Walker, congregational minister at Framlingham, and in 1766 proceeded to Daventry Academy under Caleb Ashworth [q.v.] He injured his constitution by close study. Leaving Daventry in 1771 he became minister at Stowmarket, where he was ordained on 3 June 1772. In 1776 he removed to Cirencester, and thence to Devizes, as assistant to his brother-in-law, John Ludd Fenner, in 1787. On 25 Feb. 1789 he undertook the pastorate at his native place, but his theology (he was probably an Arian) was too latitudinarian for the congregationalists of Wattesfield; he resigned the charge on 15 Aug. 1790, and became minister at Royston. The more orthodox portion of the congregation quietly seceded. Crabb was much beloved by his own people, and esteemed by all. Robert Hall speaks of his character as 'too well established to have anything to hope from praise, or to fear from censure.' He died after a short illness on 25 Dec. 1794. In 1778 he married Eliza Norman of Stowmarket, who died in childbed in 1792, and left seven children. Henry Crabb Robinson, the diarist, was his nephew.

A posthumous publication was 'Sermons on Practical Subjects,' Cambridge, 1796, 8vo (published by subscription for the benefit of his family).

[Funeral sermon, by S. Palmer, with funeral oration by Robert Hall and elegy by J. T. R. [John Towill Rutt], 1795; Brief Memoirs, by Hugh Worthington, prefixed to posthumous sermons, 1796; Prot. Diss. Mag. 1795, pp. 31, 40, 120, 1796, p. 121; Monthly Repos. 1822, p. 196; Browne's Hist. Cong. Norf. and Suff. 1877, pp. 473, 535.] A. G.

CRABB, JAMES (1774–1851), Wesleyan methodist preacher, was a native of Wilton, Wiltshire, where his father was a cloth manufacturer. He learned the business of his father, for whom he travelled for two years, but afterwards became a teacher of a school at Romsey, Hampshire. Here he married a Miss Radden, whose pious beliefs led him to become a preacher among the Wesleyan methodists, and he ultimately became pastor of a chapel in Southampton, while at the same time retaining his school. At an early period he took an active interest in the welfare of the gipsies in the New Forest, whom he occasionally gathered together and entertained at his house, these 'gipsy festivals' being attended by many of the neighbouring gentry. Among various institutions in Southampton which owed their origin to efforts which he initiated were the Hampshire Female Penitentiary, the Kingsland Place Infant Schools, the earliest of the kind in the country, and a Bethel for sailors, with a school for children near the quay. He expounded the needs of the gipsies in a tractate entitled the 'Gipsies' Advocate,' and he was also the author of 'Address to the Irvingites, in which many of their errors are exposed,' 1838, and 'Account of the Life and Experience of Captain John Bazin,' 1838. Crabb is the missionary referred to by Legh Richmond as having brought the 'Dairyman's daughter to a sense of religion.' He died 17 Sept. 1851.

CRABBE, GEORGE (1754–1832), poet, was born at Aldeburgh, Suffolk, 24 Dec. 1754. His father, George Crabbe, had been a village schoolmaster and parish clerk in Norfolk, and afterwards settled in his native town, Aldeburgh, where he married a widow named Loddock. He had by her six children, of whom George was the eldest, and rose through inferior offices to be 'saltmaster,' i.e. collector of salt duties. He was a man of great physical strength, imperious character, and strong passions; he had remarkable powers of calculation, and came to be for many years the 'factotum of Aldeburgh.' Robert, his second son, became a glazier. John, the third, was in command of a slave ship, when the slaves rose and sent him adrift with his crew in an open boat, nothing more being ever heard of them; the fourth, William, went to sea, was taken prisoner by the Spaniards, and settled in Mexico, where he married and prospered. He was forced by religious persecution to abandon his family and property, and was last heard of in 1803 on the coast of Honduras. His story is turned to account in Crabbe's 'Parting Hour' ('Tales' No. 2). There were two daughters, one of whom married a Mr. Sparkes, and died in 1827; the other's death in infancy threw her father into fits of gloomy misery, which strongly impressed her brother's imagination. George Crabbe, the son, was brought up at Aldeburgh amid scenery and characters afterwards most vividly described in his writings. He was chiefly self-educated. His father took in 'Martin's Philosophical Magazine' for the sake of the mathematical part, and handed over the poems to the son. Crabbe's bookish tastes induced his father to send him to school at Bungay, and afterwards to a school kept by Richard Haddon, a good mathematician, at Stowmarket. He was taken home and set to work for a time in a warehouse on the quay of Slaughden (described in his poems) till in 1768 he was bound apprentice to a village doctor at Wickham Brook, near Bury St. Edmunds, who employed him as errand boy and farm labourer. In 1771 he was transferred to Mr. Page, a surgeon at Woodbridge. Here he joined a small village club; one of its members introduced him to Sarah Elmy, then residing with her uncle, a substantial yeoman, at Parham, near Framlingham. Crabbe fell in love; his love was returned; and love led to poetry. He contributed verses to 'Wheble's Magazine' for 1772; won a prize for a poem on 'Hope;' celebrated 'Mira,' and planned epic poems and tragedies. He published anonymously at Ipswich in 1774 a didactic poem called 'Inebriety,' showing a close study of Pope and some satirical power. He tried vainly at Miss Elmy's bidding to learn the flute, and was at the same time acquiring a taste for botany. At the end of 1775 Crabbe returned to Aldeburgh. He was forced to set to work again in the repulsive duties of the warehouse. His father had acquired a love of the tavern in canvassing for the whig candidate at Aldeburgh during a contested election in 1774. He was now so violent as to be a terror to his meek wife, and had painful scenes with his son. The younger Crabbe continued his medical studies energetically in spite of these distractions, and the father sent him to London to 'pick up a little surgical knowledge.' He returned to Aldeburgh and became assistant to a surgeon named Maskill, and, upon Maskill's leaving the town, set up in practice for himself. His profits were small. His patients argued that a man who gathered plants in the ditches, presumably for medical purposes, could sell his drugs cheaply. The Warwickshire militia, quartered in the town in 1778, brought him some practice, and he was patronised by their colonel, H. S. Conway [q. v.] The Norfolk militia succeeded, and brought another gleam of prosperity. His engagement to Miss Elmy continued; it was approved by his parents and tolerated by her relations; but his practice fell off; his health was bad; Miss Elmy prudently declined to marry upon nothing, and Crabbe finally resolved to try his chances in literature. He borrowed five pounds from Mr. Dudley North, 'brother to the candidate for Aldeburgh,' and after paying his bill sailed to London with a box of surgical instruments, three pounds in cash, and some manuscripts. Crabbe took lodgings in the city 24 April 1780, near a friend of Miss Elmy's, wife of a linendraper in Cornhill. He bought a fashionable tie-wig from his landlord, Mr. Vickery, a hairdresser, and tried to dispose of his manuscripts. A poem called 'The Candidate' was published early in 1780. It was addressed to the 'Authors of the Monthly Review,' and received a cold notice in the number for September. The failure of the publisher deprived him of a small anticipated gain. He applied by letter vainly to Lord North, Lord Shelburne, and Thurlow. A cold letter from the last provoked a strong remonstrance in verse, which was unanswered. (William Cowper had a curiously similar passage with Thurlow two years later [see COWPER, WILLIAM].) From the others he heard nothing. A journal addressed to Miss Elmy from 21 April to 11 June 1780 gives a vivid description of his difficulties. At last, in the beginning of 1781, he wrote a letter to Burke, describing his

history, and saying that he would be in a debtor's prison unless within a week he could pay a debt of 14*l*. He had vainly applied to all his friends, including Lord Rochford, of whose late brother he had some knowledge. Burke, though a complete stranger, came to the rescue. He read Crabbe's poems, and persuaded Dodsley to publish the 'Library,' the whole profits of which were liberally given by Dodsley to the author. Burke took Crabbe to stay with him at Beaconsfield, where the poet worked upon his next publication, the 'Village.' Through Burke he also became acquainted with Reynolds and Johnson. Thurlow soon afterwards asked him to breakfast and gave him a bank-note for 100*l*., while apologising frankly for former neglect.

The success of the 'Library,' hastened by Burke's warm advocacy, at once gave Crabbe a position in literature. Burke meanwhile advised him to take orders, as offering the most suitable career, and at the request of Burke, backed by Dudley North and Mr. Charles Long, Bishop Yonge of Norwich admitted Crabbe to deacon's orders 21 Dec. 1781. He was licensed as curate to Mr. Bennet, the rector of Aldeburgh, and took priest's orders the following August. Crabbe was well received in his native town, where his father took pride in his success. His mother had died during his absence. We are told that Crabbe had not altogether escaped some youthful temptations, and was too well known in the Aldeburgh tavern; but his conduct had been habitually pure, and he practised henceforth an exemplary morality.

Burke soon obtained for Crabbe the offer of a chaplaincy to the Duke of Rutland; and he accordingly went to reside at Belvoir in 1782. The duke and duchess, a celebrated beauty, were leaders of society and lived in a style of splendour little congenial to Crabbe's homely manners. They treated him kindly, however; and he finished the 'Village,' which Johnson read, applauded, and, after suggesting some trifling corrections, returned with a prophecy of success. It appeared in May 1783, and succeeded as it deserved. Thurlow again asked him to dinner, and, telling him with an oath that 'he was as like Parson Adams as twelve to a dozen,' presented him to the small livings of Frome St. Quentin and Evershot in Dorsetshire. The Archbishop of Canterbury gave him the degree of LL.B. to qualify him for the preferment. At the beginning of 1784 the Duke of Rutland went to Ireland as lord-lieutenant. Crabbe preferred to remain at Belvoir, which the duke asked him to consider as a home till something could be found for him. He was now able to marry without imprudence; Miss Elmy became his wife in December 1783; the first child was born at Belvoir; but in 1785 Crabbe took the curacy of Stathern, and settled in the village parsonage. In 1784 he published a brief memoir of Lord Robert Manners, his patron's brother (killed in Rodney's victory, 12 April 1782), in the 'Annual Register,' and in 1785 he published the 'Newspaper.' Twenty-two years of silence followed.

Crabbe was intellectually active during all this period, and also wrote voluminously. But he had a system (less common than might be wished) of periodical 'incremations.' His children helped him at intervals to burn masses of manuscript too vast to be safely consumed in the chimney. Among the destroyed papers was an 'Essay on Botany,' so nearly ready that he had already proposed the publication to Dodsley. Davies, vice-master of Trinity College, Cambridge, protested against an English publication upon such a subject, and it was therefore burnt.

The death of the Duke of Rutland in October 1787 deprived Crabbe of a patron; but the duchess persuaded Thurlow to allow of the exchange of the Dorsetshire livings for two better livings near Belvoir. Crabbe thus became rector of Muston and Allington, and settled at the Muston parsonage 25 Feb. 1789. In October 1792 his wife's uncle, Tovell, died, leaving Crabbe as his executor. Tovell's fortune also came ultimately to Crabbe. Upon Tovell's death he removed to Parham, leaving a curate in his own parish and becoming himself curate of Sweffling and Great Glemham. In 1796 he became the tenant of Dudley North at Great Glemham Hall. Here he led a retired life. His frugal habits made him an unpopular successor to the convivial Tovell; he was wanting in political zeal and therefore unjustly suspected of Jacobinism. Domestic troubles strengthened his habits of retirement. Five out of seven children died, and on the death of the last Mrs. Crabbe fell into a nervous disorder, which produced extreme depression, relieved by occasional intervals. Crabbe found consolation in botanical and literary work, three novels being 'incremated' at this time as well as the botanical treatise. His health was greatly improved by recourse to opium for digestive weakness. His preaching attracted large congregations. He was a clergyman of the old-fashioned school, a good friend to the poor, for whose benefit he still practised medicine, and a preacher of good homespun morality. But he was indifferent to theological speculations, suspicious of excessive zeal, contemptuous towards 'enthusiasts,' and heartily opposed to

Wesleyans, evangelicals, and other troublesome innovators. His laxity in regard to residence now attracted official notice, and Pretyman, bishop of Lincoln, insisted about 1801, in spite of applications from Dudley North, that he should return to Muston. Crabbe obtained leave of absence for four years longer, which were spent at Rendham, a neighbouring village, Great Glemham Hall having been sold by North. In October 1805 he returned to Muston and found that dissent had thriven during his absence. He seems to have attacked it with more fire than prudence. The 'Parish Register' was finished at the end of 1806, having been begun eight years before. He offered the dedication to Fox, who had met him at Beaconsfield and afterwards in 1794 or 1795 at North's house in Suffolk, and shown him much courtesy. Fox, though now breaking, fulfilled a previous promise by reading and correcting it. The story of 'Phœbe Dawson' was one of the last pieces of poetry which gave pleasure to the dying statesman. The 'Parish Register,' with 'Eustace Grey' and other poems, appeared after Fox's death (September 1807) with a dedication to Lord Holland. It had a great success, and was followed by the equally successful 'Borough' in 1810. Some attacks upon the Huntingtonians in this poem produced a controversy with the editor of the 'Christian Observer,' which ended amicably. In 1812 appeared 'Tales in Verse,' which led to friendly communications with Scott, who had already written kindly of the 'Parish Register.'

On 31 Oct. 1813 Mrs. Crabbe died, and the simultaneous occurrence of other troubles caused a severe illness. Crabbe had remained upon friendly terms with the Rutland family and occasionally visited Belvoir, where he was much pleased among other things with the talk of Beau Brummell [q. v.] The Duke of Rutland now offered him the living of Trowbridge, Wiltshire, to which was added, in order to make up for a mistake as to value, the living of Croxton, near Belvoir. He was inducted to Trowbridge Church on 3 June 1814. Here he had to encounter some opposition from the parishioners, who had pressed the claims of another candidate upon the patron, and was even mobbed at a contested election, when he showed unflinching firmness. He was welcomed by the chief people, and his liberality and independence gradually won general popularity. His son mentions certain flirtations which prove that he was still sensitive to feminine charms and capable of attracting feminine devotion. He was now famous, and on a visit to London in 1817 was welcomed at Holland House and received many attentions from Rogers, Moore, Campbell, and others. In 1819 he published the 'Tales of the Hall.' Murray paid him 3,000*l.* for these and the copyright of his previous poems, and Crabbe insisted upon carrying the bills about in his waistcoat pocket to show to 'his son John.' On a later visit to London (1822) he met Scott, and the same autumn visited Edinburgh, where he unluckily arrived during the welcome of George IV. He stayed at Scott's house and was introduced to the literary celebrities. Lockhart showed him the sights, and Scott occasionally entrusted him to a 'caddie,' as Colonel Mannering provided for Dominie Sampson. Crabbe showed equal simplicity, and was one day found discoursing in execrable French to some highland chiefs whose costume and Gaelic had suggested some indefinite foreign origin.

Crabbe led a retired life in later years, varied by occasional visits to his son George, now vicar of Pucklechurch, to the house of Samuel Hoare at Hampstead, where he met Wilberforce, Joanna Baillie, Miss Edgeworth, Mrs. Siddons, and others, and to seaside places. He saw Horace Smith, author of the famous parody in 'Rejected Addresses,' and spoke good-humouredly to his 'old enemy.' His second son, John, became his curate at Trowbridge at the beginning of 1817, having just married a Miss Crowfoot, and lived with him till his death. He suffered much from tic douloureux, but took great pleasure in his grandchildren, kept up his old habits of observation, performed services, and became increasingly liberal. His strength declined gradually, and he died 3 Feb. 1832.

A monument, with a statue by Baily, was erected in the church at Trowbridge at the cost of the parishioners. Portraits were painted by Pickersgill and Phillips. An engraving from the latter, painted for Mr. Murray and copied for Lord Holland, is prefixed to his works.

Horace Smith, in a note to 'Rejected Addresses,' called Crabbe 'Pope in worsted stockings.' Byron, in 'English Bards and Scotch Reviewers,' says that he is, 'though nature's sternest painter, yet the best.' The resemblance to Pope consists chiefly in the fact that Crabbe retained the old form of verse, and in his first poems adopted the didactic method. His 'stern painting of nature' was the power to which he owes his permanent interest. The 'Village' was intended as an antithesis to Goldsmith's idyllic sentimentalism. Crabbe's realism, preceding even Cowper and anticipating Wordsworth, was the first important indication of one characteristic movement in the contemporary school

of poetry. His clumsy style and want of sympathy with the new world isolated him as a writer, as he was a recluse in his life. But the force and fidelity of his descriptions of the scenery of his native place and of the characteristics of the rural population give abiding interest to his work. His pathos is genuine and deep, and to some judgments his later works atone for the diminution in tragic interest by their gentleness and simple humour. Scott and Wordsworth had some of his poetry by heart. Scott, like Fox, had Crabbe read to him in his last illness (Lockhart, ch. lxxxiii.) Wordsworth said that the poems would last as long as anything written in verse since their first appearance (note to 'Village,' bk. i. in *Collected Works*). Miss Austen said that she could fancy being Mrs. Crabbe. Jeffrey reviewed him admiringly, and in later years E. FitzGerald, the translator of 'Omar Khayyám,' wrote (1882) an admiring preface to a selection in which he says that Lord Tennyson appreciates them equally with himself. Cardinal Newman speaks of the 'extreme delight' with which he read 'Tales of the Hall' on their appearance. Thirty years later he says that a fresh reading has touched him still more, and a note, after a further lapse of twenty years, endorses this opinion. 'A work which can please in youth and age seems to fulfil (in logical language) the accidental definition of a classic' (*The Idea of a University*, ed. 1875, p. 150).

His works were: 1. 'Inebriety,' Ipswich, 1775. 2. 'The Candidate, a poetical epistle to the author of the "Monthly Review,"' 1780. 3. 'The Library,' 1781 and (with the author's name) 1783. 4. 'The Village,' 1783. 5. 'Character of Lord Robert Manners,' in 'Annual Register' for 1783. 6. 'The Newspaper,' 1785 (this has been translated into German, 1856, and Dutch, 1858). 7. 'The Parish Register,' 1807, in a volume including reprints of the 'Library,' the 'Village,' and the 'Newspaper,' also (for the first time) 'Sir Eustace Grey,' and some shorter poems. 8. 'The Borough,' 1810. 9. 'Tales,' 1812. 10. 'Tales of the Hall,' 1819. All the above are published, together with some posthumous 'Tales,' in the collected edition of his works (8 vols. 1834, and in 1835 and at later dates in one volume), with life by his son. Besides these Crabbe published two separate sermons, and contributed an account of the natural history of the vale of Belvoir to the 'History of Leicestershire.'

George Crabbe, the poet's son, born 16 Nov. 1785, received his whole education from his father, except a few months under Mr. King at Ipswich, entered Trinity College, Cambridge, in 1803, graduated B.A. 1807, became curate of Allington in 1811, married Caroline Matilda, daughter of Thomas Timbrell of Trowbridge, in 1817, and became curate of Pucklechurch. In 1834 he was presented by Lord Lyndhurst to the vicarages of Bredfield and Petistree in Suffolk, and built a parsonage at Bredfield, where he lived till his death, 16 Sept. 1857. Besides the life of his father (1834) he published a book upon natural theology. He inherited his father's humour, was a sturdy, old-fashioned gentleman, enjoying long walks amidst fine scenery or to objects of antiquarian interest, and professing a hearty contempt for verse, except, apparently, his father's (*Gent. Mag.* 1857, ii. 562, and *Life of G. Crabbe*).

[Crabbe's Life by his son George, an excellent piece of biography, is the main authority for his life. See also Brief Notices of the Rev. G. Crabbe . . . by James Hews Bransby, Carnarvon, 1832; Cuttings from Crabbe, with a Memoir (by Mr. Taylor, a parishioner; see Life of Crabbe, 1861, p. 73); Autobiographical Sketch in New Monthly Magazine, 1816, republished in the Annual Biog. and Obituary for 1833. The Leadbeater Papers (1862), ii. 337–403, gives the full correspondence with Mary Leadbeater, daughter of Burke's friend, Shackleton.] L. S.

CRABTREE or KRABTREE, HENRY (*fl.* 1685), astrologer, would scarcely deserve mention here but for the fact that he has sometimes been confounded with William Crabtree the astronomer. He was born either at Norland or at Sowerby, in the parish of Halifax, and is said to have been a schoolfellow of Archbishop Tillotson. He became curate of Todmorden in Lancashire, and in 1685 published 'Merlinus Rusticus, or a Country Almanack' (London, printed for the company of Stationers). From the long description of the contents given in the title-page (which is copied in the anonymous 'History of Halifax') it appears that the object of the book was mainly astrological. No copy of it is found in the library of the British Museum.

[Hist. of the Town and Parish of Halifax (Halifax, 1789), p. 320; Notes and Queries, 3rd ser. v. 192.] H. B.

CRABTREE, WILLIAM (1610–1644?), astronomer, son of John Crabtree, a 'husbandman' of fair estate, was born at Broughton, near Manchester, in 1610, and baptised at the collegiate church of Manchester on 29 June that year. He was educated, it is presumed, at the Manchester grammar school, but did not go to Cambridge, as is sometimes stated. In due time he engaged in the business of a clothier or chapman (equivalent to a merchant of to-day), and seems to have been in comfortable circumstances. In his twenty-

third year (14 Sept. 1633) he married Elizabeth, daughter of Henry Pendleton of Manchester, of a family of local repute and good position.

He early took up the pursuit of astronomy with great ardour. He was an exact calculator, discovered defects in the tables of Lansberg and other continental astronomers, and simplified the Rudolphian tables and converted them into decimals. When he entered into correspondence in 1636 with Jeremiah Horrox [q. v.], he was able to encourage and instruct that extraordinary youth in his celestial observations. Horrox, who was eight or nine years younger than Crabtree, frequently refers to him in his writings in terms of praise or friendliness. After frequent consultation Horrox and Crabtree prepared to observe the transit of Venus on Sunday, 24 Nov. 1639, the former at Hoole and the latter at Broughton. As is well known, the observations were successful, and the two friends were the first human beings that ever witnessed the phenomenon. It is narrated by Horrox that 'a little before sunset, namely at 35 m. past 3, certainly between 30 and 40 min., the sun burst forth from behind the clouds. He [Crabtree] at once began to observe, and was gratified by beholding the pleasing spectacle of Venus upon the sun's disc. Rapt in contemplation, he stood for some time motionless, scarcely trusting his own senses through excess of joy.'

Crabtree corresponded with William Gascoigne (inventor of the micrometer), Christopher Towneley, and Foster of Gresham College. One of his letters to Gascoigne, dated 7 Aug. 1640, was printed by W. Derham in the 'Philosophical Transactions,' No. 330 (vol. xxvii., or vol. v. of Hutton's 'Abridgment'). It is on the nature and appearance of sun spots, and contains some interesting references to astronomical books which he had read. The death of Horrox in January 1640, on the day before he had arranged to visit Broughton, was a great blow to him, as he himself touchingly records. Little is heard of him after the breaking out of the war, and it is uncertain when he died. In the Manchester church register is the entry '1644, Aug. 1. William Crabtree of Broughton, chapman,' and this is assumed to be the astronomer. Wallis, when editing the 'Opera Posthuma,' supposed him to have died a few days after Horrox, but later he was informed, as the result of local inquiries, that he lived till 1652 or 1653. If this is correct, he must have been buried elsewhere than at Manchester. He left a son and two daughters.

Crabtree's observations (dated 1 Aug. 1636 to 18 Sept. 1638) are comprised in Horrox's 'Opera Posthuma,' edited by Wallis and published in 1672 and again in 1673 and 1676. They extend from page 405 to 439, and have this special title: 'Excerpta ex Schediasmatis Guliel. Crabtrii, de Observationibus ab ipso institutis, Broughtonæ propè Mancestriam.' Sherburne says that they amount to not a tenth part of what he had made; but the unprinted papers have now been lost. In the Chetham Library there is a manuscript believed to be in his hand, entitled 'A True and p'fect Booke of all the Rates and Taxacons wch concerne this county of Lanc.,' dated 1650. A similar volume is among the Lansdowne MSS. in the British Museum.

One of the fine series of frescoes in the large room of the Manchester town hall has for its subject the observation of the transit of Venus by Crabtree. It was painted in 1883 by Mr. Ford Madox Brown.

[Palatine Note-book, ii. 262, iii. 17, 52, where Mr. J. E. Bailey has most carefully noted all the information that is available about Horrox and Crabtree; Horroccii Opera Posthuma; Hevelii Mercurius in Sole visus Gedani, 1662, pp. 117, 140; Flamsteed and Wallis's Letters in Corresp. of Scientific Men of the Seventeenth Century (Rigaud), 1841, vol. ii.; Sherburne's Sphere of M. Manilius, 1675, appendix, pp. 92, 117; Worthington's Diary (Chetham Soc.), i. 125, ii. 366, 383; Whatton's Memoirs of Horrox, 1859; Hutton's Mathem. Dict. 1815, i. 375; Grant's Hist. of Physical Astronomy, pp. 421, seq., 454–5; Manchester Quarterly, 1882, i. 313; Gent. Mag. xxxi. 225.] C. W. S.

CRACE, FREDERICK (1779–1859) a well-known collector of maps and views of London, was born on 3 June 1779. He followed the profession of his father as an architectural decorator, and was extensively employed on work at the royal palaces and other buildings. About 1818 he began to collect maps and views of London, a pursuit probably suggested to him by the circumstance that as a commissioner of sewers he often had occasion to consult old plans of the metropolis. During the last thirty years of his life he collected systematically. His magnificent collection was purchased in 1880 by the trustees of the British Museum from his son, Mr. John Gregory Crace, and is described in the 'Catalogue of Maps, Plans, and Views of London, Westminster, and Southwark, collected and arranged by Frederick Crace. Edited by his son, John Gregory Crace,' London, 1878, 8vo (another edition, 1879, 8vo). The whole collection consists of between five and six thousand prints and drawings, arranged in a series of fifty-seven portfolios. There are also eighteen large rollers with maps and plans, three volumes of maps, and a volume of 'Illustra-

tions of Frost Fairs on the Thames.' The greater part of these maps, plans, and views were arranged and uniformly mounted on tinted paper by Crace himself during his leisure hours. The maps, some of which are very rare or unique, form a continuous series, illustrating the growth of London from 1560 to 1859. Many of the plans are of important properties, such as the Grey Friars, the Grosvenor estates, the Bank, &c.; it is said that the production by Crace in the court of chancery, in 1858, of the plan of the Pest-house, Craven Hill estate, decided the question of the ownership of the property. The views of London are very numerous, and often incidentally illustrate bygone manners and customs. They include examples by Vischer, 1620; W. Hollar, 1647; Kip, 1748; and Buck, 1749. Many of the drawn views have artistic as well as antiquarian interest; among them are works by W. Capon, P. Sandby, T. Sandby, R. B. Schnebbelie, Major Yates, J. Findlay, J. Buckler, and G. Shepherd. Crace's ambition was to have an illustration of every noteworthy London building; and under his auspices T. H. Shepherd made several hundred water-colour drawings for the collection. A selection of 1,743 specimens from the Crace collection was exhibited to the public in the king's library of the British Museum in 1880 and following years. A very large number of the illustrations in Thornbury and Walford's 'Old and New London' (see note, vi. p. ii) are derived from the collection, the whole of which was, at one time, placed at the disposal of Messrs. Cassell, the publishers, by the collector's son. Mr. Crace, whose 'kind and genial disposition gained him a large circle of friends,' died at Hammersmith on 18 Sept. 1859, in his eighty-first year. He had continued, in spite of failing health, to work at his much-loved collection till the last. He married in 1804 Augusta, daughter of Mr. John Gregory of Chelsea, treasurer of the Whig Club.

[J. G. Crace's Catalogue of the Crace Collection; Guide to the Exhibition Galleries, Brit. Mus. 1884, pp. 30–5; Brit. Mus. Parliamentary Return, 1881, pp. 7, 45; Gent. Mag. vii. 3rd ser. 435.] W. W.

CRACHERODE, CLAYTON MORDAUNT (1730–1799), book and print collector, came from an ancient family long resident in Essex, the name of Mordaunt being derived from an alliance in the sixteenth century with the Mordaunts of Turvey in Bedfordshire. His father, Colonel Mordaunt Cracherode, had command of the marines in Anson's voyage round the world; his mother was Mary, daughter of Thomas Morice, paymaster of the British forces in Portugal, and sister of William Morice, high bailiff of Westminster, who married Atterbury's eldest daughter. Clayton Cracherode was born at Taplow, Buckinghamshire, on 23 June 1730, and admitted at Westminster School in 1742, whence he was elected second to Christ Church, Oxford, in 1746. He was in the head election at Westminster when Cumberland was at the school, who asserts that Cracherode, though 'grave, studious, and reserved as he was through life,' was also 'correct in morals, elegant in manners . . . pleasant to those who knew him.' While he lived he was a regular attendant at all Westminster meetings, and the second edition of Welch's 'Alumni Westmonasterienses' was much indebted to his manuscript notes in his copy of the first issue at the British Museum. He took the degree of B.A. on 4 May 1750, and that of M.A. on 5 April 1753, retaining his studentship at Christ Church until his death. His sole writings were some specimens of Latin verse in the 'Carmina Quadragesimalia,' composed by the students of his house, and printed in 1748; and a set of Latin verses in the collection of the university of Oxford on the death of Frederick, prince of Wales, in 1751. Cracherode took orders in the English church, and for some time held the curacy of Binsey, near Oxford, but he neither sought nor obtained any further preferment. On the death of his father in 1773 he inherited an ample fortune, which was estimated on his own death at 800*l.* a year from landed property and 2,300*l.* a year in long annuities. The days of this shy recluse passed away among the treasures in his own house or in adding to his stores from his favourite bookshops. He was never on horseback, and never travelled further from London than to the university. So slight was his curiosity that he never saw, except in a drawing, a celebrated chesnut tree on his own estate in Hertfordshire. His manor of Great Wymondley was held from the crown subject to the service of presenting to the king the first cup from which he drinks at his coronation, and the dread of the timid book-lover lest he should at any time be called upon to undertake this service embittered his whole life. Cracherode was both F.R.S. and F.S.A., and in 1784 he was elected a trustee of the British Museum. From the sale of Askew's books in 1775 he was the chief book-buyer of his age. It was his daily habit to walk to Elmsly's, a bookseller in the Strand, and then to the more noted shop of Tom Payne, by the Mewsgate. Though he often declaimed against the high prices which ruled in his

day, his purchases never ceased. An agent was buying prints when Cracherode lay on his deathbed, and on his farewell visit to Mewsgate, about four days before his death, he carried away in his ample pockets a 'Terence' and a 'Cebes.' He died 'after a severe struggle, in great pain,' at Queen Square, Westminster, on 5 April 1799, and was buried on 13 April near his mother, in the east cloister of Westminster Abbey. He had never married, and his will, which was drawn up by himself very precisely, though not couched in legal terms, was dated 9 April 1792, and proved on 17 April 1799 by his sister Anne Cracherode (who died on 17 July 1802), sole executrix and residuary legatee, to whom came the whole of his land and personalty, with the exception of 1,000*l.* for Christ Church, Oxford, 1,000*l.* for Westminster School, some charitable bequests and slight legacies to Cyril and William Jackson. In the course of his life he had amassed the choicest specimens of the earliest editions in classical and biblical literature, the rarest coins and gems, and the most exquisite prints which money could purchase. He left behind him 4,500 volumes, all of which were remarkable either for the rareness or the excellence of the impression, seven portfolios of drawings, one hundred portfolios of prints, with coins and gems, 'worthy of an imperial cabinet.' The whole of these collections were left by his will to the British Museum; two books only, the Complutensian Polyglot, and the *princeps* Homer which formerly belonged to De Thou, were excepted. The former he gave to Shute Barrington, bishop of Durham, and the latter to Cyril Jackson; but even these volumes ultimately came to the national collection, as Jackson would not dissever his gift from its former companions, and Barrington, on his death, left his possession to the Museum. His collection of prints comprised splendid examples of Rembrandt and Dürer, and it was the theft by Robert Dighton, a caricaturist, from these treasures which led to the dismissal of Beloe from his post at the Museum. Fortunately an appeal to the virtuosos who had purchased from the thief secured the return of most of the prints. The only likeness of Cracherode, which was taken after his health became impaired, is a drawing in blacklead made by Edridge by the order of Lady Spencer, but the subject of the sketch expressly ordered that it should not be engraved. It was reproduced in Clarke's 'Repertorium Bibliographicum,' and subsequently in Dibdin's 'Bibliographical Decameron.' Cracherode's name is introduced into the 'Pursuits of Literature' by Mathias. The poet Akenside was numbered among his friends, and there is preserved at the Bodleian a copy, formerly the property of Douce, of the following brochure: 'Fragments of a tragedy lately acted at the British Museum. Scene, the shades below, Mr. Cracherode, Mr. Townley, Mr. Steevens, and Mr. Quin . . . Roger and Thomas Payne,' 4to, pp. 3, on which Douce has written 'From the author, St. Weston, 1806, Aug.'

W. P. C.

CRADOCK, EDWARD (*fl.* 1571), alchemist, a native of Staffordshire, was educated at Christ Church, Oxford, where he graduated B.A. 11 Jan. 1555–6 and M.A. 10 Feb. 1558–9. He was elected Lady Margaret professor on 24 Oct. 1565, and later in the same year took both the degrees in divinity. In 1571 he published 'The Shippe of assured Safetie, wherein we may sayle without Danger towards the Land of the Liuing, promised to the true Israelites,' 16mo; 2nd edit. 1572, 8vo. Some Latin sapphics by Cradock are prefixed to Peterson's translation of Della Case's 'Galateo,' 1576, 4to. He spent many years in searching for the philosopher's stone, and wrote: 1. 'A Treatise of the Philosopher's Stone,' preserved among the Ashmolean manuscripts (1445), written in English verse and dedicated to Queen Elizabeth. 2. 'Tractatus de Lapide Philosophico' (Ashmolean MS. 1415), written in Latin verse and dedicated to Queen Elizabeth. 3. 'Documentum et Practica' (Ashmolean MS. 1408), which also deals with the philosopher's stone. He resigned his professorship in 1594.

A. H. B.

CRADOCK, JOHN (1708?–1778), archbishop of Dublin, born about 1708, was a native of Wolverhampton. Having received his education at St. John's, Cambridge, where he graduated B.A. in 1728, he was elected to a fellowship of his college, which he held with the rectory of Dry Drayton, Cambridgeshire. Subsequently he became rector of St. Paul's, Covent Garden, London, and chaplain to John, fourth duke of Bedford. The degree

of B.D. had been conferred on him in 1740, and that of D.D. in 1749. Accompanying the Duke of Bedford to Ireland on his appointment to the office of lord-lieutenant, he was soon after promoted, in November 1757, to the bishopric of Kilmore; and having held that see for fourteen years, he was translated to the archbishopric of Dublin, by patent dated 5 March 1772. In 1777 he incurred the vituperative attacks of Dr. Patrick Duigenan, who, in his 'Lachrymæ Academicæ,' took occasion to censure him severely because he had, as visitor of Trinity College, Dublin, spoken rather favourably of Provost Hutchinson, against whom that publication was specially directed. Cole says of him that he was 'a portly, well-looking man, of a liberal turn of mind, and a social and generous disposition.' His publications are: 1. 'A Sermon before the University of Cambridge,' 1739. 2. 'Sermon before the House of Commons,' 1752. 3. 'Fast Sermon,' on Jeremiah vi. 8, 1758. 4. 'A Charge delivered at his Primary Visitation in St. Patrick's Cathedral, Dublin,' 1772. He died at his palace of St. Sepulchre's, in the city of Dublin, 10 Dec. 1778, and was buried in the southern aisle of St. Patrick's, but there is not any inscription to his memory. His only son, John Francis Cradock, changed his name to Caradoc, and was raised to the Irish peerage in 1819, with the title of Baron Howden; and his widow, Mary Cradock, died 15 Dec. 1819, aged 89, and was buried in the Abbey Church, Bath.

[Graduati Cantabrigienses; Cotton's Fasti Ecclesiæ Hibernicæ, ii. 26, iii. 169; D'Alton's Memoirs of the Archbishops of Dublin, p. 344; Watt's Bibl. Brit.] B. H. B.

CRADOCK, Sir JOHN FRANCIS (1762–1839), general. [See Caradoc.]

CRADOCK, JOSEPH (1742–1826), man of letters, was the only surviving son of Joseph Cradock of Leicester and Gumley, and was born at Leicester 9 Jan. 1741-2. He was inoculated in spite of the prevailing prejudice. His father was threatened by the mob, and had to pay the surgeon 100*l*. His mother died in 1749, and his father afterwards married Anne Ludlam (*d.* 1774), sister of two well-known mathematicians. Cradock was educated at the Leicester grammar school. He lost his father in 1759, and was soon afterwards sent to Emmanuel College, Cambridge, of which Richard Farmer, his schoolfellow, was then tutor. He had already acquired a taste for the stage and for London society, and left Cambridge without daring to face the examination for a degree. In 1765 he married Anna Francesca, third daughter of Francis Stratford of Merivale Hall, Warwickshire. During his honeymoon the Duke of Newcastle, as chancellor, conferred upon him the M.A. degree. He took a house in the fashionable quarter, Dean Street, Soho; became known to the wits, and an enthusiastic playgoer. In 1766 Farmer dedicated to him the well-known essay on the 'Learning of Shakespeare.' Cradock soon afterwards settled at a mansion which he had built at Gumley, and upon a scale which led to embarrassment. He was high sheriff of Leicestershire in 1766 and 1781. In 1768 he was elected F.S.A. He gave private theatricals at Gumley, where Garrick offered to play the Ghost to his Hamlet, and in 1769 took a conspicuous part at the Stratford jubilee. He collected a fine library and amused himself with landscape gardening. A little book, called 'Village Memoirs' (1774), gives his views upon this subject, and upon religion and life in general. His musical skill procured him a welcome at Lord Sandwich's seat at Hinchinbroke, where Miss Ray sang in oratorios, while Lord Sandwich performed on the kettledrum. He was a patron of the music meetings at Leicester, originated in 1771 for the benefit of the infirmary. There was a great performance in 1774, when an ode written by Cradock, set to music by Boyce, was performed, and among the audience were Lord Sandwich and Omai, the native of Otaheite. In 1771 a tragedy by Cradock, called 'Zobeide,' founded on Voltaire's 'Les Scythes,' was performed at Covent Garden with success. Voltaire acknowledged the work in a note dated Ferney, 9 Oct. 1773, in which he says:—

> Thanks to your muse, a foreign copper shines,
> Turned into gold and coined in sterling lines.

In 1773 he wrote a pamphlet called 'The Life of John Wilkes, Esq., in the manner of Plutarch,' a Wilkite mob having broken his windows in Dean Street. In 1777 he published 'An Account of some of the most Romantic Parts of North Wales,' having ascended Snowdon in 1774. From 1783 to 1786 he travelled through France and Holland, his wife's health having failed. After his return his own health compelled him to withdraw from society, though he took part in various local movements. In 1815 he published 'Four Dissertations, Moral and Religious.' His wife died 25 Dec. 1816. In his later years he was very intimate with John Nichols, the antiquary. In 1821 he published a little novel against gambling, called 'Fidelia.' In 1823 growing embarrassments induced him to sell his estate and library and retire to London on a small

annuity. In 1824 he published his tragedy, 'The Czar,' which had got as far as a rehearsal fifty years before. Its reception was good enough to induce him to publish in 1826 his 'Literary and Miscellaneous Memoirs,' followed by a second volume including his travels. He died in the Strand 15 Dec. 1826. He is described as being 'a sort of twin brother' of Garrick, both in mind and body. He had a talent for acting, and was a lively, cultivated, and volatile person. His friend, George Dyer, speaks favourably of the generosity of his feelings, and adds that he was strictly temperate, living chiefly on very small quantities of turnips, roasted apples, and coffee, and never drinking wine. He was 'cupped sometimes twice a day;' yet he lived to be eighty-four.

[Brief Memoirs, prefixed by John Bowyer Nichols to Literary and Miscellaneous Memoirs by J. Cradock, 4 vols. 1828. The four volumes include all Cradock's works as mentioned above. His own Memoirs in the first volume are a rambling collection of reminiscences, some of which, especially of Goldsmith and Johnson, are interesting.] L. S.

CRADOCK, MARMADUKE (1660?–1716), painter (erroneously called 'Luke' by Walpole), was born at Somerton, near Ilchester, Somersetshire, about 1660, and was sent to London. After the expiration of an apprenticeship to a house-painter, he became a skilful painter from nature of animals, birds, and still life, but did not meet with success, and worked for dealers. He died in March 1716, and was buried on 24 March in St. Mary's, Whitechapel, having resided in Colchester Street. After his death the merits of his pictures were recognised, and they rose in value. Some very spirited groups of birds were engraved and published in 1740–3 by Josephus Sympson. Walpole praises some pictures by Cradock. One is at Knowsley.

[Redgrave's Dict. of English Artists; Nagler's Künstler-Lexikon; Walpole's Anecdotes of Painting, ed. Dallaway and Wornum; Sarsfield Taylor's State of the Arts in Great Britain and Ireland; Scharf's Catalogue of the Pictures at Knowsley Hall; Registers of St. Mary's, Whitechapel.] L. C.

CRADOCK, MATTHEW (*d.* 1641), first governor of the Massachusetts Company, was of a Staffordshire family. One Matthew (son of George) Cradock of Stafford was mayor of that town in 1614; married Elizabeth Fowler of Harnedge Grange, Shropshire, 28 April 1612; built a mansion on the site of Caverswall Castle, Staffordshire; was recorder of Stafford in 1620; was elected M.P. for the borough, 1624, 1625, 1628; he had a son George, who entered the Inner Temple in 1632, and died in 1643. The identity of this Matthew Cradock with the colonial merchant is possible. In 1618 the latter was described as in London, and an 'adventurer' trading to the East Indies. He purchased 2,000*l.* stock in the East India Company in 1628. When the company for colonising Massachusetts was formed (4 March 1627–8), Cradock, who subscribed largely to the funds, was chosen the first governor on 13 May 1628. He was very zealous in the performance of his duties; sent John Endicott to represent the company in the colony, and in a letter to Endicott dated 16 Feb. 1628–9, 'from my house in St. Swithen's Lane, near London Stone,' warned the colonists against the peaceful advances of the Indians, and recommended them to employ themselves in building ships. In 1629 the government perceived signs of prosperity in the Massachusetts Company, and Cradock, a strong parliamentarian, was resolved that Charles I should take no share of the profits. He therefore recommended the transference of the headquarters of the company to New England. John Winthrop was elected governor in his place, and sailed to Massachusetts at the close of 1629. Cradock, who took leave of the emigrants off the Isle of Wight, remained behind to assist the company in England, but sent servants and agents and secured a plantation for himself at Medford. 'On the east side of Mistick river is Mr. Cradock's plantation, where he hath impaled a park, where he keeps his cattle till he can store it with deer. Here likewise he is at charges of building ships. The last year one was upon the stocks of a hundred tons. That being finished, they are to build one twice the burden' (Wood, *New England's Prospect*, 1633, cap. x.) In 1630 Cradock and others petitioned the council for permission to export provisions freely to the colonists, who were represented as being in great straits from want of food and the attacks of the Indians, 29 Sept. 1630 (*Cal. State Papers*, Colonial, 1574–1660, p. 121). Six letters written by Cradock to Winthrop in 1636 show the value attached to Cradock's advice and monetary aid. In one letter Cradock promises 50*l.* to the projected Harvard College. In 1640 Cradock was returned as M.P. for London to the Short and Long parliaments. When the latter opened he denounced the king's plan of fortifying the Tower, and declared that the city would not contribute to the taxes till the royalist garrison was removed. On 4 May 1641 he announced a rumour that the army in the north was being armed with a view to active service. Ten days later he was on a committee

for recusants. He died suddenly, in the midst of his parliamentary labours, on 27 May 1641 (SMITH, *Obituary*, Camd. Soc. p. 18). In 1628–9, when Sir Edward Dering was wooing the rich widow, Mrs. Elizabeth Bennett, daughter of William Cradock of Stafford, he sought the aid of Cradock, who was the lady's cousin (*Proceedings in Kent*, Camd. Soc. pref.) One Rebekkah Cradock, described as widow of Matthew Cradock, was in 1670 the wife of Benjamin Whichcot, D.D., and her son, Matthew Cradock, was alive in 1672.

Coll. v. ii. 100.] S. L.

CRADOCK, SAMUEL, B.D. (1621?–1706), nonconformist tutor, was born about 1621. He was an elder brother of Zachary Cradock, D.D. [q. v.] He entered Emmanuel College, Cambridge, as a pensioner from Rutland, and was elected fellow of Emmanuel in 1645. On 10 Oct. 1649 he was incorporated M.A. at Oxford. His public performance on taking his B.D. in 1651 at Cambridge was 'highly applauded,' says Calamy. He resigned his fellowship in 1656 on accepting the college living of North Cadbury, Somersetshire, a rectory then worth 300*l.* a year. Here he devoted himself most assiduously to the work of the ministry, till he was ejected by the Uniformity Act of 1662. By the death of George Cradock he had become next heir male to Walter Cradock of Geesings, in the parish of Wickhambrook, Suffolk, who, dying shortly after Cradock's ejectment, left him his estate. Hereupon he took as his motto, 'Nec ingratus nec inutilis videar vixisse.' Some years later he took his family to Geesings, and on the declaration of indulgence (15 March 1672) he obtained a license (2 April) for himself as a 'presbyterian teacher,' and for his house as a place of worship. For twenty-four years he continued his ministrations gratuitously, living in good style as a country gentleman, and on excellent terms with Cowper, the vicar of Wickhambrook. He was never molested, and even when he opened under his own roof, prior to the Toleration Act, an academy for training young men in philosophy and theology, he escaped the interferences with which other nonconformist tutors were visited. Sons of presbyterian peers and gentry frequented his academy. Calamy, who was his pupil in philosophy (1686–8), gives a list, not exhaustive, of twelve who were his contemporaries, including his classmate Timothy Goodwin, then studying with a view to medicine, eventually promoted to the archbishopric of Cashel. The question arose whether nonconformist tutors were not violating their graduation oaths by prelecting outside the universities. Cradock drew up his reasons for believing that the oath referred simply to lectures in order to a degree. All the early nonconformist tutors lectured in Latin. Cradock's lectures were compilations, the systematic arrangement being his own; each student was expected to transcribe them. Calamy speaks very highly of the moral effect of Cradock's discipline, which was wise and friendly, and not too severe. The tutor was a pleasant and genial man, who enlivened his conversation with a spice of humour. Provision having been made on an adjoining estate in 1695 for the performance of dissenting worship at Wickhambrook, Cradock removed in 1696 to Bishop's Stortford, where he continued to preach, and soon became pastor of a congregational church in the neighbouring village of Stansted-Mountfitchet (meeting-house erected about 1698). He was able to preach twice every Sunday till within a fortnight of his death on 7 Oct. 1706, in his eighty-sixth year. He was buried at Wickhambrook 11 Oct.

He published: 1. 'Knowledge and Practice,' &c., 1659, 8vo; reprinted, 1673, 4to; supplement, 1679, 4to; enlarged edition, 1702, fol. (portrait). Dedication to master and fellows of Emmanuel, dated 5 May 1659; recommendatory epistle by Edward Reynolds, afterwards bishop of Norwich; written for his congregation at North Cadbury, and a copy presented to every parishioner; Doddridge and Orton speak of it, with reason, as one of the best manuals for a young minister. 2. 'The Harmony of the Four Evangelists,' &c., 1668, fol.; reprinted 1669, 1670, 1684, 1685 (revised by Tillotson, whose 'care had preserved it from the flames' in September 1666, during the great fire). 3. 'A Catechism,' &c., 1668 (Palmer). 4. 'The Apostolical History,' &c., 1672, fol. reprinted 1673. 5. 'A Serious Dissuasive from . . . Sins of the Times,' &c., 1679, 4to. 6. 'The History of the Old Testament methodised,' &c., 1683, fol.; reprinted 1695, translated into Latin, Leyden, 1685, 8vo. 7. 'A Plain and Brief Exposition and Paraphrase on the Revelation,' &c., 1690, 8vo; reprinted 1692, 1696.

CRADOCK, WALTER (1606?–1659), puritan divine, was born of a gentleman's family at Trevela, in the parish of Llangwmucha, Monmouthshire, where, from his ancestors, he derived an estate of 60*l.* a year. He was educated at Oxford, and became curate first at Peterston-upon-Ely, Glamorganshire, and afterwards to William Erbury, vicar of St. Mary's, Cardiff. In consequence, however, of his puritanical opinions, he was deprived of his curacy by the Bishop of Llandaff, who described him as 'a bold, ignorant young fellow.' He then went to Wrexham, where he officiated as curate for nearly a year. Afterwards he appears to have resided at Llanvair Waterdine, Herefordshire, under the patronage of Sir Robert Harley of Brampton Bryan. Thence he made excursions into the neighbouring counties, establishing in some of them settled congregations. Subsequently he succeeded the Rev. William Wroth as pastor of the congregational church at Llanvaches, Monmouthshire, and about 1646 he was appointed preacher at Allhallows-the-Great, London. He was one of the commissioners or triers appointed on 20 March 1653–4 for the approbation of public preachers. He died at Trevela on 24 Dec. 1659, and was buried in the chancel of the church of Llangwmucha.

He was the author of: 1. 'The Saints Fulnesse of Joy in their fellowship with God,' a sermon preached before the House of Commons 'in Margarets Westminster,' 21 July 1646, being the day appointed for thanksgiving for the surrender of Oxford, London, 1646, 4to. 2. 'Gospel-Libertie,' a collection of twelve sermons, Lond. 1648, 4to. 3. 'Divine Drops distilled from the Fountain of Holy Scriptures,' Lond. 1650, 4to. 4. 'Gospel-Holinesse, or, the saving sight of God,' Lond. 1651, 4to.

His collected 'Works' were published at Chester, 1800, 8vo, by the Rev. T. Charles of Bala and the Rev. P. Oliver of Chester.

[Life prefixed to Works; Williams's Eminent Welshmen; Wood's Athenæ Oxon. (Bliss), iii. 360, 878, Fasti, ii. 124; Hanbury's Memorials, iii. 422; Cat. of Printed Books in Brit. Mus.; Rees's Nonconformity in Wales, 2nd ed. p. 46.] T. C.

CRADOCK, ZACHARY (1633–1695), provost of Eton, was brother of Samuel Cradock [q.v.] His father was settled in Rutlandshire. He was educated at Emanuel, and Queen's College, Cambridge, and elected fellow of the latter 2 Aug. 1654. In 1656 Ralph Cudworth recommended him to secretary Thurloe as resident chaplain at Lisbon, and he held the post for several years (Thurloe, *Papers* v. 522; *Cal. State Papers*, 1657, p. 466). He became canon of Chichester 11 Feb. 1669–70, and fellow of Eton College in December 1671. He was also chaplain in ordinary to Charles II. On 24 Feb. 1680–1 he was elected provost of Eton, in succession to Richard Allestree [q. v.], and in opposition to Edmund Waller the poet, who, according to Wood, 'had tugged hard for it.' In June 1695 it was reported that the deanery of Lincoln was offered him. He died in September 1695, and was buried in Eton college chapel. He was very celebrated as a preacher. Evelyn the diarist was acquainted with him and frequently visited him at Eton. A sermon by him was preached before the king, 10 Feb. 1677–8, was published in 1678, and went through five editions before 1695. It was reissued in 1740 and in 1742. Another sermon was issued posthumously in 1706.

[Wood's Athenæ Oxon. (Bliss), iii. 1272; Harwood's Alumni Etonenses, 29; Evelyn's Diary, ii. 353, 355, iii. 19; Luttrell's Relation, i. 68, iii. 489, 536, 538.] S. L.

CRAFT, WILLIAM H. (*d.* 1805?), enamel-painter, a prolific artist, was employed at the Battersea enamel works. He was probably a relation, perhaps a son, of Thomas Craft, who was employed at the porcelain works at Bow, and executed the bowl now in the British Museum, to which he affixed an account of its production, rendering it one of the few pieces of Bow china that have been authenticated. William Craft exhibited numerous enamels at the Royal Academy in the years 1774–1795. They were mostly decorative subjects, but there were some portraits, including one of Major André. Enamels by him on copper signed 'W. H. Craft' are sometimes met with, but are not common. Lady Charlotte Schreiber notes some vases dated 1787–8, and snuff-boxes with heads of Nelson and others; also a memorial piece of Britannia between Howe, Nelson, Duncan, and St. Vincent. In 1862, at the Archæological Institute, an enamel on gold by Craft was exhibited by Mr. J. P. Fischer, and a large enamel on copper, representing a rural scene, by Mr. Wilson; the latter belonged to Charles Octavius Swinnerton Morgan [q. v.] A portrait of Sir William Hamilton, dated 1802, belonged to Sir Augustus Wollaston Franks, K.C.B.;

it is hard, but clever in execution. Earl Spencer has a miniature of Lavinia, countess Spencer, after Reynolds, signed and dated 1787, which was exhibited at the Exhibition of Miniatures in 1865. Craft is stated to have died in 1805.

[Redgrave's Dict. of Artists; Graves's Dict. of Artists, 1760–1880; Chaffers's Marks and Monograms on China; Journal of the Archæological Institute, 1862; Catalogue of the Special Exhibition of Miniatures, 1865; Royal Academy Catalogues; private information.] L. C.

CRAGGS, JAMES, the elder (1657–1721), postmaster-general, was the eldest son of Anthony Craggs of Holbeck, in the parish of Wolsingham, Durham, and Anne, daughter of the Rev. Ferdinando Morecroft, rector of Stanhope in Weardale, and prebendary of Durham. He was born at Wyserley, and on 10 June 1657 was baptised at Wolsingham, in the county of Durham. He was educated at the free school at Bishop Auckland, and on attaining the age of twenty-one joined with his father in cutting off the entail and selling the whole of the small family property. At the age of twenty-three he went up to London, where he obtained employment in various capacities. His early career is involved in considerable obscurity, and though the assertion that he commenced life as a country barber is probably untrue, it is quite likely that his earlier occupations were not of the very highest character. In 1684 he was steward to the Duke of Norfolk. He afterwards became attached to the household of the Duke of Marlborough, where his shrewdness and administrative ability attracted the attention of the duchess, who entrusted him with the management of her business affairs.

On 4 March 1695, Craggs, who was at this time engaged in business as an army clothier, refused to submit his books to the commissioners appointed to examine the public accounts of the kingdom. Three days afterwards being ordered to attend the House of Commons, he was committed to the Tower for obstructing the inquiry into the disposal of the public moneys (*Parl. Hist.* vol. v. cols. 892–5).

Through the influence of the duchess he was returned in 1702 as one of the members for the borough of Grampound, which he continued to represent until the dissolution of Anne's fourth parliament in August 1713. In 1702 he was one of the committee of the East India Company, and for several years held the posts of clerk of the deliveries, and secretary of the ordnance office, over which his patron, the Duke of Marlborough, presided. Though he lost these last two appointments in the last year of the queen's reign, he was reappointed clerk of the deliveries on 19 Nov. 1714, and in the early part of the following year was made joint postmaster-general with Charles, fourth lord Cornwallis. Though not a director of the South Sea Company, when the crash came, Craggs was deeply involved in its transactions. He was examined before the secret committee of inquiry appointed by the House of Commons at the beginning of 1721. From their third report, which was not considered by the house until after his death, it appeared that no less than 40,000*l.* of South Sea stock had been taken in and paid for out of the cash of the company for his use and benefit, and that 30,000*l.* of this had actually been transferred to him. An act was afterwards passed by which all the property which he had acquired since 1 Dec. 1719 was confiscated for the relief of the sufferers by the collapse of the bubble. One of the recitals of this act (7 Geo. I, c. 28) sets out that 'James Craggs the elder, esquire, was a notorious accomplice and confederate with the said Robert Knight, and some of the late directors of the South Sea Company, in carrying on their corrupt and scandalous practices; and did by his wicked influence and for his own exorbitant gain promote and encourage the pernicious execution of the late South Sea scheme.' Craggs died on 16 March 1721, and was buried in the churchyard at Charlton in Kent, where there is a monument to his memory. He is supposed by some to have committed suicide by taking poison, but the cause of his death is stated to have been 'a lethargick fit.' His death was probably accelerated by his grief at the loss of his son, for whom he had been amassing a huge fortune, and the anxiety of mind occasioned by the impending disclosures. He is reported to have left behind him an estate valued at one million and a half. Craggs was a man of great energy of character, extraordinary financial ability, and marvellous assurance. He was also remarkable 'for his talent in reading men, and by a peculiar way of gaining on the minds of those he dealt with.' Troubled with few scruples he was the beau idéal of a successful speculator and floater of bubble companies. 'Once when he was entrusted with Lord Sunderland's interests while the latter attended the king to Hanover, Walpole and his party got hold of some story very much against Lord Sunderland, which it was impossible to counteract by any common means. Old Craggs sent to Sir Robert Walpole to see him, and acknowledged the fact, but told him if the least use was attempted to be made of it he would

that moment go before the lord mayor and swear that he, Walpole, had a conversation with the Pretender. Walpole said that it was a gross falsehood. Craggs said that might be, but he would swear it, and accompany it with such circumstances as would make it believed, and that Walpole knew he was able and capable of it' (*Life of William, Earl of Shelburne*, 1875, i. 40-1). Craggs married Elizabeth, daughter of Jacob Richards, and sister of Brigadier Michael Richards, surveyor-general of the ordnance. She died on 20 Jan. 1711, and was buried at Charlton. By her he had three sons and three daughters. James [q. v.], who afterwards became secretary of state, was the only son who survived infancy. His three daughters all married well. Margaret became the wife first of Samuel Trefusis, and secondly of Sir John Hinde Cotton, bart.; Elizabeth married Edward Eliot of Port Eliot; and Anne was successively the wife of John Newsham, John Knight, and Robert, first earl Nugent [see NUGENT, ROBERT]. As his son predeceased him, the manors of Kidbrooke and Catford in the county of Kent, which he had purchased from the trustees of Ralph, first duke of Montagu, descended to his daughters as coheiresses. The portrait of Craggs which was painted in 1709 by Sir Godfrey Kneller has been engraved by Vertue. Another portrait by Sir James Thornhill is in the possession of the Earl of St. Germans at Port Eliot.

[For authorities see under JAMES CRAGGS the younger.] G. F. R. B.

CRAGGS, JAMES, the younger (1686-1721), secretary of state, second son of James Craggs the elder [q. v.], was born in the city of Westminster on 9 April 1686. He was sent to school at Chelsea, but before he had completed his education went to travel on the continent. He visited the courts of Hanover and Turin, spending a considerable time at the former court, where, through the influence of the Countess of Platen, he gained the favour of the elector. He was afterwards appointed resident to the king of Spain at Barcelona, and was in Flanders at the commencement of the campaign of 1709. In September 1713 he was returned to the House of Commons for the borough of Tregony, and on the day before the queen's death was despatched by the council to Herrenhausen to inform George of the measures which had been taken by them to secure his succession to the throne.

Some months after the journey he was rewarded with the post of cofferer to the Prince of Wales. At the general election in January 1715 Craggs was again returned for Tregony, and on 13 April 1717 was appointed secretary at war in the place of William Pulteney, afterwards earl of Bath. Upon Addison's retirement Craggs succeeded him as one of the principal secretaries of state, with the charge of the southern department, and on the same day (16 March 1718) was sworn a member of the privy council. Though his political career had been remarkably rapid, Craggs's wonderful mastery of detail and readiness in debate enabled him quite to hold his own against Walpole in the House of Commons. Oldmixon relates that Addison 'was pleased to say of his successor to me, that he was as fit a man for it as any in the kingdom; and that he never knew any man who had a greater genius for business, whether in parliament or out of parliament, than young Mr. Craggs, as (continu'd he) will appear by his conduct' (*History of England*, 1735, p. 659). Unfortunately for his reputation he became implicated in the affairs of the South Sea Company. There is, however, but little evidence against him in the seven reports of the secret committee, and the most that can be laid to his charge is that at his suggestion the Duchess of Kendal and other ladies were bribed with presents of stock in order to facilitate the passing of the company's bill through parliament.

On 4 Jan. 1721 Shippen, who had on a previous occasion denounced 'the contrivers and executors of the villainous South Sea scheme as the parricides of their country,' declared in the house that 'in his opinion there were some men in great station, whom in time he would not be afraid to name, who were no less guilty than the directors.' Upon this Craggs immediately rose and replied that 'he was ready to give satisfaction to any man who should question him either in that house or out of it.' After considerable uproar, which was occasioned by this reply, he explained that 'by giving satisfaction he meant clearing his conduct.'

A few weeks after this incident he was taken ill with small-pox, which was then very prevalent, and died on 16 Feb. 1721, in the thirty-fifth year of his age. He was buried at Westminster Abbey on 1 March, Spencer Compton the speaker being one of the pall-bearers. Though buried in the north aisle of Henry VII's Chapel, where his coffin rests upon that of his friend Addison, his monument stands in the baptistery. The unflagging interest which Pope took in the erection of this monument, and his opinion that Guelfi's work would make the finest figure in the place, will be found in his letters to Craggs's sisters. The epitaph, written by Pope, partly in Latin and partly in English, is given in

Johnson's 'Life of Pope' (JOHNSON, *Works*, 1810, xi. 205–6), accompanied by a severe criticism on 'the absurdity of joining in the same inscription Latin and English, or verse and prose.' The verses were not, however, originally written by Pope for this occasion, but were taken, with one or two necessary alterations, from the conclusion of his 'Epistle to Mr. Addison occasioned by his Dialogues on Medals.' Handsome in appearance, with charming manners and a ready tongue, Craggs was everywhere a popular favourite. While on his deathbed, Addison in a delightful letter, which was probably the last he ever wrote, dedicated his works to him and implored his patronage for Tickell, his literary executor. Pope, with whom he was very intimate, was never tired of singing his praises, and nearly twenty years after his death makes a graceful allusion to him in the epilogue to the 'Satires' (*Dialogue*, ii. lines 66–9). Gay also speaks of him as 'Bold, generous Craggs, whose heart was ne'er disguised' (*Mr. Pope's Welcome from Greece*, st. xiii.) Horace Walpole, it is true, sneers at him as 'a showy vapouring man,' but the young politician whom Sunderland had selected to oppose his father in the House of Commons was naturally a fit object for Walpole's depreciation. Craggs never married. His natural daughter, Harriot, married Richard Eliot on 4 March 1726. Their eldest son, who was created Baron Eliot in 1784, took the additional name of Craggs by royal license dated 15 April 1789. Her second husband, the Hon. John Hamilton, brother of James, first viscount Hamilton, was drowned off Portsmouth on 18 Dec. 1755. Her only child by her second marriage succeeded his uncle as the second viscount, and was afterwards created marquis of Abercorn. She died in 1769, and was buried at St. Germans. Three portraits of Craggs, by Sir Godfrey Kneller, are in the collection of the Earl of St. Germans at Port Eliot, one of which was exhibited in the second loan collection of national portraits in 1867 (*Catalogue*, No. 225). Among the Ashburnham manuscripts, reported on in the eighth report of the Historical MSS. Commission (app. ii.), are a number of letters addressed to Craggs by the Duke and Duchess of Marlborough and many of the leading politicians of the day.

[In addition to the books referred to in the articles on the two Craggs, the following works, among others, have been consulted: Miscellanea Genealogica et Heraldica, ii. 34–9, 43, 46; Hasted's Kent (1778), i. 42, 73–4; Lord Mahon's History of England (1839), i. 393, 448, ii. 29–30; Macaulay's History of England, iv. (1885), 547; Coxe's Memoirs of Sir Robert Walpole (1798); Horace Walpole's Letters (1857); Roscoe's Works of Alexander Pope (1824); Addison's Works (Bohn's edit.); The Letters and Works of Lady M. W. Montagu (1837), i. 38–40, 116–19, iii. 155; Private Correspondence of the Duchess of Marlborough (1838); The Marlborough Despatches, ed. Sir G. Murray (1845); Granger's Biographical History (Noble, 1806), iii. 176–80; Georgian Era (1832), i. 536; Parl. History, vols. v. and vii.; Historical Register for 1714 and 1721; Stanley's Westminster Abbey (1882), pp. 219–21; Haydn's Book of Dignities (1851); Eighth Report of the Historical Manuscripts Commission; Calendar of Treasury Papers, 1708–14, 1714–19; Official Return of Lists of Members of Parliament, pt. i. p. 600, pt. ii. pp. 1, 9, 19, 30, 38.] G. F. R. B.

CRAIG, ALEXANDER (1567?–1627), poet, born at Banff about 1567, was educated in the university of St. Andrews, where he took his degree of master of arts in 1586. At the accession of James he came to London in the hope of obtaining preferment, and in 1604 published 'The Poetical Essayes of Alexander Craige, Scots-Britane,' 4to, in which he pays many fulsome compliments to the king and queen. There is a sonnet by Sir Robert Aytoun, in the author's praise, at the end of the book. Craig's flattery was not applied in vain, for on 9 Dec. 1605 he received from James a pension of 600 merks, or 400*l.* Scots money. At the next meeting of the Scottish parliament an act of ratification of the pension was passed, on 11 Aug. 1607. Having been successful in his pilgrimage, he returned to Scotland and settled at a spot that he calls Rose-Craig, probably situated in the neighbourhood of Banff. In 1606 appeared 'The Amorose Songes, Sonets, and Elegies of Mr. Alexander Craige, Scots Britane,' 8vo, dedicated to Queen Anne. The best things in this dull collection are some verses in imitation of Marlowe's 'Come live with me and be my love,' and of Sir Walter Raleigh's 'If all the world and love were young.' It was followed in 1609 by 'The Poetical Recreations of Mr. Alexander Craige of Rosecraig,' Edinburgh, 4to, dedicated to the Earl of Dunbar. One of the pieces is a 'Complaint to his Majestie,' in which the poet deplores his poverty. In 1623 Craig published at Aberdeen another volume of 'Poeticall Recreations,' 4to, consisting chiefly of epigrams. From some copies of verses in this collection (addressed to the Earl of Mar) it appears that the poet had some difficulty in getting his pension regularly paid. Craig died in 1627. A posthumous poem entitled 'The Pilgrime and Heremite, in forme of a Dialogue' (of which a unique copy, wanting sig. B, four leaves, is preserved at Britwell), was published by William Skene in 1631 at Aberdeen, 4to. Some verses in Alexander

Gardyne's 'Garden of Grave and Godlie Floures,' 1609, are addressed to Craig, who perhaps wrote the first of 'Certaine Encomiastick Poesies to the Author,' prefixed to that work. Among the complimentary verses (not found in ed. 1709, but preserved in the author's manuscript) prefixed to Gardyne's 'The Theatre of the Scotish Kings,' is a copy of verses by Craig, who also contributed some prefatory verses to 'The Famous Historie of the Renowned and Valiant Prince Robert, surnamed the Bruce, King of Scotland,' Dort, 1615. Some verses of Craig are in John Adamson's 'The Muses' Welcome,' 1618, and he wrote some commendatory verses to 'The Staggering State of Scots Statesmen,' by Sir John Scot of Scotstarvet, first printed in 1754. Dr. William Barclay, in 'Nepenthes, or the Vertues of Tobacco,' 1614, addresses a short poem to Craig. In 1873–4 a collective edition of Craig's poems, which are very rare and very worthless, was issued by the Hunterian Society, with an introduction by David Laing.

[David Laing's Introduction to the Hunterian reprint of Craig's poems.] A. H. B.

CRAIG, JAMES (*d.* 1795), architect, was the son of William Craig, merchant in Edinburgh, and Mary, youngest daughter of the Rev. Thomas Thomson of Ednam, Roxburghshire, and sister of James Thomson the poet [q. v.] Craig was a pupil of Sir Robert Taylor [q. v.], and in 1767 sent in a 'plan of the new streets and squares intended for the city of Edinburgh' for a competition instituted by the authorities of that city, who were desirous of extending it by buildings laid out in a more modern style. Craig adopted as the keynote of his design some lines from his uncle's poem on 'Liberty:'—

August, around, what public works I see!
Lo! stately streets! lo! squares that court the breeze!
See! long canals and deepened rivers join
Each part with each, and with the circling main
The whole enlivened isle——;

and therefore planned a series of exact squares and parallelograms, in which the North Loch was preserved as a long canal with formal buildings on each side. This plan, though utterly destitute of inventive ingenuity or any regard for the natural features of the ground, was accepted with acclamation by the magistracy of Edinburgh; they presented Craig with a gold medal bearing the city arms and the freedom of the city in a silver box, and his plan was engraved by P. Begbie and published in 1768 with a dedication to George III. Hence arose that portion of Edinburgh known as the New Town. One of the principal buildings erected by Craig, as part of this design, was the Physicians' Hall, 'a chaste Grecian edifice,' the foundation-stone of which was laid by Dr. Cullen [q. v.] in 1774, and which was destined to be an enduring monument of Craig's architectural genius. It has been since pulled down to make way for the Commercial Bank of Scotland. Craig subsequently modified his original design by introducing a circus in the centre of George Street, and in 1786 issued a quarto pamphlet with engravings, containing a scheme for a further remodelling of the Old Town. Fortunately the mania for improvement died out before this could be carried into execution. Craig died in Edinburgh 23 June 1795. There is a portrait of him seated among his architectural designs in the Scottish National Portrait Gallery.

[Redgrave's Dict. of Artists; Wilson's Memorials of Edinburgh; Nagler's Künstler-Lexikon; Gent. Mag. (1795), lxiii. 615.] L. C.

CRAIG, SIR JAMES GIBSON (1765–1850), politician, second son of William Gibson, merchant, was born in Edinburgh on 11 Oct. 1765. His ancestor, Sir Alexander Gibson, lord president of the court of session in the reign of James VI, married the eldest daughter of Sir Thomas Craig of Riccarton, the feudal lawyer of Scotland [q. v.] In 1823 James Gibson succeeded under entail to the estate of Riccarton (Midlothian), and took the additional name of Craig.

He was educated at the high school, Edinburgh. In 1786 he was admitted a writer to the signet, and for sixty-four years he carried on the business of a law agent with eminent success, gaining the confidence of many who, on public grounds, were ardently opposed to him. His political activity dated from his early manhood, and at that time a bold adherence to the whig cause was not without sensible dangers. In a biographical sketch of his friend Allen [see ALLEN, JOHN, M.D.], he describes a dinner given in Edinburgh to celebrate the fall of the Bastille, in the organisation of which he and Allen took a leading part. After every effort had been made to prevent this demonstration, the guests as they entered had their names taken by the police, while the sheriff of the county and another person were subsequently discovered in an adjoining room noting down as much of the proceedings as could be heard through the partition. Cockburn in his life of Jeffrey, paying a warm tribute to Craig's public services, declares he was 'so prominent in our worst times that it is difficult to understand how Thomas Muir could be transported

and James Gibson (his original name) not be even tried.'

Craig was soon recognised as the natural leader of the Scotch whigs, and in Scotland no one bore so great a part in the struggles of the pre-reform era. His personal appearance harmonised with the mental qualities by which he impressed himself on his contemporaries. A giant frame and massive features were the complement of a courageous, enthusiastic, and energetic nature. It was remarked of him that the very tramp of his top boots seemed to inspire confidence and the hope that springs from resolute exertion. When public discussion was necessary he generally avoided all prominent positions: he was content by previous management to insure that the practical outcome was to the purpose. All the needy patriots in Scotland resorted to him; he helped them alike with money and personal influence. Craig and Jeffrey, though staunch friends and colleagues, had their differences; Jeffrey did not always sympathise with Craig's zeal, and Cockburn records that he had not infrequently, especially when lord advocate, to check his 'interference.' Craig was, indeed, somewhat wilful and fond of his own way, though his wilfulness was tempered by sound judgment.

He was one of the victims of the scurrilous 'Beacon' newspaper, whose quarrels, taken up by the 'Sentinel,' led to the fatal duel between James Stuart and Sir Alexander Boswell [see Boswell, Sir Alexander]. Shortly before this event, on the discovery of the prominent members of the tory party who had provided funds for the 'Beacon,' Stuart opened a plainly hostile correspondence with the lord advocate, and this Craig followed by a communication of a similar character to Sir Walter Scott. A duel in the latter case was only prevented by Scott's friends, who came forward with 'a proposal that this and all similar calls should be abandoned on an assurance that Scott had no personal accession to any of the articles complained of, and that the paper should be discontinued' (Cockburn, *Memorials*). Nine years later (1830) Craig is found in a more gratifying relation to Scott by taking a leading part in restoring to him, after his bankruptcy, his library furniture and other personal possessions at Abbotsford.

After the passing of the first Reform Bill Craig's political activity abated. The government of Lord Grey made him (1831) a baronet —the only reward he ever received for his services. During the remainder of his life his public appearances were infrequent, and some of the questions that prompted his intervention were local, though involving important principles. He thus found occasion to maintain with equal tenacity the claims of protestant dissenters and Roman catholics to all the privileges and honours of citizenship. In the controversy which ended in the disruption of the church of Scotland in 1843 he separated himself from his political friends, not on the original question (the appointment of ministers contrary to the wishes of congregations), but because he thought the 'spiritual independence' claimed by the free church party a danger to the state. He died at Riccarton on 6 March 1850, in his eighty-fifth year. His sons William and James are separately noticed.

[Scotsman, 9 March 1850; Encyclop. Brit. 8th ed. vii.; Cockburn's Life of Jeffrey, i. 250–2; Cockburn's Memorials of his Time, pp. 381–3; Lockhart's Life of Scott, chap. lxxix.; Allen's Inquiry into the Rise and Growth of the Royal Prerogative in England, 1849 (biographical sketch prefixed to).] J. M. S.

CRAIG, Sir JAMES HENRY (1748–1812), general, was the son of Hew Craig, for many years civil judge at Gibraltar and judge-advocate-general to the forces stationed there, who was a member of the family of the Craigs of Costarton and Dalnair. He did not enter the army as a private in the guards, as has been falsely asserted, but was gazetted to an ensigncy in the 30th regiment at the age of fifteen, on 1 June 1763. This regiment was then stationed at Gibraltar, but Craig was allowed to go on leave to complete his military education, which he did in the best military schools on the continent. On returning to Gibraltar he was appointed aide-de-camp to General Sir Robert Boyd, K.B., the lieutenant-governor of the fortress, and was promoted lieutenant in his own regiment on 19 July 1769, and captain into the 47th on 14 March 1771. He resigned his staff appointment in 1774 to accompany his regiment to America, and was severely wounded in his first action, the battle of Bunker's Hill. In 1776 the 47th was transferred to Canada, and Craig commanded his company in the action of the Trois Rivières and the advanced guard of the English army in the expulsion of the American troops after their failure before Quebec. In 1777 he was present at the capture of Ticonderoga and of Hutchestown, where he was again wounded, as he was in the action at Freeman's Farm, and he distinguished himself so much in the early part of Burgoyne's advance upon Saratoga, that the general sent him home with the despatches announcing his early successes. For this news he was promoted

major without purchase into the newly raised 82nd regiment, with which he at once sailed for Nova Scotia. He served in Penobscot in 1779, and in North Carolina under Lord Cornwallis in 1781, either with his regiment or in command of light troops, and showed (to quote his biographer in the 'Scots Magazine') 'such fertility of resources and remarkable clearness of military judgment' that he was promoted lieutenant-colonel of the 82nd. On the conclusion of the war and the reduction of his regiment he was transferred to the lieutenant-colonelcy of the 16th regiment, which he commanded in Ireland until 1791, and in 1790 he was promoted colonel. During this period Craig spent much time on the continent, studying the Prussian tactics and discipline, and he corresponded upon military subjects with David Dundas, whose new system of exercises was first made use of in the 16th, Craig's own regiment. When the war with France broke out, Craig filled for a few months the posts of commandant of the troops at Jersey, and then of deputy-governor of Jersey, but in 1794 he was transferred to the staff of the army in the Netherlands, and made adjutant-general to the Duke of York's army.

In this capacity he gave the greatest satisfaction to the duke, but the English army was in an utterly disorganised state, and it was not in Craig's power to restore its efficiency in the face of the enemy. For his services he was promoted major-general on 3 Oct. 1794 while with the army, and on the conclusion of the disastrous war in the Netherlands he was appointed to command a force which was to sail from England, and co-operate with an army from India in the capture of the Dutch colony of the Cape of Good Hope. When Craig reached Simon's Bay he found that the army from India had not arrived, but he determined nevertheless to effect a landing with the few troops under his command, namely, the 78th regiment and some marines. Rear-admiral Keith Elphinstone vigorously supported him and lent him a thousand sailors, and after disembarking at Simon's Bay on 14 Aug. 1795 he began to advance along the coast upon Capetown. He stormed the Dutch camp at Mayzenberg, and took up his position there; but his situation soon became most critical, for the Dutch governor collected all the Boer militia, and prepared to attack him with a far superior force. Fortunately at this juncture Major-general Alured Clarke arrived from India with reinforcements, and the Dutch governor surrendered the colony to him on 14 Sept. When Major-general Clarke returned to India he left the civil government and military command of the Cape to Craig, who remained there until the arrival of Lord Macartney in 1797, when he was invested with the order of the Bath by a special commission from the king. On returning to England he was at once given the command of a division in Bengal, and on his arrival in India he took up the command of the troops in the Benares district. The difficulties of his position were very great, for the discontent of the company's officers was driving them into open mutiny, and that their loyalty was restored without actual mutiny was largely due to the firmness of Craig [see ABERCROMBY, SIR ROBERT]. He did not participate in any actual warfare in India, though he was nominated for the command of an expedition to Manilla, which did not take place, and he returned to England in 1802, on the news of his having been promoted lieutenant-general on 1 Jan. 1801. He took command of the troops in the eastern district until 25 March 1805, when, although in very bad health, he was made a local general in the Mediterranean, and ordered to proceed thither with a powerful army of over seven thousand men.

The history of this expedition to the Mediterranean is best told by Sir Henry Bunbury, who was Craig's quartermaster-general, in his 'Narrative of some Passages in the Great War against France,' and in the appendix to his book are to be found Craig's instructions and despatches (pp. 415–34), which show how vague were the projects of the ministry, and how great were the difficulties with which the general had to contend. His instructions were to co-operate with a Russian army in Italy, to land in the kingdom of Naples, and to march northward in order to act upon the flank of the great army of Napoleon, which was to be attacked in front by the combined Austrians and Russians. Craig disembarked his army of 7,300 men at Castellamare on 26 Nov. 1805, and General Lacy disembarked his thirteen thousand Russians at the same time, but the allied generals immediately received the news of the surrender of General Mack at Ulm, and of the retreat of the Archduke Charles. Craig at once saw how hopeless it was to attempt to defend the Neapolitan territory, yet at the earnest request of Lacy he consented to march on 9 Dec. and to take up a position with him on the northern frontier. Here, however, he received the news of the battle of Austerlitz, and then, in spite of the furious resistance of the queen, supported by the British minister, Hugh Elliot, he insisted upon returning to Castellamare and leaving Italy. He had no intention of leaving the Mediterranean, but he saw that, though Naples itself was indefen-

sible, Sicily could be successfully held against the French. In spite, therefore, of the queen and Elliot, he left Castellamare on 19 Jan. 1806, and disembarked at Messina on the 22nd. Subsequent experience showed how wise Craig had been, for Sicily became the headquarters of the English in the Mediterranean, and was successfully defended against all the attacks of the French. Craig's health, however, became worse and worse, and in March 1806 he left Sicily, and handed over the command to Major-general John Stuart, afterwards to be known as the Count of Maida. The voyage to England did him good, and on 21 Aug. 1807 he was made a local general in America, and on 29 Aug. appointed captain-general and governor-general of Canada. Here too he had a difficult post to fill. The discontent of the United States at the naval policy of England was growing to a height that threatened war, and the population of Canada was too French in its origin to be well affected to the government. Nevertheless, here, as everywhere else, Craig proved himself to be an able administrator, he avoided a collision with the United States, and made himself loved and respected by the Canadians. He resigned his government in October 1811, and on his return to England was promoted general on 1 Jan. 1812. Eleven days later he died at his house in London. He was colonel 46th foot 1795–1804, of 86th foot 1804–06, of 22nd foot 1806–09, and of 78th foot 1809 till death. From 1806, too, he was governor of Blackness Castle.

Craig was a general who showed his ability in many places and many commands, but his fame has been overshadowed by that of the Duke of Wellington and of the duke's lieutenants in the Peninsula. 'Sir James Craig was a man who had made his way by varied and meritorious services to a high position in our army. He had improved a naturally quick and clear understanding by study, and he had a practical and intimate acquaintance with every branch of his profession. In person he was very short, broad, and muscular, a pocket Hercules, but with sharp, neat features, as if chiselled in ivory. Not popular, for he was hot, peremptory, and pompous, yet extremely beloved by those whom he allowed to live in intimacy with him; clever, generous to a fault, and a warm and unflinching friend to those whom he liked' (Bunbury, *Narrative*, p. 182).

[Scots Mag. for March 1813, pp. 165–7, which makes no mention of his having served as a trooper, a mistake adopted from the Gentleman's Magazine by Ross, the editor of the Cornwallis Correspondence, and others; for the expedition to the Cape see Allardyce's Life of Lord Keith, and for his command in the Mediterranean Sir Henry Bunbury's Narrative of some Passages in the Great War against France.]

H. M. S.

CRAIG, JAMES THOMSON GIBSON (1799–1886), antiquary, was the second son of Sir James Gibson Craig [q. v.], the first baronet of Riccarton. He received his education at the high school and the university of Edinburgh, and afterwards became a writer to the signet. He was the friend of Scott and Jeffrey, of Cockburn and Macaulay, of antiquaries from the time of Kirkpatrick Sharpe and David Laing to the time of George Scharf, of artists from the days of Sir Henry Raeburn and the elder Nasmyth to those of Sir William Fettes Douglas. An original member of the Bannatyne Club he was known for his literary and antiquarian tastes, and for his extensive collection of works in various languages. In 1882 he issued in an edition of twenty-five copies a sumptuous series of facsimiles of historic and artistic bookbindings in his collection, and in 1883 a facsimile reprint of the 'Shorte Summe of the whole Catechisme,' by his ancestor, John Craig, accompanied with a memoir of the author by Thomas Graves Law. He died at Edinburgh on 18 July 1886. A first part of his valuable library was sold in London in June 1887.

[Academy, 24 July 1886; Times, 26 July 1886; Lockhart's Life of Scott.] T. C.

CRAIG, JOHN (1512?–1600), Scottish divine, was born about 1512, and next year lost his father, one of the Aberdeenshire family of Craigs of Craigston, at Flodden. Educated at St. Andrews, and dependent on his own exertions for his support, Craig became tutor of the children of Lord Darcy, the well-known English warden of the north. Returning to St. Andrews after two years, he joined the Dominican order, but soon fell under suspicion of heresy and was imprisoned. On his release he went in 1536 to England, where he hoped to get a place at Cambridge through Lord Darcy's influence. Failing in this he proceeded to Rome, where the patronage of Cardinal Pole obtained his admission to the Dominican convent at Bologna as master of novices. He was employed in various missions on behalf of his order in Italy and the island of Chios, and on returning to Bologna became rector, an office he held for several years. Chance having thrown in his way a copy of the 'Institutes of Calvin,' it was said in the library of the Inquisition, his attention was again directed to the tenets of the reformed church, and this becoming

known he was sent to the prison of the Inquisition at Rome. Condemned to be burnt, he escaped execution of his sentence by the jubilee at the accession of a new pope on the death of Paul IV, or by a riot which set free the prisoners of the Inquisition. He was on the point of being re-arrested when wandering in the neighbourhood of Rome, and owed his escape to the commander of a band of soldiers, who recognised him as a monk who had rendered him services when lying wounded in Bologna. After a short stay in Bologna and Milan he went to Vienna, having received the necessary viaticum, according to a story told by his widow, but probably legendary, from a dog, which insisted, though repulsed, in forcing on him a purse it had found. At Vienna he preached as a Dominican, and was befriended by Maximilian, then archduke, who showed some leaning towards the reformed doctrines. Pius IV wrote, requiring the restitution of the two escaped prisoners of the Inquisition, but Maximilian, who had become his friend, gave him a safe-conduct through Germany to England. Reaching England in 1560, Craig preferred returning to his native country, where the reformation had been accomplished. Offering his services to the reformed church, he preached in Latin with much acceptance in the chapel of St. Magdalene, in the Cowgate of Edinburgh, and the following year was appointed minister of Holyrood. In April 1562 Knox requested that he might become his colleague in the high church, and this was carried out in 1563. His bold preaching against the nobles who seized the revenues of the church, so that 'we can nocht discern the earl from the abbot,' provoked the anger of Lethington, and in the memorable conference between that statesman and Knox in 1564 Craig backed his colleague's argument with a telling precedent of a discussion in the university of Bologna, where he had been present in 1554, and heard the thesis maintained 'that all rulers, be they superior or inferior, may and ought to be refused or deposed by them by whom they are chosen, empowered, and admitted to their office, as oft as they break their promise made by oath to their subjects, because the prince is no less bound to his subjects than subjects to their princes.' This had been applied, he said, in the case of a pope, whose governor had exceeded his limits and attempted to alter the law in part of his temporal dominions. 'Then started up,' narrates Knox, 'ane lawbreaker of that corrupt court, and said, "Ye know nocht what ye say, for you tell us what was done in Bononia; we are ane kingdom and thou are but ane commonwealth;" to which Craig had the ready answer, "My lord, my judgment is that evrie kingdom is, or at least should be, ane commonwealth, albeit that evrie commonwealth be nocht ane kingdom."'

Craig's name appears with that of Knox in the list of persons privy to Rizzio's death, sent by the Earl of Bedford and Randolph to Cecil. Proof of actual complicity is wanting, but there can be little doubt that the ministers of the reformed church approved the act after it was done, as Mary did the assassination of her brother Moray. The refusal by Craig to publish the banns between Mary and Bothwell is probably the act of his life most widely known. It certainly showed courage to remonstrate when Edinburgh was in the hands of Bothwell's followers. At an interview with Bothwell and the privy council Craig laid to his charge 'the law of adultery, the law of ravishing, the suspicion of collusion between him and his wife, the sudden divorcement and proclaiming within the space of four days, and last, the suspicion of the king's death, which her marriage would confirm.'

He got no explanation on any of these points, but a letter from Mary having been shown him denying that she was under restraint, he in the end proclaimed the banns with a protest that 'he abhorred and detested the marriage.' In the general assembly Craig was blamed by some of his brethren for his compliance, but a resolution was passed absolving him, while Adam Bothwell, the bishop who performed the ceremony, was suspended.

In 1571 Knox, who had quarrelled with Mary, left Edinburgh for St. Andrews, but Craig, of a more conciliatory disposition, remained, and even lamented in a sermon 'that there was no neutral man to make agreement between the two parties, seeing whatsoever party shall be overthrown the country shall be brought to ruin.' Although he gave offence by this lukewarm attitude, he was chosen by the convention of the kirk at Leith one of the deputies to wait upon the queen's friends in the castle. The outspoken part he took in the conference, when he was again pitted against Lethington, is recorded in the 'Memorials of Bannatyne,' who was himself present. Next year he was sent by the assembly to Montrose 'for the illuminating the north,' and when he had remained two years thence to Aberdeen to illuminate those dark places in Mar, Buchan, and Aberdeen, and to teach the youth of the college there.' In Aberdeen Craig remained six years, acting as a sort of superintendent of that district. Always a member of assembly, he was twice moderator. As a member of the committee of the assembly of 1575, to consider the question of

the episcopal office, he reported against it, and this report was followed by the abolition of episcopacy in 1581. In 1579 Craig, having been appointed one of the king's chaplains, returned to Edinburgh, when he took part in the composition of 'The Second Book of Discipline' and 'The National Covenant' of 1580.

In 1581, to meet a panic of a revival of papacy caused by the arrival of the Duke of Lennox from France, he wrote: 'Ane Shorte and Generale Confession of the true Christian Fayth and Religion, according to God's Worde and Actes of our Parliamentes.' This confession was signed by the king and his household, from which circumstance it received the name of the king's confession. It was required to be signed by all parish ministers, and in 1585 by all graduates. It was confirmed in 1590 and 1595, and became the basis of the covenant of 1638 as well as the solemn league and covenant of 1643. In October 1581 Craig was sent by the assembly to intimate their approval of the seizure of the king by the Earl of Gowrie in the raid of Ruthven, and boldly rebuked James for his conduct, drawing tears from him as Knox had done from Mary.

When parliament in 1584 passed the Black Acts restoring episcopacy and recognising the royal supremacy, Craig denounced them from the pulpit, and in answer to Arran and the court declared that 'he would find fault with everything that is repugnant to the word of God.' A conference at Falkland, where he was summoned by the king, gave rise to a stormy scene between him and Arran, who then ruled the court. Interdicted from preaching and threatened with banishment for refusing submission to the royal ordinance, Craig again tried to act the part of a mediator between the king and the extreme presbyterian party led by Melville, and proposed an addition to the oath required as to the king's supremacy in matters ecclesiastical 'as far as the word of God allows.' This compromise was accepted by the king, and the oath was so taken by Craig and the other royal chaplains, Erskine of Drum, and many of the ministers of the north. In 1585 a sermon he preached before parliament from the text, 'God sitteth among the assembly of the gods,' from which he deduced the duty of obedience to kings, was severely condemned. A curious discussion of it between the Earl of Angus and David Hume of Godscroft is given by Calderwood (*History*, iv. 466).

Craig was now in the decline of life, and his moderation did not please more youthful zealots. But he showed no signs of departing from the reformed doctrines. In 1590 he composed, at the request of the assembly, 'A Form of Examination before Communion,' and in 1593 James requested the assembly to choose a list from which he might select two in respect 'of Mr. Craig's decrepit age,' but he continued to hold his office of chaplain for some time longer. He died on 12 Dec. 1600. His wife and his son William were named executors of his will, but are requested to take the advice of his relative, Thomas Craig, advocate [see CRAIG, SIR THOMAS]. This son was a professor in the college of Edinburgh in 1599, but in the year of his father's death went to St. Andrews as professor of divinity, from which he afterwards returned to Edinburgh, where he died in 1616.

[Knox's History of the Reformation; Calderwood's History of the Kirk; Richard Bannatyne's Memorials; Craig's Catechism, reprinted with a valuable introduction by Mr. T. Graves Law, librarian of the Signet Library, 1885.]

Æ. M.

CRAIG, JOHN, M.D. (*d.* 1620), physician, third son of Sir Thomas Craig [q. v.], the eminent lawyer, was born in Scotland, graduated M.D. at Basle, settled in his native country, and became first physician to James VI, whom he accompanied to this country on that monarch's accession to the throne of England as James I. In 1604 he was admitted a member of the College of Physicians of London. He was incorporated M.D. at Oxford 30 Aug. 1605; was named an elect of the College of Physicians on 11 Dec. the same year; was consiliarius in 1609 and 1617; and died before 10 April 1620, when Dr. Argent was chosen an elect in his place.

He was the author of 'Capnuraniæ seu Comet. in Æthera Sublimatio,' a manuscript addressed to his friend Tycho Brahe. Some of his letters to that famous astronomer are printed in Rudolf August Nolten's 'Commercium litterarium clarorum virorum,' 2 vols. Brunswick, 1737–8.

Craig is generally believed to have been the person who gave John Napier of Merchiston the first hint which led to his great discovery of logarithms. Wood states that 'one Dr. Craig . . . coming out of Denmark into his own country called upon John Neper, baron of Murcheston, near Edinburgh, and told him, among other discourses, of a new invention in Denmark (by Logomontanus, as 'tis said) to save the tedious multiplication and division in astronomical calculations. Neper being solicitous to know farther of him concerning this matter, he could give no other account of it than that it was by proportionable numbers. Which hint Neper taking he desired him at his return to call upon him again. Craig, after some weeks

had passed, did so, and Neper then shew'd him a rude draft that he called "Canon mirabilis Logarithmorum,"' which, with some alterations, appeared in 1614. There seems, however, to be no foundation in fact for this oft-repeated story. It is a remarkable circumstance, not generally known, that Napier himself informed Tycho Brahe of his discovery twenty years before it was made public.

His son, JOHN CRAIG, M.D., became a fellow of the College of Physicians, and physician to James I and to his successor Charles I, both before and subsequently to his accession to the throne. He died in January 1654–5, and was buried in the church of St. Martin-in-the-Fields.

Craig attended James I in his last illness, and gave great offence at court by giving free expression to his opinion that his royal patient had been poisoned.

[Wood's Athenæ Oxon. (Bliss) ii. 491; Fasti, i. 310; Sloane MS. 2149, p. 63; Mark Napier's Memoirs of John Napier, pp. 361–5; Munk's Coll. of Phys. (1878), i. 116, 170; Burnet's Own Time (1823), i. 29; Gardiner's Hist. of England, v. 313.] T. C.

CRAIG, JOHN (*d.* 1731), mathematician, said to have been a Scotsman who settled in Cambridge, was a distinguished mathematician and a friend of Newton. He wrote several papers in the 'Philosophical Transactions,' and published two mathematical treatises, 'Methodus Figurarum . . . Quadraturas determinandi,' 1685, and 'Tractatus . . . de Figurarum Curvilinearum Quadraturis et locis Geometricis,' 1693. These writings were of some importance in the development of the theory of fluxions, and involved him in a controversy with James Bernoulli. In 1699 he published his curious tract, 'Theologiæ Christianæ Principia Mathematica.' He applies the theory of probabilities to show how the evidence is gradually weakened by transmission through successive hands. He argues that in 1699 the evidence in favour of the truth of the gospel narrative was equal to that represented by the statement of twenty-eight contemporary disciples; but that in the year 3144 it will diminish to zero. He infers that the second coming (at which period it is doubtful whether faith will be found on the earth) must take place not later than the last epoch. He afterwards calculates the ratio of the happiness promised in another world to that obtainable in this, and proves it to be infinite. In spite of his vagaries Craig was in 1708 collated by his countryman Bishop Burnet to the prebend of Durnford in the cathedral of Salisbury, which in 1726 he exchanged for the prebend of Gillingham Major. This had been held from 1698 to 1720 by a William Craig, who may probably have been a connection. He is said to have been 'an inoffensive, virtuous man,' and he showed his simplicity by living in London in his later years in hopes of being noticed for his mathematical abilities. The hope was disappointed, and he died in London 11 Oct. 1731. Besides the above he published 'De Calculo Fluentium libri duo,' 1718.

[Hutchins's Dorsetshire, iii. 218, 220, iv. 420; General Biographical Dictionary, 1761; Le Neve's Fasti, ii. 665, 668, 669; Hutton's Math. Dict.; Montucla's Histoire, iii. 127–8, 130; De Morgan's Budget of Paradoxes, pp. 77–8.]

CRAIG, SIR LEWIS, LORD WRIGHTSLANDS (1569–1622), judge, eldest son of Sir Thomas Craig [q. v.] of Riccarton, by Helen, daughter of Heriot of Trabroun, born in 1569, was educated at Edinburgh University, where he graduated M.A. in 1597. He studied the civil law at Poitiers, was admitted advocate at the Scotch bar in 1600, knighted and appointed an ordinary lord of session in 1604–5. He died in 1622.

[Brunton and Haig's Senators of the College of Justice.] J. M. R.

CRAIG, ROBERT (1730–1823), political writer, born in 1730, was the second son of James Craig, professor of law in the university of Edinburgh. He was admitted to the Scotch bar in 1754, and about 1756 he was appointed one of the judges of the Edinburgh commissary court. This office he resigned in 1791. For many years he and his elder brother Thomas lived together, neither ever marrying. On his brother's death in 1814 he succeeded to the estate of Riccarton, being the last male heir in the descent of Sir Thomas Craig the feudal lawyer [q. v.] He was a whig in politics. In 1795 he published anonymously 'An Inquiry into the justice and necessity of the present War with France.' This pamphlet is a vindication of the right of nations to remodel their institutions without external interference. He died in Edinburgh on 13 Feb. 1823 in his ninety-third year.

[Scots Mag. xii. 647; Anderson's Scottish Nation, i. 687.] J. M. S.

CRAIG, SIR THOMAS (1538–1608), Scottish feudalist, was the eldest son of William Craig of Craigfintray in Aberdeenshire, according to Mr. Tytler, or of William Craig, a citizen of Edinburgh, descended from the Craigfintray family, according to his earlier biographer and relative, Burnet. He was sent by his father at the early age of fourteen to St. Leonard's College, St. Andrews, where he received his education in

arts, which included Latin, logic, rhetoric, ethics, and physics. In 1555 he went to the university of Paris, then at the summit of its reputation, where he studied law—the canon under Peter Rebuffius and the civil under Francis Balduinus. Returning home in 1561 he completed his education under the advice of John Craig, afterwards the coadjutor of Knox, who had just come back from the court of Maximilian to Scotland, and been appointed minister of Holyrood. Having attained a proficiency in classical learning greater than was usual even in that age, Craig was admitted advocate in February 1563, and in the following year received the appointment of justice-depute, whose duty it was, as the representative of the justice-general, then an hereditary office in the family of Argyll, held by Archibald, fifth earl, to preside in the trial of criminal causes. In the exercise of this office Craig held the courts on 1 April 1566 in which Thomas Scott, sheriff-depute of Perth, and Henry Yaire, a priest, servant of Lord Ruthven, were condemned to death for a subordinate part in the murder of Rizzio and treasonable seizure of the queen's person, for which the principal actors were pardoned at the intercession of Darnley; and less than two years later (3 Jan. 1568) he presided over the trial of Stephen Dalgleish, Hay, and Powrie, who met the same fate for their share in the murder of Darnley. He was saved from the ignominy of presiding at the mock assize which acquitted Bothwell, by Argyll in person undertaking that duty. About this time Craig married Helen, younger daughter of Robert Heriot of Lumphoy or Lymphoy, an estate in the parish of Currie in Midlothian. His zeal for law and letters probably kept Craig, who continued through life a diligent student, free from the political intrigues of this corrupt age. On the birth of James VI he published his first work, the 'Genethliacon,' a copy of complimentary verses on that event. In 1573, when he was appointed sheriff-depute of Edinburgh, Craig appears to have resigned his office as criminal judge. Neither appointment was inconsistent with practice at the bar, of which Craig enjoyed a fair share. We find him acting as counsel for the king along with the king's advocate in 1592. Three years previously he was one of a committee appointed to regulate the curriculum of the high school of Edinburgh, whose labours resulted in a very learned report (McCrie, *Life of Melville*), and he also served in the assembly of 1589. A considerable portion of his time must have been devoted to preparations for his legal treatises of the 'Jus Feudale,' published in 1603; a 'Treatise on the Right of James VI to the Succession to the English Crown,' and, a 'Treatise on the Union,' written between 1603 and 1605, and a tract, 'De Hominio,' in 1605. The only one of these published during his life was the 'Jus Feudale,' a very learned work, written with the avowed object of showing that the feudal law of Scotland and England had a common origin. It was republished by Mencken at Leipzig in 1716, and for the third time by James Baillie at Edinburgh in 1732, with a preface by Robert Burnet (afterwards Lord Crimond), a Scottish judge, and a brief life of Craig by James Baillie. No clearer statement of the feudal system in its legal relations exists, and it is still, although the law has been much altered, the standard authority in Scotland as to the original condition of its feudal land-law, probably as complete as that of any European country. The 'Treatise on the Succession,' like all Craig's works written in Latin, was published in an English translation after his death by James Gatherer in 1703. It was an answer to the jesuit Parsons, who, under the assumed name of Doleman, had written in 1594 'A Conference about the next Succession to the Crown of England,' in which he supported the title of the infanta of Spain. This work was rigidly suppressed, and the possession of a copy declared high treason. The peaceful accession of James I was probably deemed by Craig to render the publication of his own work unnecessary. The 'De Hominio,' designed to prove that Scotland had never done homage to England, was also translated after his death by George Redpath and published by Thomas Rymer. The 'Treatise on the Union' is still in manuscript (*Adv. Lib.* A. 2, 12).

Besides his graver labours Craig found time for occasional efforts in Latin verse, and his poems, the 'Paræneticon of James VI leaving Scotland,' the 'Propempticon to Prince Henry' on the same occasion, and the 'ΣΤΕΦΑΝΟΦΟΡΙΑ on the Coronation,' originally printed in 1603 in Edinburgh, are included in the 'Delitiæ Poetarum Scotorum,' Amsterdam, 1637. While elegant and spirited, the verses of Craig do not raise him to the first rank of the Latin poets of his time, which was very prolific in this now forgotten department of letters. His fame as an author rests on the 'Jus Feudale.' Few events of note have been recorded in the later part of Craig's life. He went with James VI to England in 1603, and was present at his coronation. He is said through modesty to have declined the honour of knighthood, but the king directed that he should receive the title without the usual ceremony. In 1604

he was one of the commissioners appointed by the parliament of Scotland to treat of the union, and attended the conference at Westminster for that purpose in the autumn of that year. This was the occasion of his 'Treatise on the Union,' of which, as was natural in an official of James, he was a strenuous advocate. But his Scottish patriotism was moved by the disparagement to Scottish rights which he found prevalent amongst English lawyers, and a passage in the then recently published 'Chronicle of Holinshed,' asserting that homage had been rendered to England from the earliest times, induced him to write his 'Treatise on the Homage Question.' In this controversy, again renewed at the time of the union under Queen Anne by Attwood, who was censured by Anderson, and which has now passed out of the hands of lawyers into those of historians (Mr. Freeman and Mr. E. W. Robertson being the champions of their respective countries), the verdict of impartial writers has been given in favour of the contention of Craig, that nothing of the substance of homage was paid by the smaller kingdom, except for the short periods that it was treated as a conquered country by William the Conqueror, Rufus, and Edward I.

On his return to Scotland Craig was nominated one of the Inner House advocates, a distinction attempted, but soon afterwards abandoned, in order to secure the attendance of the leaders of the bar on the full court. His name is second in the list, which probably indicates his eminence in the profession. Next year he was one of six advocates named by the court as qualified to fill a vacancy on the bench. Shortly before his death he was made advocate for the church, and as such defended in 1606 the six ministers who were tried for treason for holding a general assembly at Aberdeen. In 1607 he was appointed by parliament member of a commission for settling a Latin grammar for use in schools. That of Alexander Hume was selected, but failed to secure universal acceptance. This seems to have been Craig's last public duty. He died on 26 Feb. 1608 in his seventieth year, leaving three sons and two daughters. His eldest son, Lewis, became a judge, and founded the family of Riccarton. The second, James Craig of Castle Craig and Craigston, was killed in the Irish war in 1641. He died unmarried, and the third son, Thomas, physician to James VI and Charles I, succeeded to the Aberdeenshire estates. His eldest daughter, Margaret, married Sir Alexander Gibson of Durie, a distinguished Scottish judge; and the second, Elizabeth, became the wife of James Johnston, whose son, Sir Archibald of Warriston, judge of the court of session, was the celebrated leader of the presbyterians. Sir Thomas Craig's granddaughter, Rachel Johnston of Warriston, married Robert Burnet, afterwards Lord Crimond, the father of Bishop Burnet, the historian. This number of notable descendants, especially of men of mark in his own profession, was a frequent occurrence in the Scottish noblesse de robe, of which the families of Hope, the lord advocate of Charles I, and of Lord Stair are other examples. It was in part due to hereditary talent, but persons of good family connection got a favourable start in their profession then, as those of good business connection now. The character of Craig is a pleasing one and contrasts with that of many of his contemporaries at the bar, of whom Mr. Tytler has given sketches in his 'Life of Craig.' A protestant by conviction, he was free from the intolerance which disgraced many of his presbyterian contemporaries. His father had remained a catholic till old age, when his late conversion is said to have given much satisfaction to his son. He was a zealous student of the law, fond of it for its own sake, and not over-anxious about the emoluments or honours it conferred upon its practitioners. To this was probably due the fact that he never reached the bench of the supreme court, to which he had a fair claim. It is related of his son, Sir Lewis, who is separately noticed, that he always uncovered when his father was pleading before him, although the judges then usually wore their hats on the bench. His hospitality and charity are specially noted by those who have sketched his life. 'He kept an open table,' says one of them, 'not only for the poorer sort of gentlemen and all good men, especially for all men of learning, but even many of the best rank of the kingdom were entertained at it, he thereby lessening his own estate, or at least making but a small addition to it, for he was not desirous of riches.' Yet he seems to have been able to leave competent fortunes to his sons [see CRAIG, SIR LEWIS; CRAIG, JOHN, *d.* 1620]. He had inherited, besides landed property, some houses in the High Street, opposite St. Giles's Church, which he rebuilt of square stones, with a large pavement of the same stones towards the street, which continued for long after to go by the name of Craig's plain stones, an anecdote trifling in itself, but marking that the Edinburgh of his day was recovering from the effects of Hertford's raid.

His writings had all a public and patriotic end—to promote the union and to allay the jealousies of both nations. In that respect

he may be compared to Bacon, who laboured earnestly for the same object from the English side. For this service his name deserves to be remembered when his legal treatise has passed into the early oblivion which awaits almost all works on positive law.

[Craig's Works, of which the editions are noted in the text; Baillie's Life prefixed to the Jus Feudale; Tytler's Life of Craig, with sketches of his contemporaries.] Æ. M.

CRAIG, WILLIAM, Lord Craig (1745-1813), Scottish judge, son of William Craig, minister, of Glasgow, was born in 1745. He studied at the university of Edinburgh, and was admitted advocate at the Scottish bar in 1768. Partly on account of his literary tastes and pursuits, his success was not so rapid as his undoubted legal talents might have guaranteed. In 1784 he discharged the duties of advocate-depute along with Blair and Abercromby, and in 1787 he became sheriff-depute of Ayrshire. In 1792 he was on the death of Hailes raised to the bench with the title of Lord Craig. Though he had not held a prominent position at the bar, his elevation was fully justified by his career as a judge. In 1795 he succeeded Lord Henderland as a judge of the court of justiciary, an office which he held till 1812. He retained his office in the civil court till his death 8 July 1813. Craig along with other advocates was a member of a literary society called the 'Tabernacle,' who met at a tavern for reading essays and discussing literary matters. On the suggestion of Craig they ultimately resolved to start a periodical for the publication of the essays, upon which they changed the name of the society to the 'Mirror Club,' the name given to the publication being the 'Mirror.' It was published by Creech on Tuesdays and Saturdays, the first number appearing on Saturday 23 Jan. 1779, and the last (the 110th) 27 May 1780. Next to those of Henry Mackenzie the contributions of Craig were the most numerous, among them being a paper in the thirty-sixth number which assisted to bring into notice the poems of Michael Bruce. Craig was also a frequent contributor to the 'Lounger' (1785-6-7), published by the same club. He was cousin-german of Mrs. Maclehose, the 'Clarinda' of Robert Burns. Both publicly and privately he was held in much esteem for his upright conduct and courteous manners.

[Kay's Original Portraits, i. 302-4, ii. 380; Haig and Brunton's Senators of the College of Justice, 540-1; Chambers's Dictionary of Eminent Scotsmen (Thomson), i. 392-3.] T. F. H.

CRAIG, Sir WILLIAM GIBSON (1797-1878), lord clerk register of Scotland, eldest son of (Sir) James Gibson, afterwards Craig, of Riccarton [q. v.], was born 2 Aug. 1797. Educated at the high school of Edinburgh and a private school in Yorkshire, he was called to the Scotch bar in 1820. His connection with the bar was, however, merely nominal, and after devoting some time to foreign travel he, on his return to Edinburgh, turned his attention to politics and other matters of public interest. In 1834 he served on the commission to inquire into church property in Ireland, and in the same year as a member of the general assembly of the church of Scotland he gave his support to the Veto Act. In 1835 he contested Midlothian with Sir George Clerk, but was defeated by a small majority. He was, however, returned in 1837, and in 1841 he exchanged the representation of the county for that of the city of Edinburgh, his parliamentary career closing in 1852. From 1846 to 1852 he was a lord of the treasury. In the public affairs of Edinburgh he took an active and prominent interest. He was one of the chief originators of the scheme for the water supply of the city, and through his suggestion a commission was in 1847 appointed to inquire into the whole subject of art in Scotland, the result of its deliberations being the erection of the National Gallery. In 1854 he was appointed to one of the unpaid seats at the board of supervision for the administration of the poor law in Scotland. In 1862 he was appointed lord clerk register and keeper of the signet in Scotland, and the following year was elected a privy councillor. The duties of lord clerk register he discharged gratuitously, in order that meanwhile inquiry might be made in regard to the functions of the office, the result being that in 1871 the salary of 1,200*l.* attached to it was restored. It is to his initiative that we owe the publication of the documents of the register office, of the privy council records, and of an index volume to Thomson's 'Acts of Parliament.' Craig was a leading member of the Highland and Agricultural Society, of which he became treasurer in succession to Sir Thomas Dick Lauder. In 1848 he became deputy-lieutenant of Midlothian. Privately he secured general and cordial esteem, and was well known for his hospitality to men distinguished in politics or letters. He died 12 March 1878. By his wife, a daughter of Mr. H. Vivian, M.P., he left issue, and he was succeeded in the baronetcy by his eldest son.

[Men of the Time, 9th ed.; Scotsman, 13 March 1878.] T. F. H.

CRAIG, WILLIAM MARSHALL (*fl.* 1788-1828), miniature-painter, said to have been a nephew of Thomson the poet,

was drawing-master to the Princess Charlotte of Wales, miniature-painter to the Duke and Duchess of York, and painter in water-colours to the queen. As early as 1788 he exhibited at the Academy, being then resident at Manchester. In 1791, when he exhibited two figure subjects, he had settled in London. In 1792 he began as a miniature and portrait painter, varying this by occasional rustic figures, landscapes, and domestic scenes. He contributed little after 1821, and ceased to exhibit altogether in 1827. In the first quarter of the century he shared with John Thurston the honour of being one of the principal designers on wood; and many of the popular engravers, e.g. Thomas Bewick, Luke Clennell, Charlton Nesbit, Branston, Austin, Hole, Lee, worked for a commonplace 'Scripture Illustrated,' which he put forth in 1806. He also made most of the drawings for the 'British Gallery of Pictures,' 1808. Others of his works were 'An Essay on the Study of Nature in drawing Landscape,' 1793; 'The Complete Instructor in Drawing,' 1806; 'The Sports of Love,' in six etchings [1807]; 'Lectures on Drawing, Painting, and Engraving,' delivered at the Royal Institution, 1821; and 'A Wreath for the Brow of Youth,' a book said to have been written for the Princess Charlotte. From the second edition of this, which is dated 1828, Craig must have been living in that year. He was a mediocre illustrator; but his water-colours are skilfully finished. One of them, 'The Wounded Soldier,' is included in the William Smith gift to the South Kensington Museum.

[Redgrave; Craig's Works.] A. D.

CRAIGHALL, Lord (1605?–1654), Scottish judge. [See Hope, Sir John.]

CRAIGIE, DAVID, M.D. (1793–1866), physician, was born near Edinburgh in June 1793, took his medical degree in the university of that city in 1816, and in 1832 became a fellow of the Edinburgh College of Physicians. He never attained great practice, nor was famous as a teacher; but in 1828 he published a bulky 'Elements of General and Pathological Anatomy,' of which a second edition appeared in 1848. It shows that he had read many books on morbid anatomy, and the facts repeated from previous writers are often well arranged by Craigie, so that it may occasionally be looked into with profit. The part describing morbid changes in the pancreas is perhaps the best section of the book. Its defect is a want of that familiarity with diseased structures which can only be acquired in the post-mortem room. Craigie was physician to the Edinburgh Infirmary, but was more of a writer than of an observer. He became the owner of the 'Edinburgh Medical and Surgical Journal,' and edited his periodical himself. He wrote 'Elements of Anatomy, General, Special, and Comparative,' and in 1836 'Elements of the Practice of Physic.' He helped Thomson in his 'Life of Cullen,' and published thirty separate papers on medical subjects. They remain almost unread, but are at least evidence of his persevering labour through many years; his 'Morbid Anatomy' is his best work, and deserves a place in every large medical library. After a long period of failing health he died in September 1866.

[Lancet, 8 Sept. 1866; Works.] N. M.

CRAIGIE, ROBERT (1685–1760), judge, son of Lawrence Craigie of Kilgraston, born in 1685, became advocate 1709, lord advocate 1742, M.P. for Wick borough (1742–7), and president of the court of session 1754. He is described by Lord Woodhouslee as a lawyer of great acumen, knowledge, and industry. He died on 10 March 1760.
